# Forest perturbations due to climate change

# Dead wood management

- How to manage forest diebacks is a significant concern for forest stakeholders.
- What should be done with the large volumes of dying trees and fresh deadwood (salvage logging, sanitation salvage) ?

DOES SALVAGE LOGGING MAKE THINGS BETTER OR WORSE?

January 14, 2015 | Conservation This Week | 2 Comment

## Activists Protest Logging In Poland's Ancient Forest

# Global insects decline ?

## WHERE HAVE ALL THE INSECTS GONE?

Surveys in German nature reserves point to a dramatic decline in insect biomass. Key members of ecosystems may be slipping away

More than 75 percent decline over 27 years in total flying insect biomass in protected areas

Casper A. Hallmann<sup>1\*</sup>, Martin Sorg<sup>2</sup>, Eelke Jongejans<sup>1</sup>, Henk Siepel<sup>1</sup>, Nick Hofland<sup>1</sup>, Heinz Schwan<sup>2</sup>, Werner Stenmans<sup>2</sup>, Andreas Müller<sup>2</sup>, Hubert Sumser<sup>2</sup>, Thomas Hörren<sup>2</sup>, Dave Goulson<sup>3</sup>, Hans de Kroon<sup>1</sup>

Insectageddon: farming is more catastrophic than climate breakdown  
**George Monbiot**

Warning of 'ecological Armageddon' after dramatic plunge in insect numbers

Three-quarters of flying insects in nature reserves across Germany have vanished in 25 years, with serious implications for all life on Earth, scientists say

Insects

A giant insect ecosystem is collapsing due to humans. It's a catastrophe

# Thesis aims

- **Quantify the ecological impact of climate-induced forest die-offs and salvage logging on arthropod communities**
- **Develop biomonitoring pipelines for forest biodiversity**

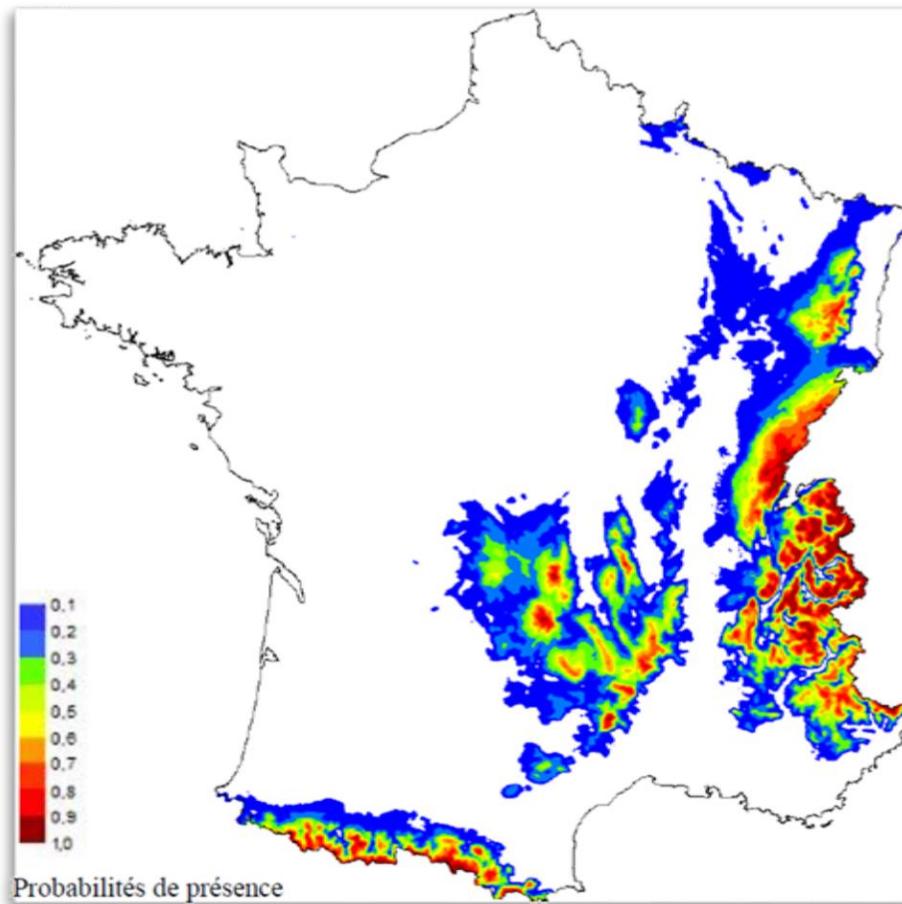

**This presentation will focus on:**

- What is the **species richness** in arthropods ?
- **Temporal turnover**
- Test DAMe bioinformatic pipeline

