HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Do Tree-related Microhabitats and associated biodiversity respond to forest dieback?

A case study in French mountain Silver Fir forests

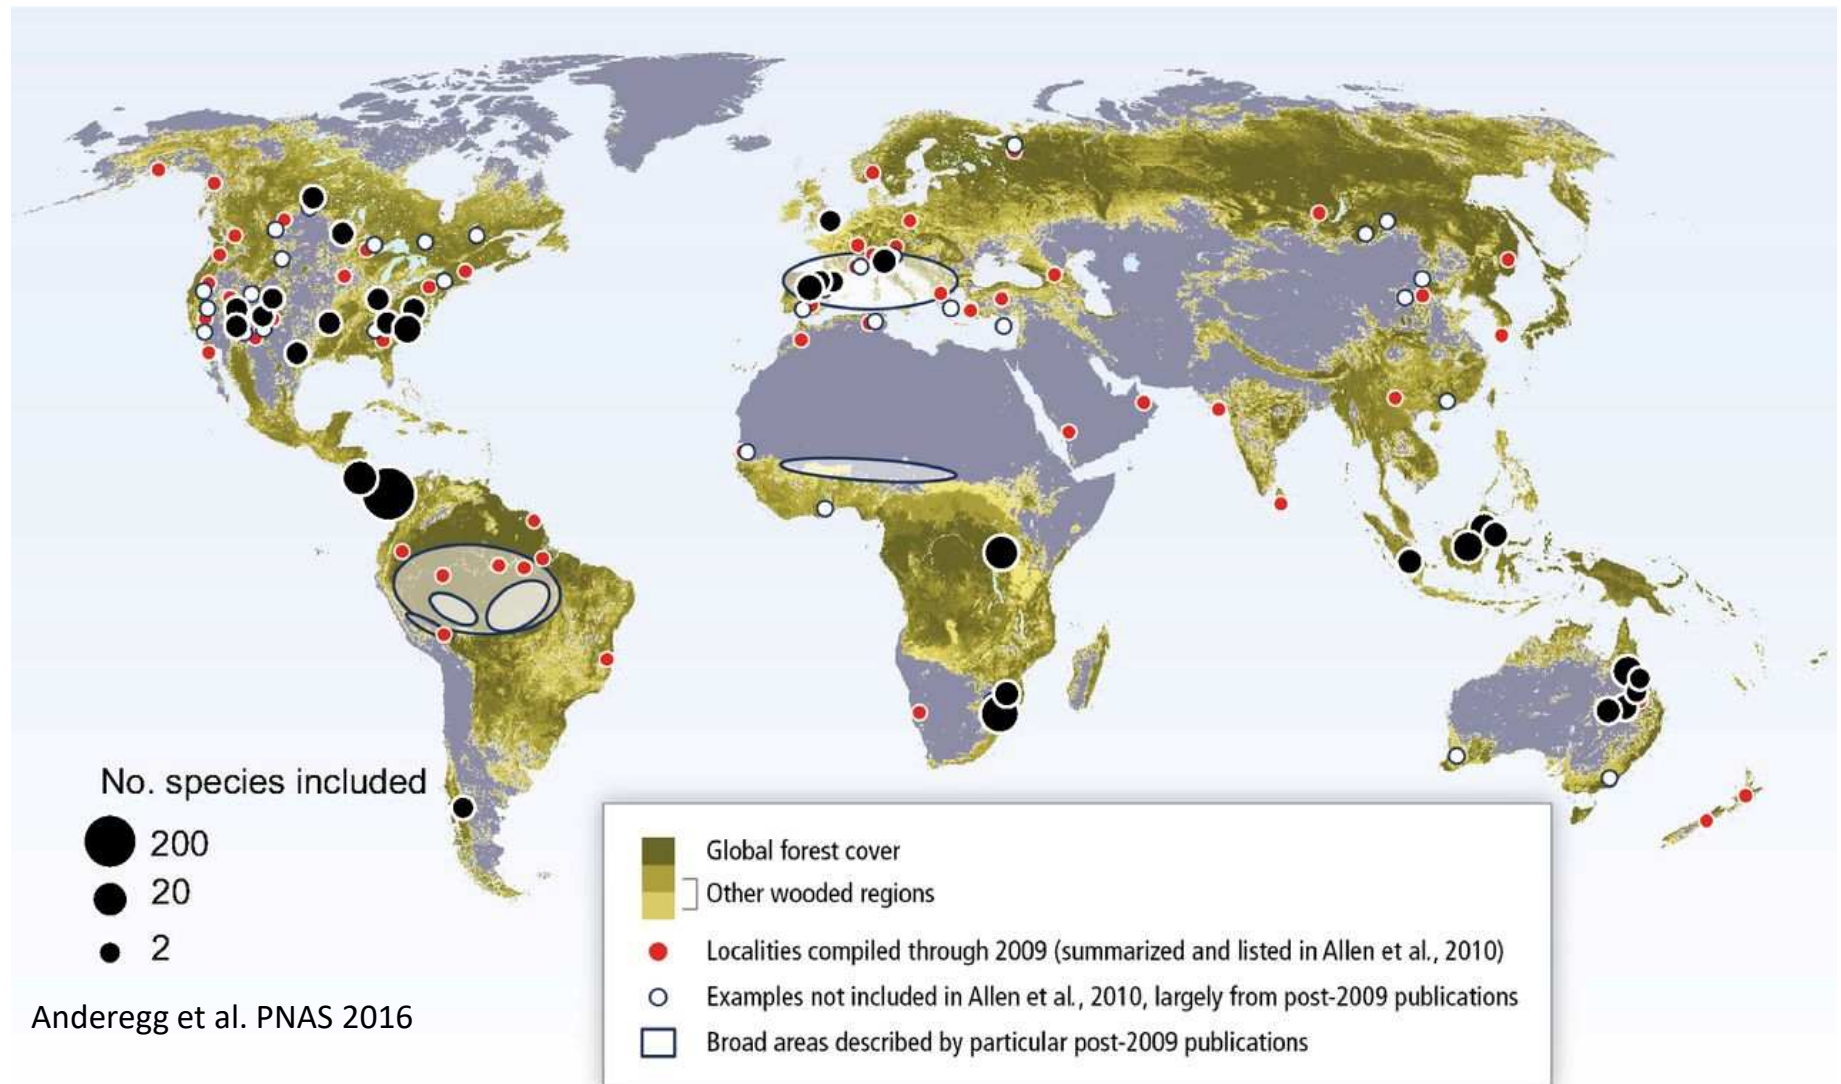

BOUGET, C., LARRIEU, L., BURNEL, L., CHERET, V., LADET, S., LOPEZ-VAAMONDE, C., MOLIARD, C., MOLINA, J., PARMAN, G., SAJDAK, G., SIRE, L., WILLM, J.

