HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Correction to: Quantitative trait loci for resistance to *Flavobacterium psychrophilum* in rainbow trout: effect of the mode of infection and evidence of epistatic interactions

Clémence Fraslin^{1,2}, Nicolas Dechamp¹, Maria Bernard³, Francine Krieg¹, Caroline Hervet^{1,6}, René Guyomard¹, Diane Esquerre⁴, Johanna Barbieri⁴, Claire Kuchly⁴, Eric Duchaud⁵, Pierre Boudinot⁵, Tatiana Rochat⁵, Jean-François Bernardet⁵ and Edwige Quillet^{1*}

Correction to: Fraslin et al. *Genet Sel Evol* (2018) 50:60
<https://doi.org/10.1186/s12711-018-0431-9>

After publication of this work [1], we noted that there was an error in Table 3 Line 4: ^bOmy2_{Omy3} should be ^bOmy21_{Omy3}.

The correct Table 3 is included here.

The table presents chromosome-wide or genome-wide significant QTL detected for STATUS using model M2; Reciprocal interactions could be tested only for QTL detected in the first STATUS analysis (model M1); LRTmax = maximum of likelihood ratio test; Position in the genetic map in centimorgans (cM); CI = confidence interval; Chromosome-wide significant = * $P \leq 0.01$; Genome-wide significant = ** $P \leq 0.05$ or *** $P \leq 0.01$; P values for fixed effect and interaction corrected with Benjamini–Hochberg method; Non-significant = NS; *P value ≤ 0.05 ; ***P value ≤ 0.001

^a The reciprocal interaction could not be tested as a new QTL (Omy29.2_{Omy3}-QTL) was detected with the reciprocal model

^{b,d} Reciprocal models for QTL pairs

^c The QTL in the reciprocal model (Omy2_{Omy3}-QTL) was only suggestive ($P \leq 0.05$) at the chromosome-wide level