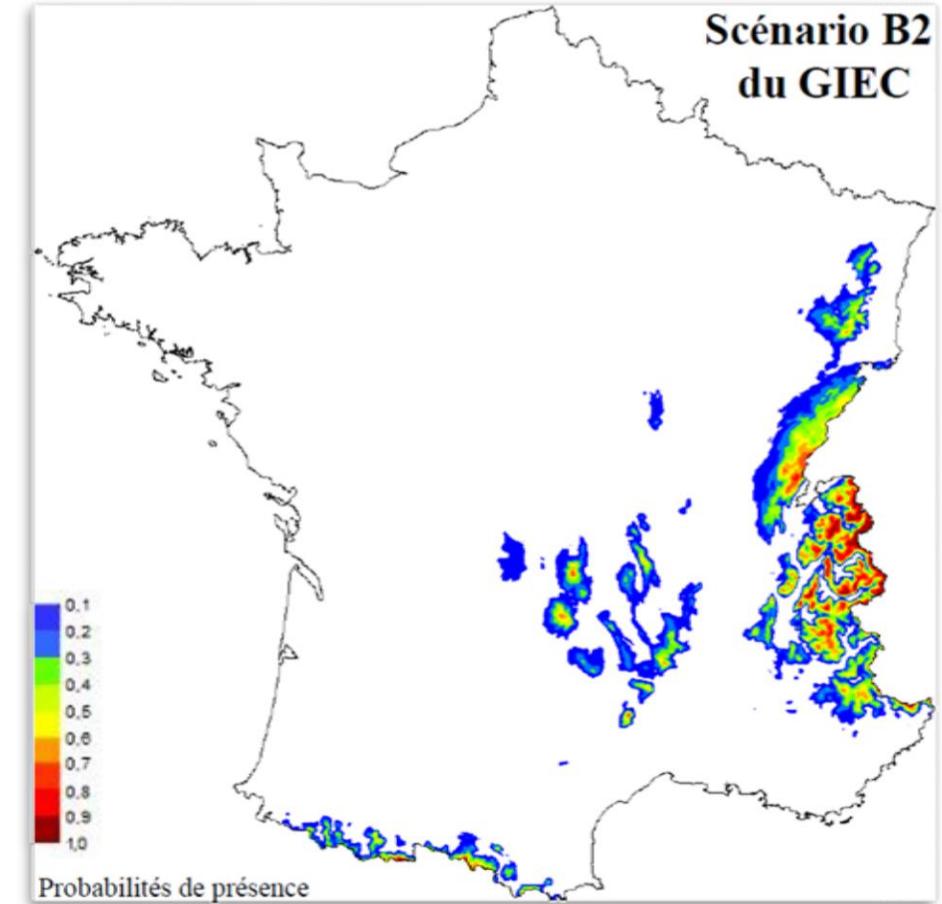

# Situation of Silver fir in France

actuel

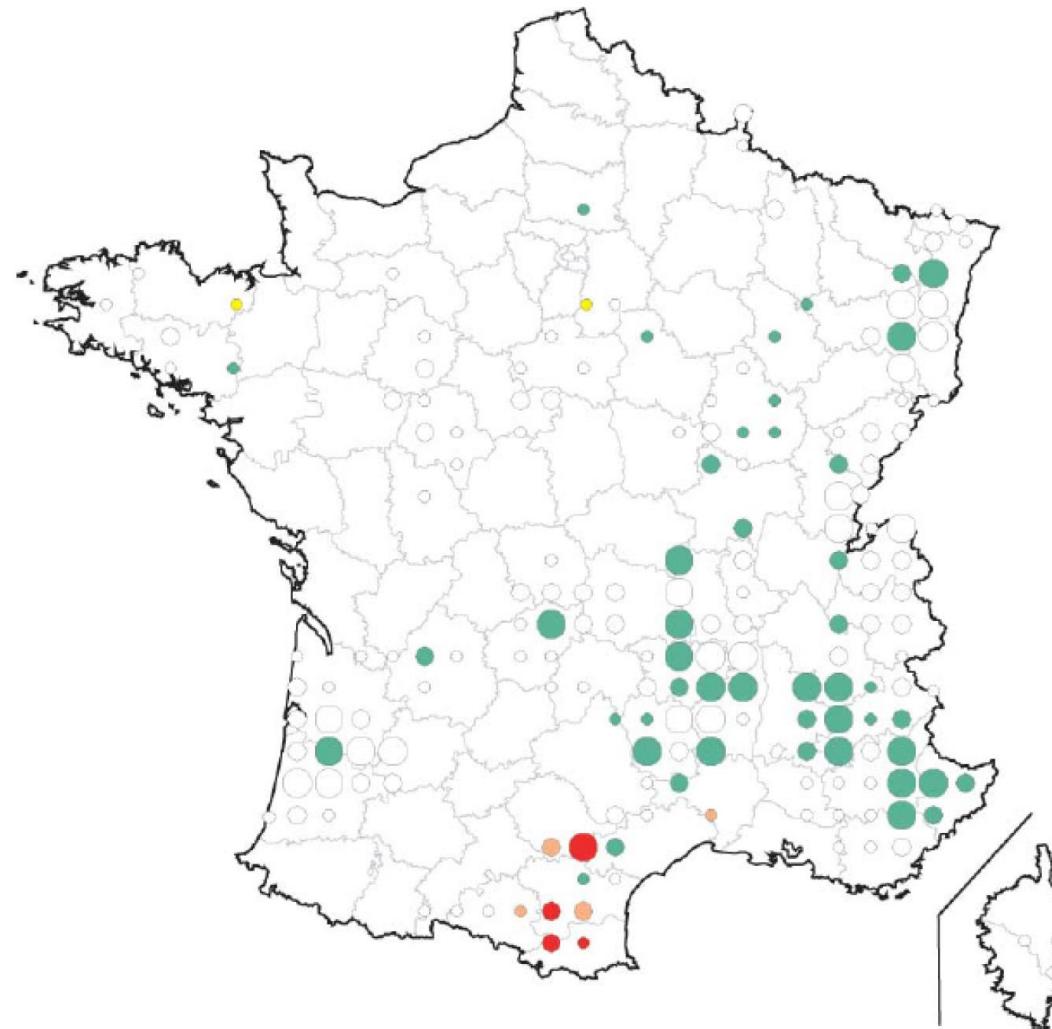

2100

Badeau et al., 2005

# Situation of Silver fir in France

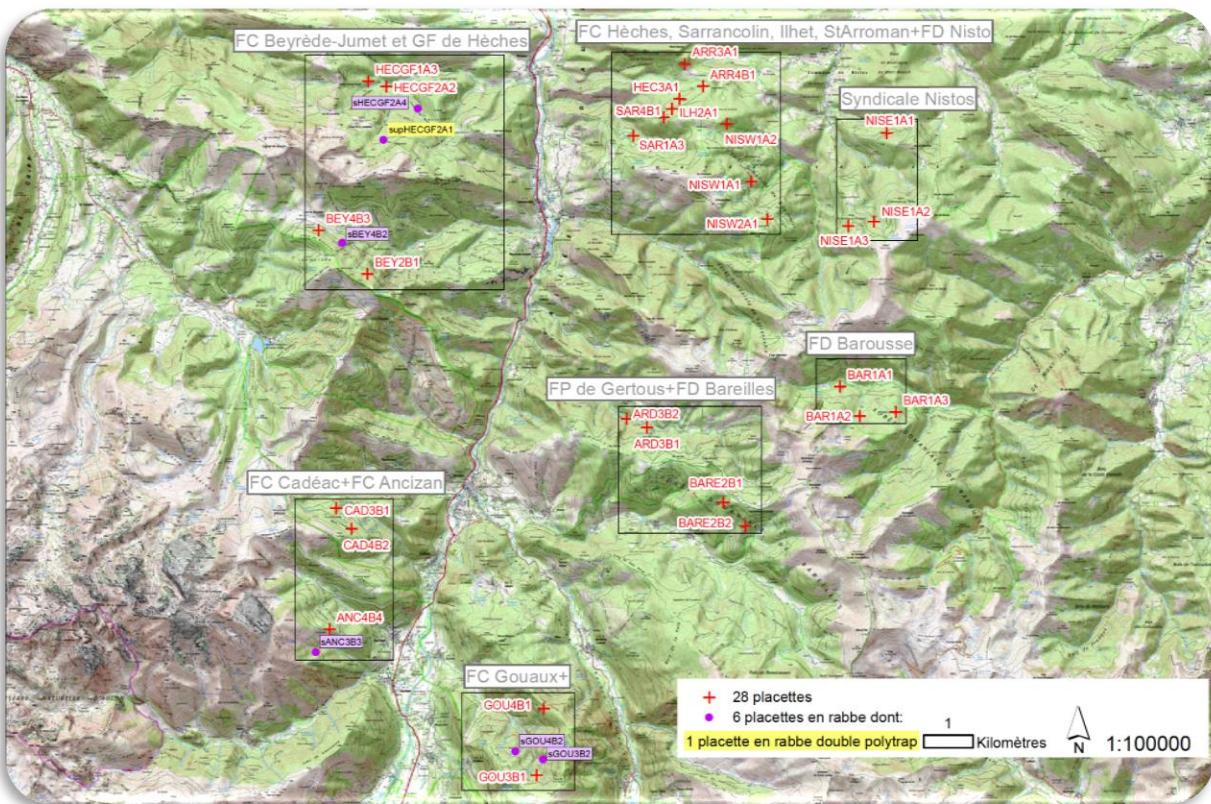

**Proportion of dominant trees  
with more than 25% of dead  
branches**

- More than 35% (Red)
- From 20 to 35% (Orange)
- From 10 to 20% (Yellow)
- Less than 10% (Teal)
- No tree in that case (White)