Silver fir, a model tree species for dieback studies in southwestern Europe

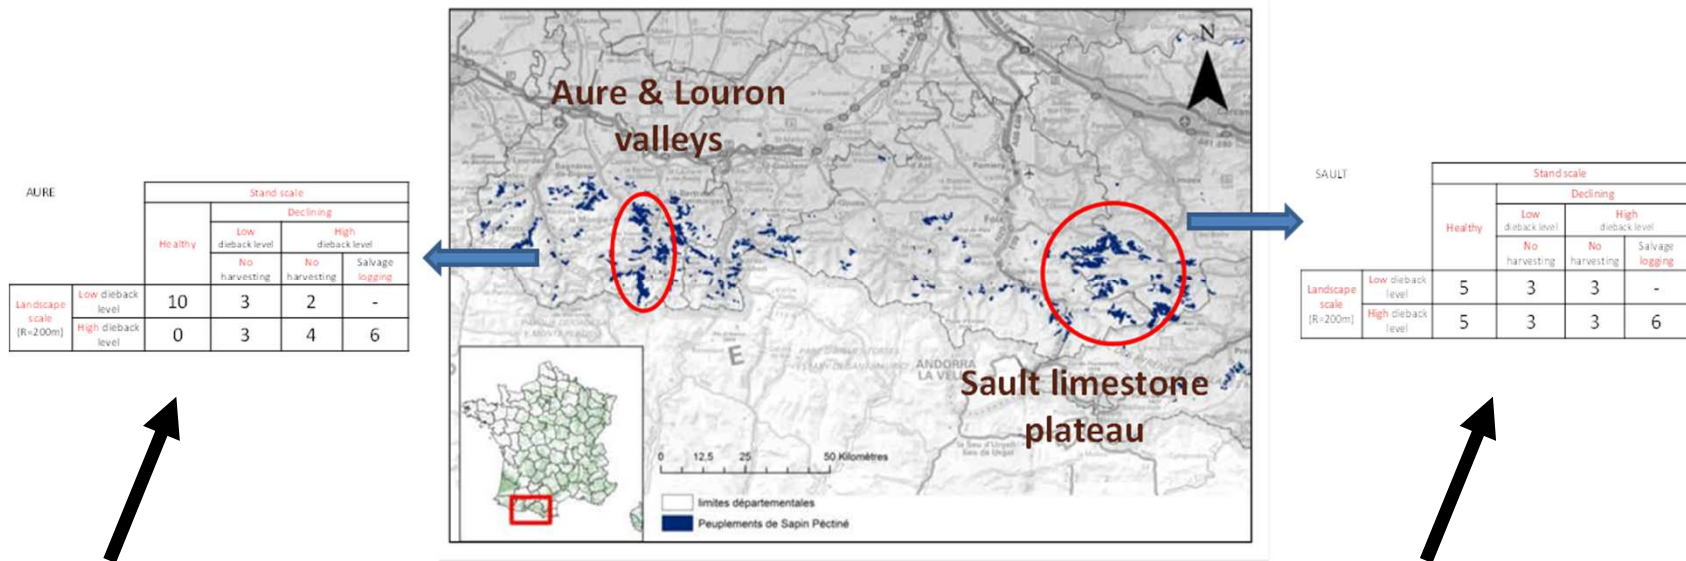

Silver fir defoliation at its Southernmost distribution limit
= drought sensitivity

Long-term climatic warming is a major driver of growth decline in silver fir

Severe periodical dieback crises since 1973

Sampling design

A **stratified** and almost **balanced** sampling design **replicated** in 2 French regions

56 plots

112 window-flight traps (beetles)

Landscape scale		Stand scale - 0.3 and 1ha			
		Healthy	Declining		
			Low dieback	High dieback	
54ha	Low dieback	15	6	5	-
	High dieback	5	6	7	12

Issues

Dieback (stand)

Salvage logging (stand)

Dieback (landscape)