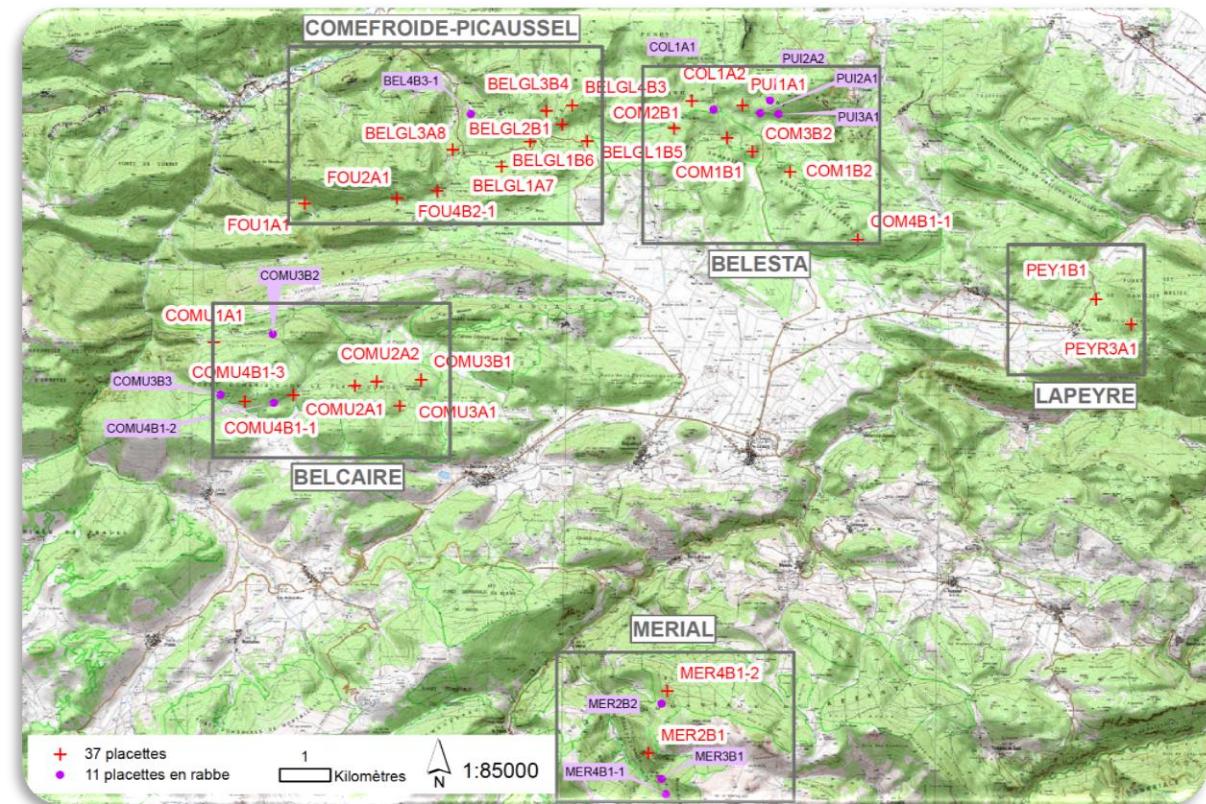

**Number of living and dominant  
trees**

- More than 100 (Large black dot)
- From 50 to 100 (Medium black dot)
- From 25 to 50 (Small black dot)

# Experimental design

Vallée d'Aure

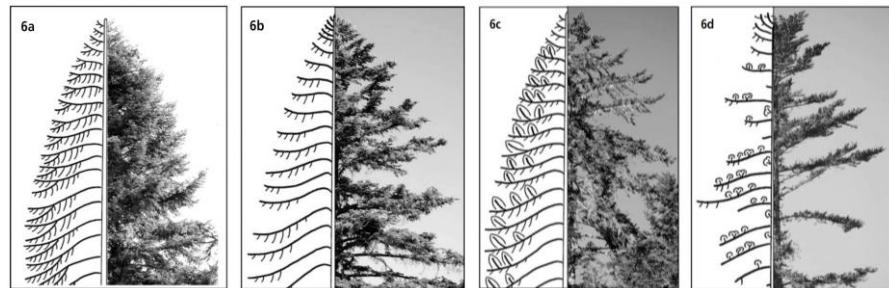

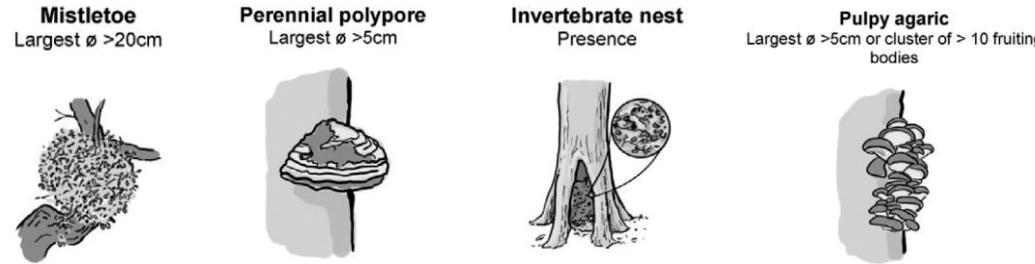

Pays de Sault

 $N = 57$  plots

Healthy plots | Low / high level diebacks | No harvesting / Salvage logging

# Ecological parameters

## Micro-dendrohabitat assessment

Larrieu et al., 2018

## ARCHI method (Assess health state of dominant trees)

Drénou et al., 2013

Stand structure, canopy openness, dead wood volume, large tree density...

# Biomonitoring using mass-trapping samples

- Sampling each month over 4 months (from May to September)
  - 224 Malaise samples
  - 448 Polytrap samples

# Bio-informatic pipeline

**a****b**

# Bio-informatic pipeline

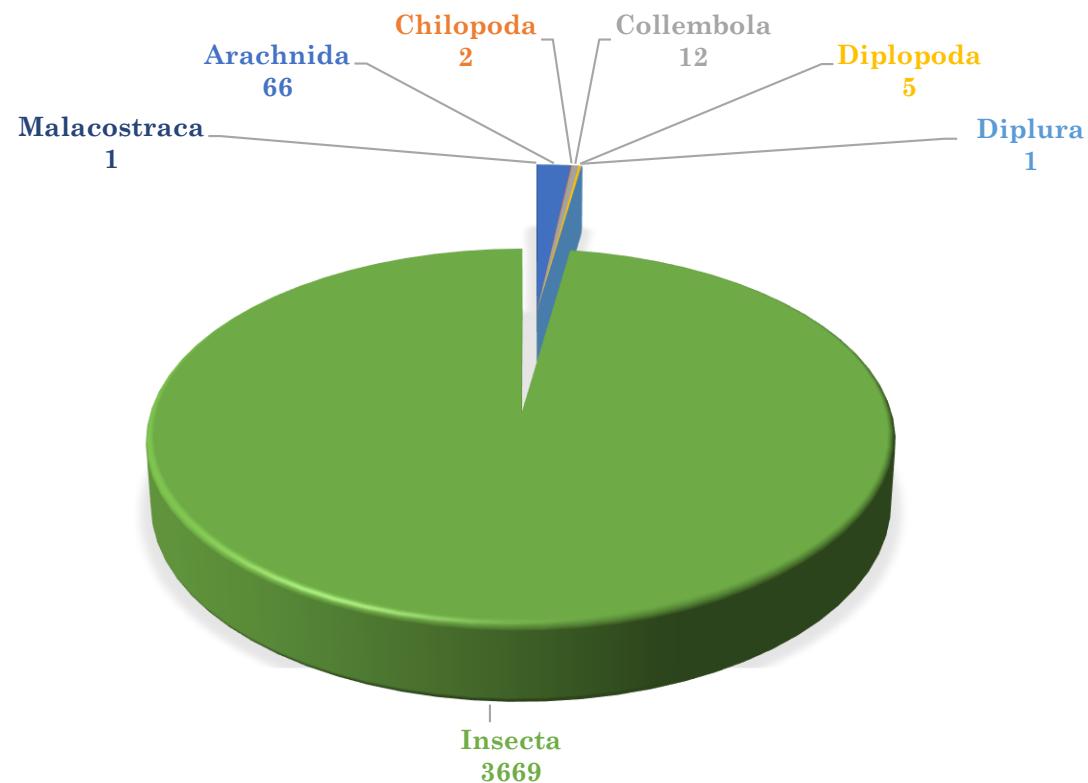

Minimum 4 reads in each of the 3 PCR replicates

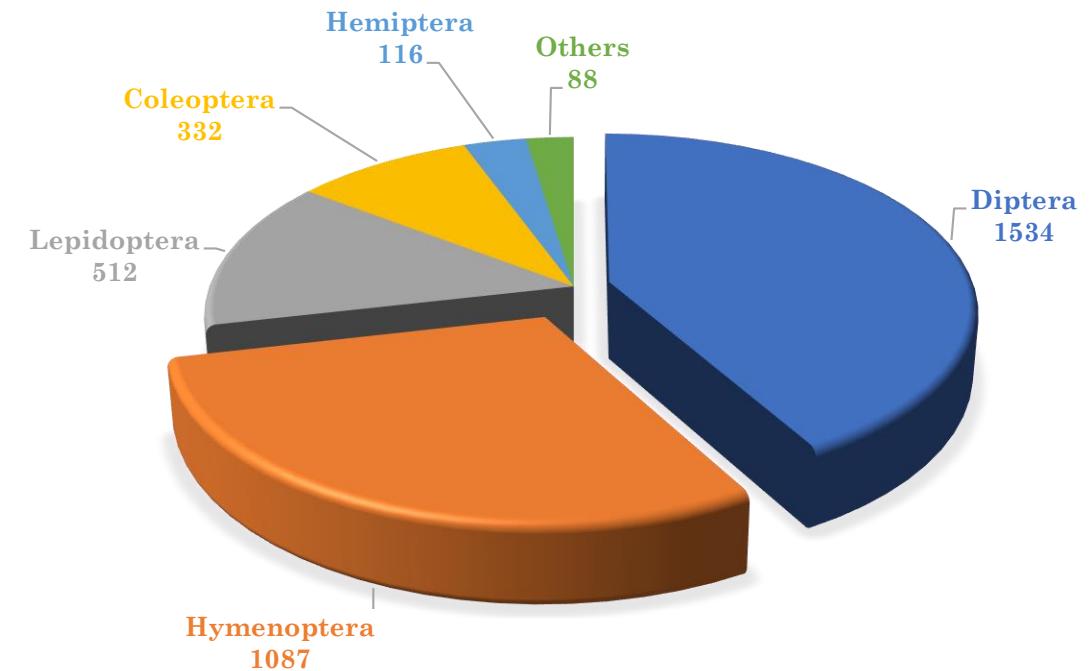

after Arthropod 80% filtering and sample selection

# Species richness for Malaise traps

3756 OTUs found