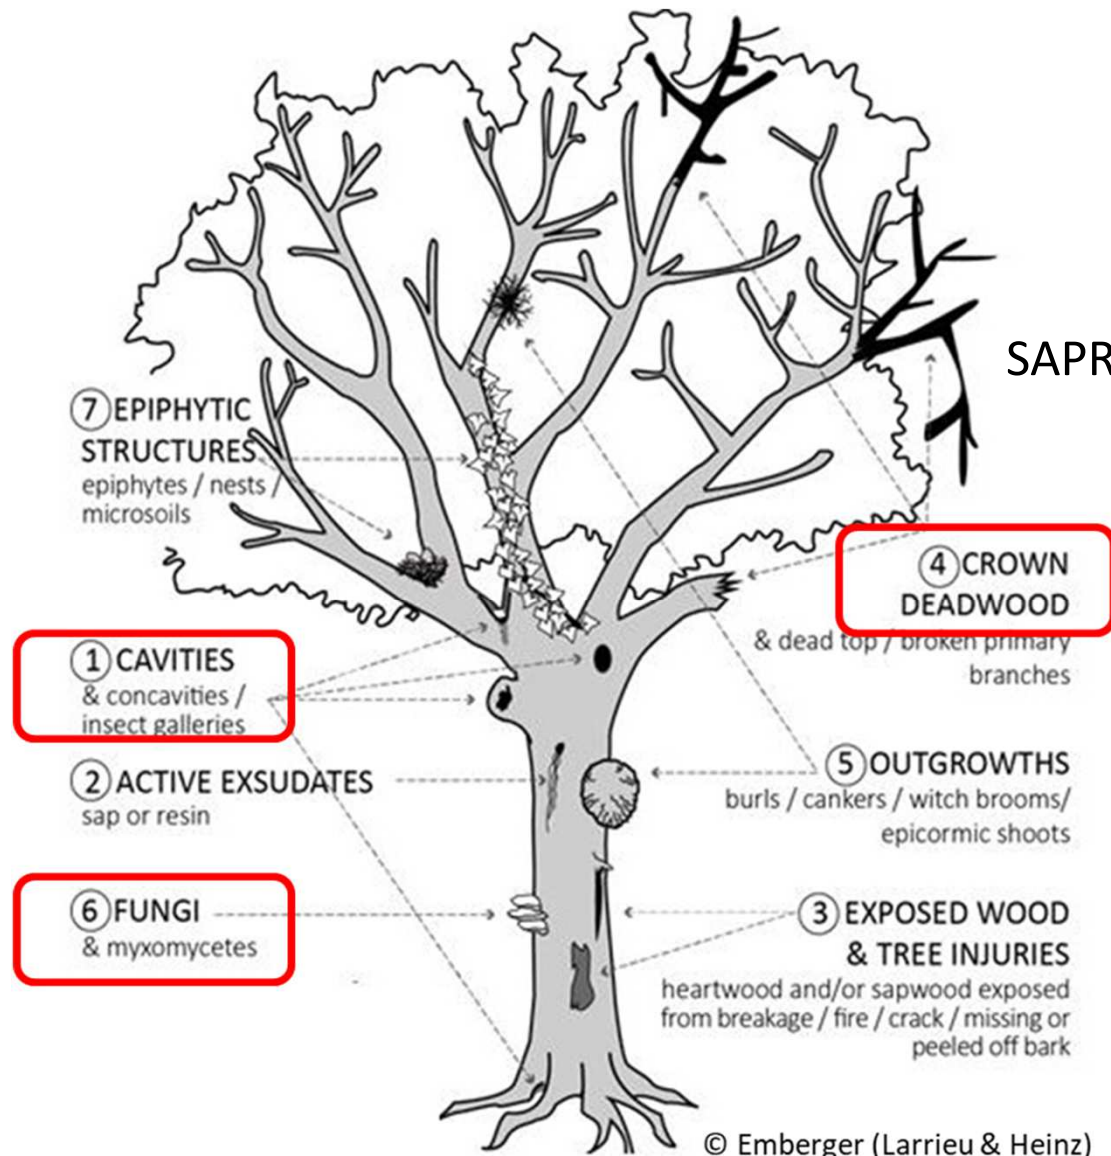

Focus on key TreMs / associated beetle guilds

CAVICOLOUS

FUNGICOLOUS

XYLOPHAGOUS
SAPROXYLOPHAGOUS