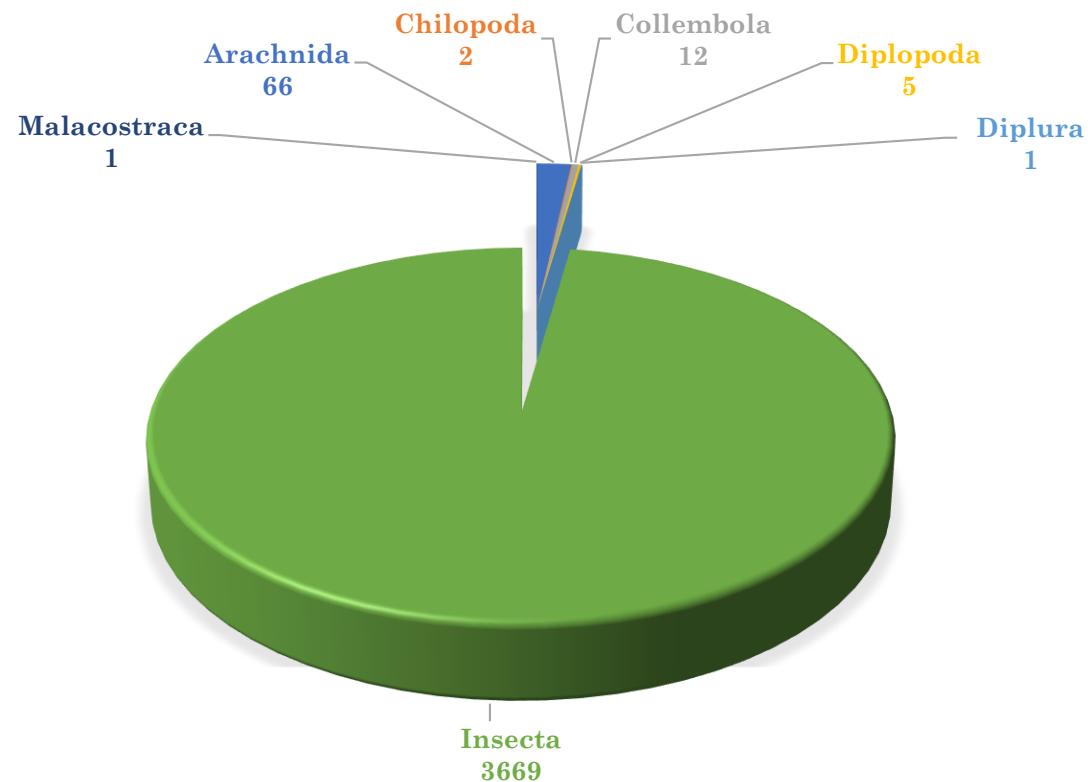

18 Insecta orders represented

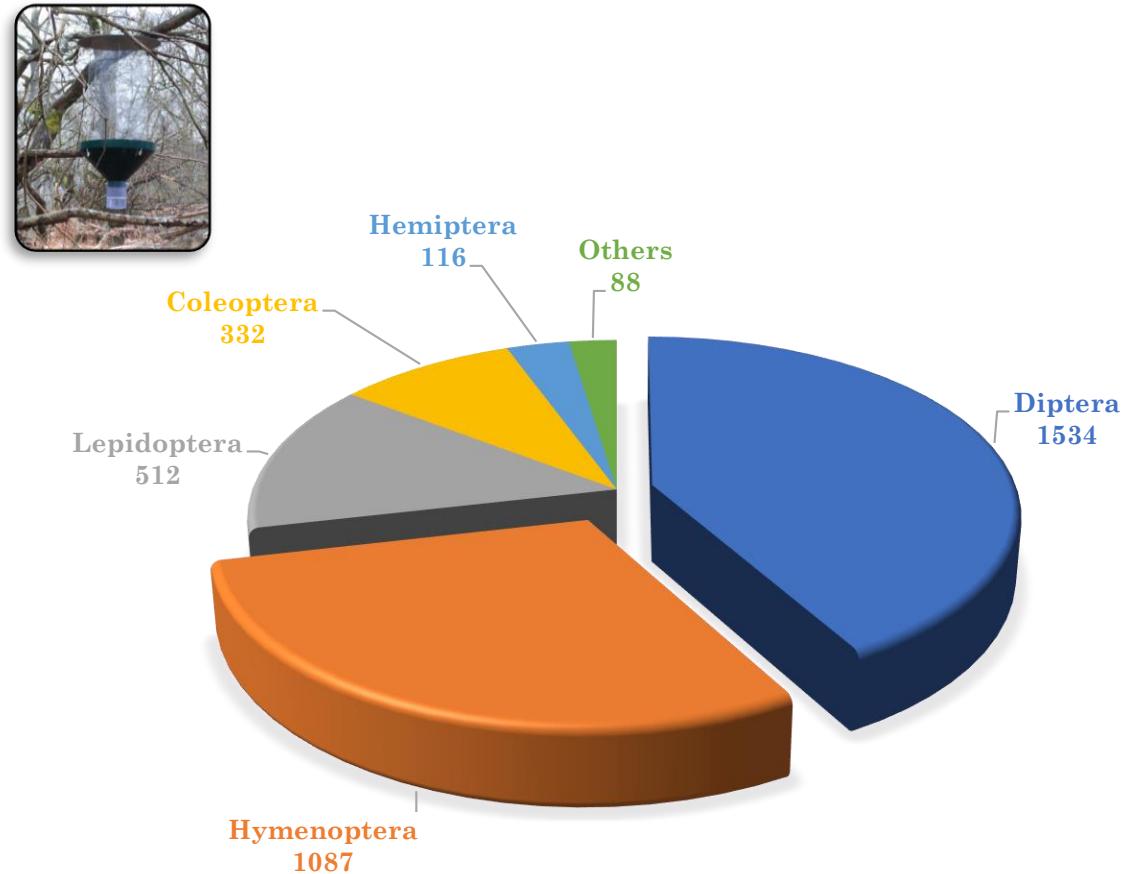

# Species richness for Malaise traps

3756 OTUs found

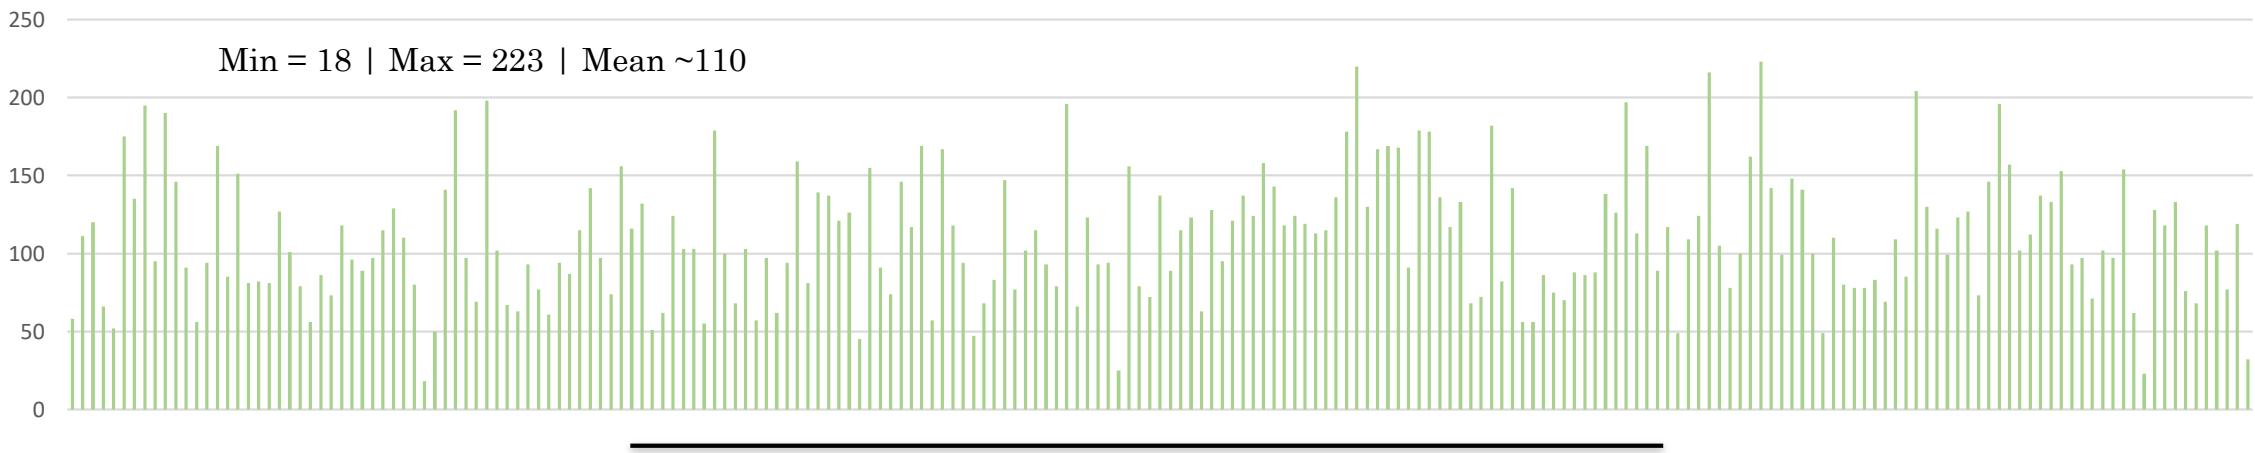