Key microhabitats rose in density in declining stands

1

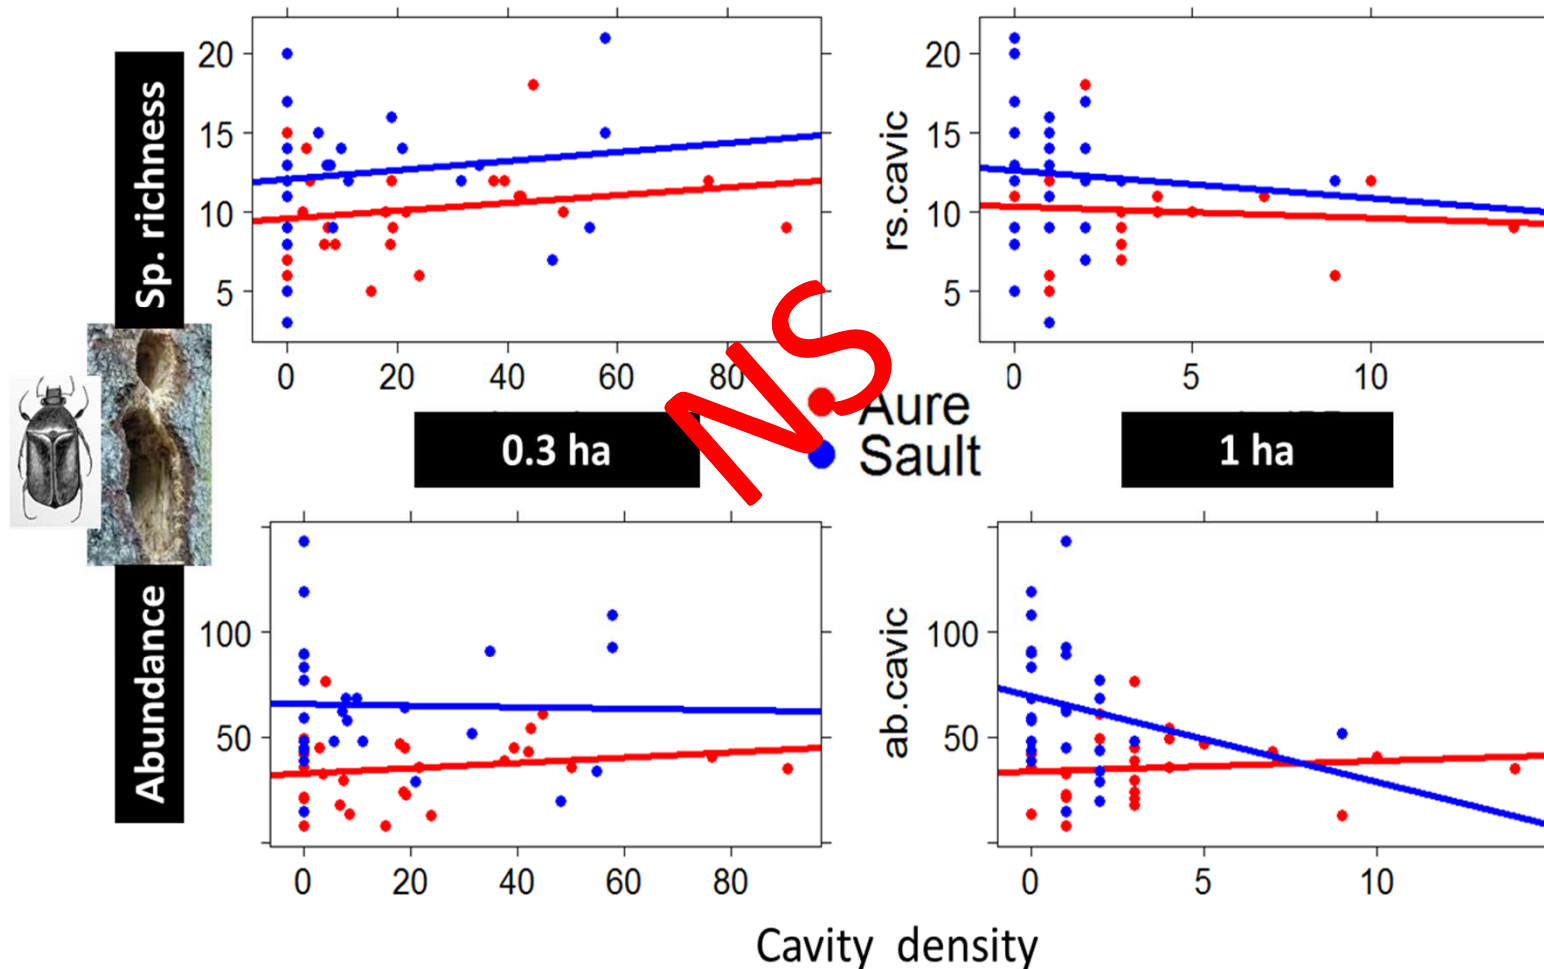

...the rise in dead wood density in declining stands was nonetheless stronger !

1

Dieback-induced increase in local cavity density does not foster abundance/diversity of cavicolous beetles

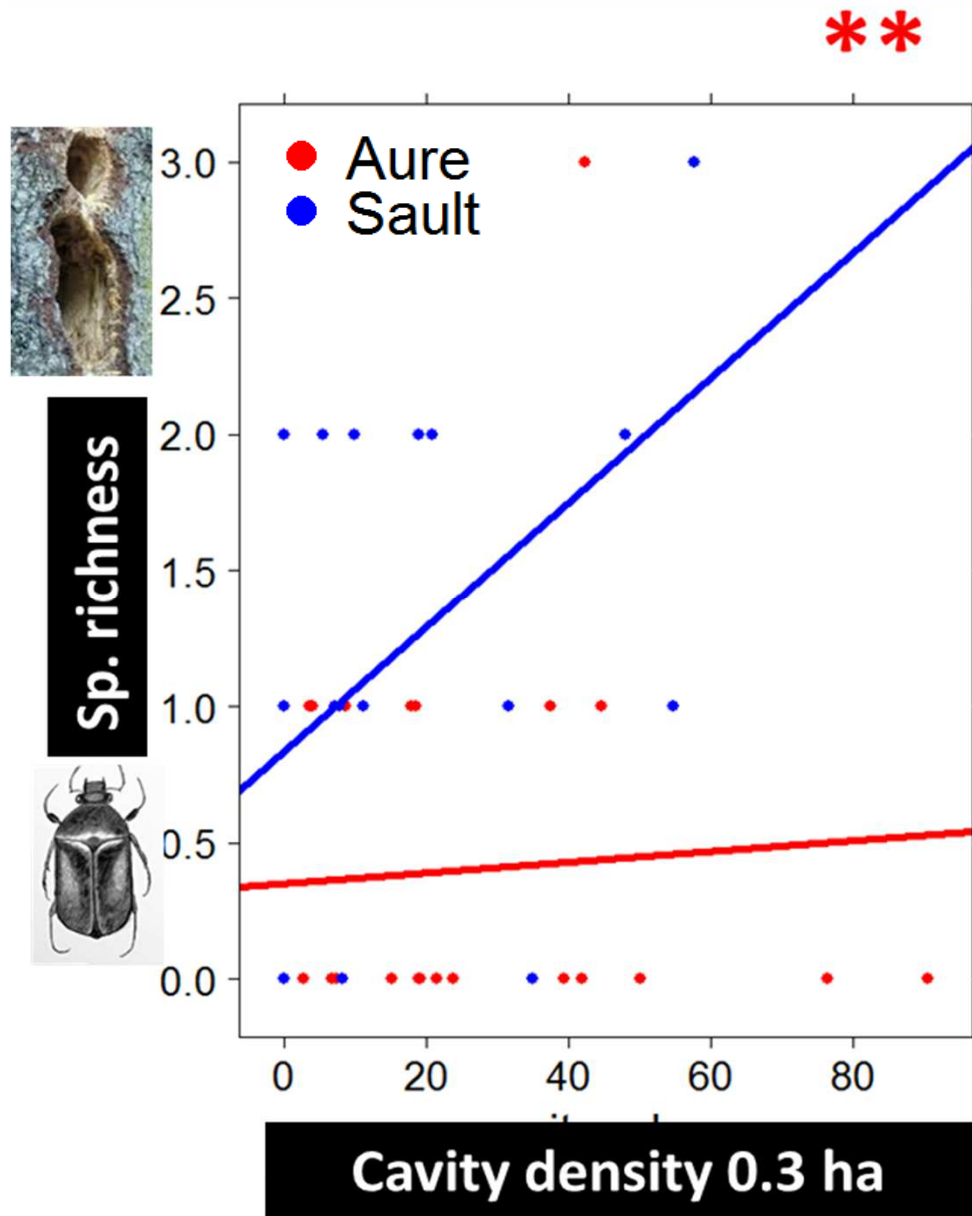

3

...the same for fungicolous beetles associated to polypores

...but dieback-induced increase in local cavity density does strengthen rare cavicolous species richness

3

iufro 2019