18 Insecta orders represented

# Trap composition

Number of OTUs per bulk sample

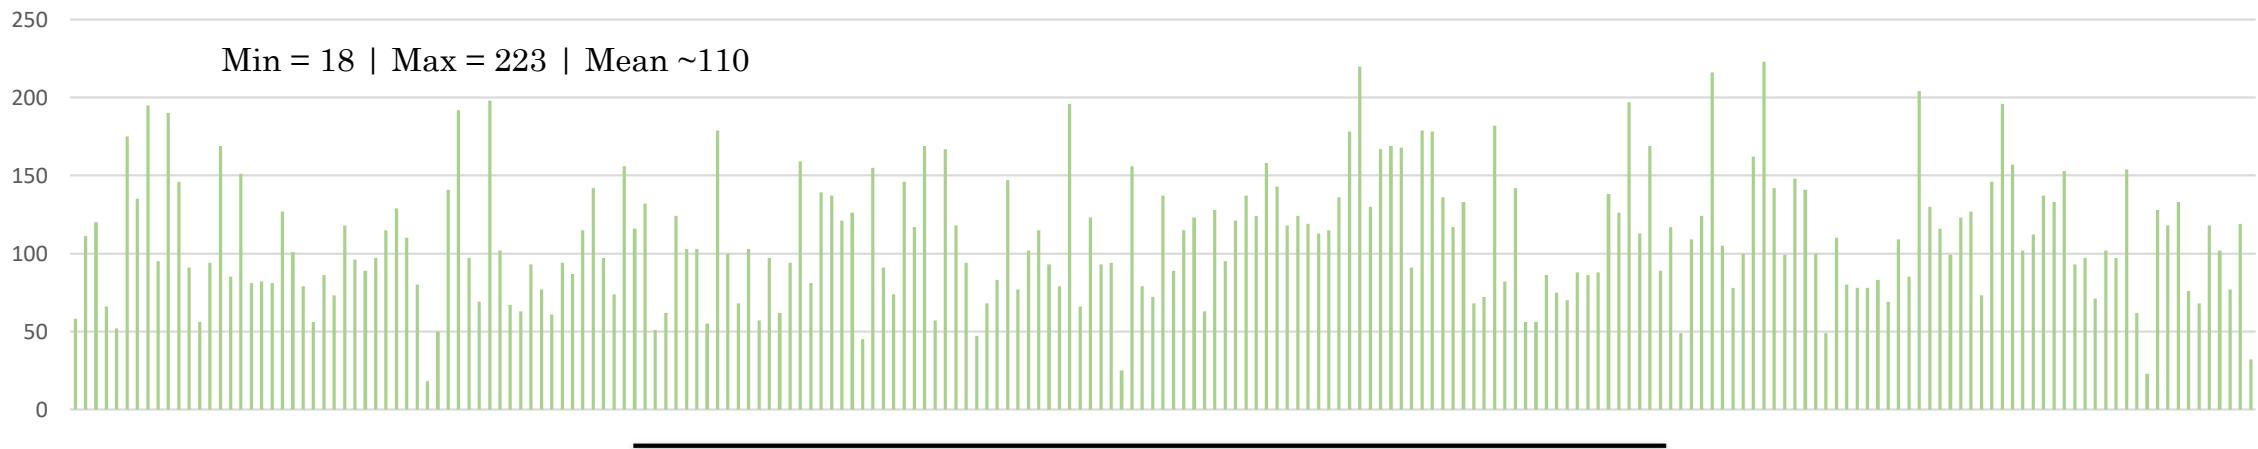

$N_{\text{bulk samples}} = 211$

# Trap composition

$N_{\text{bulk samples}} = 211$

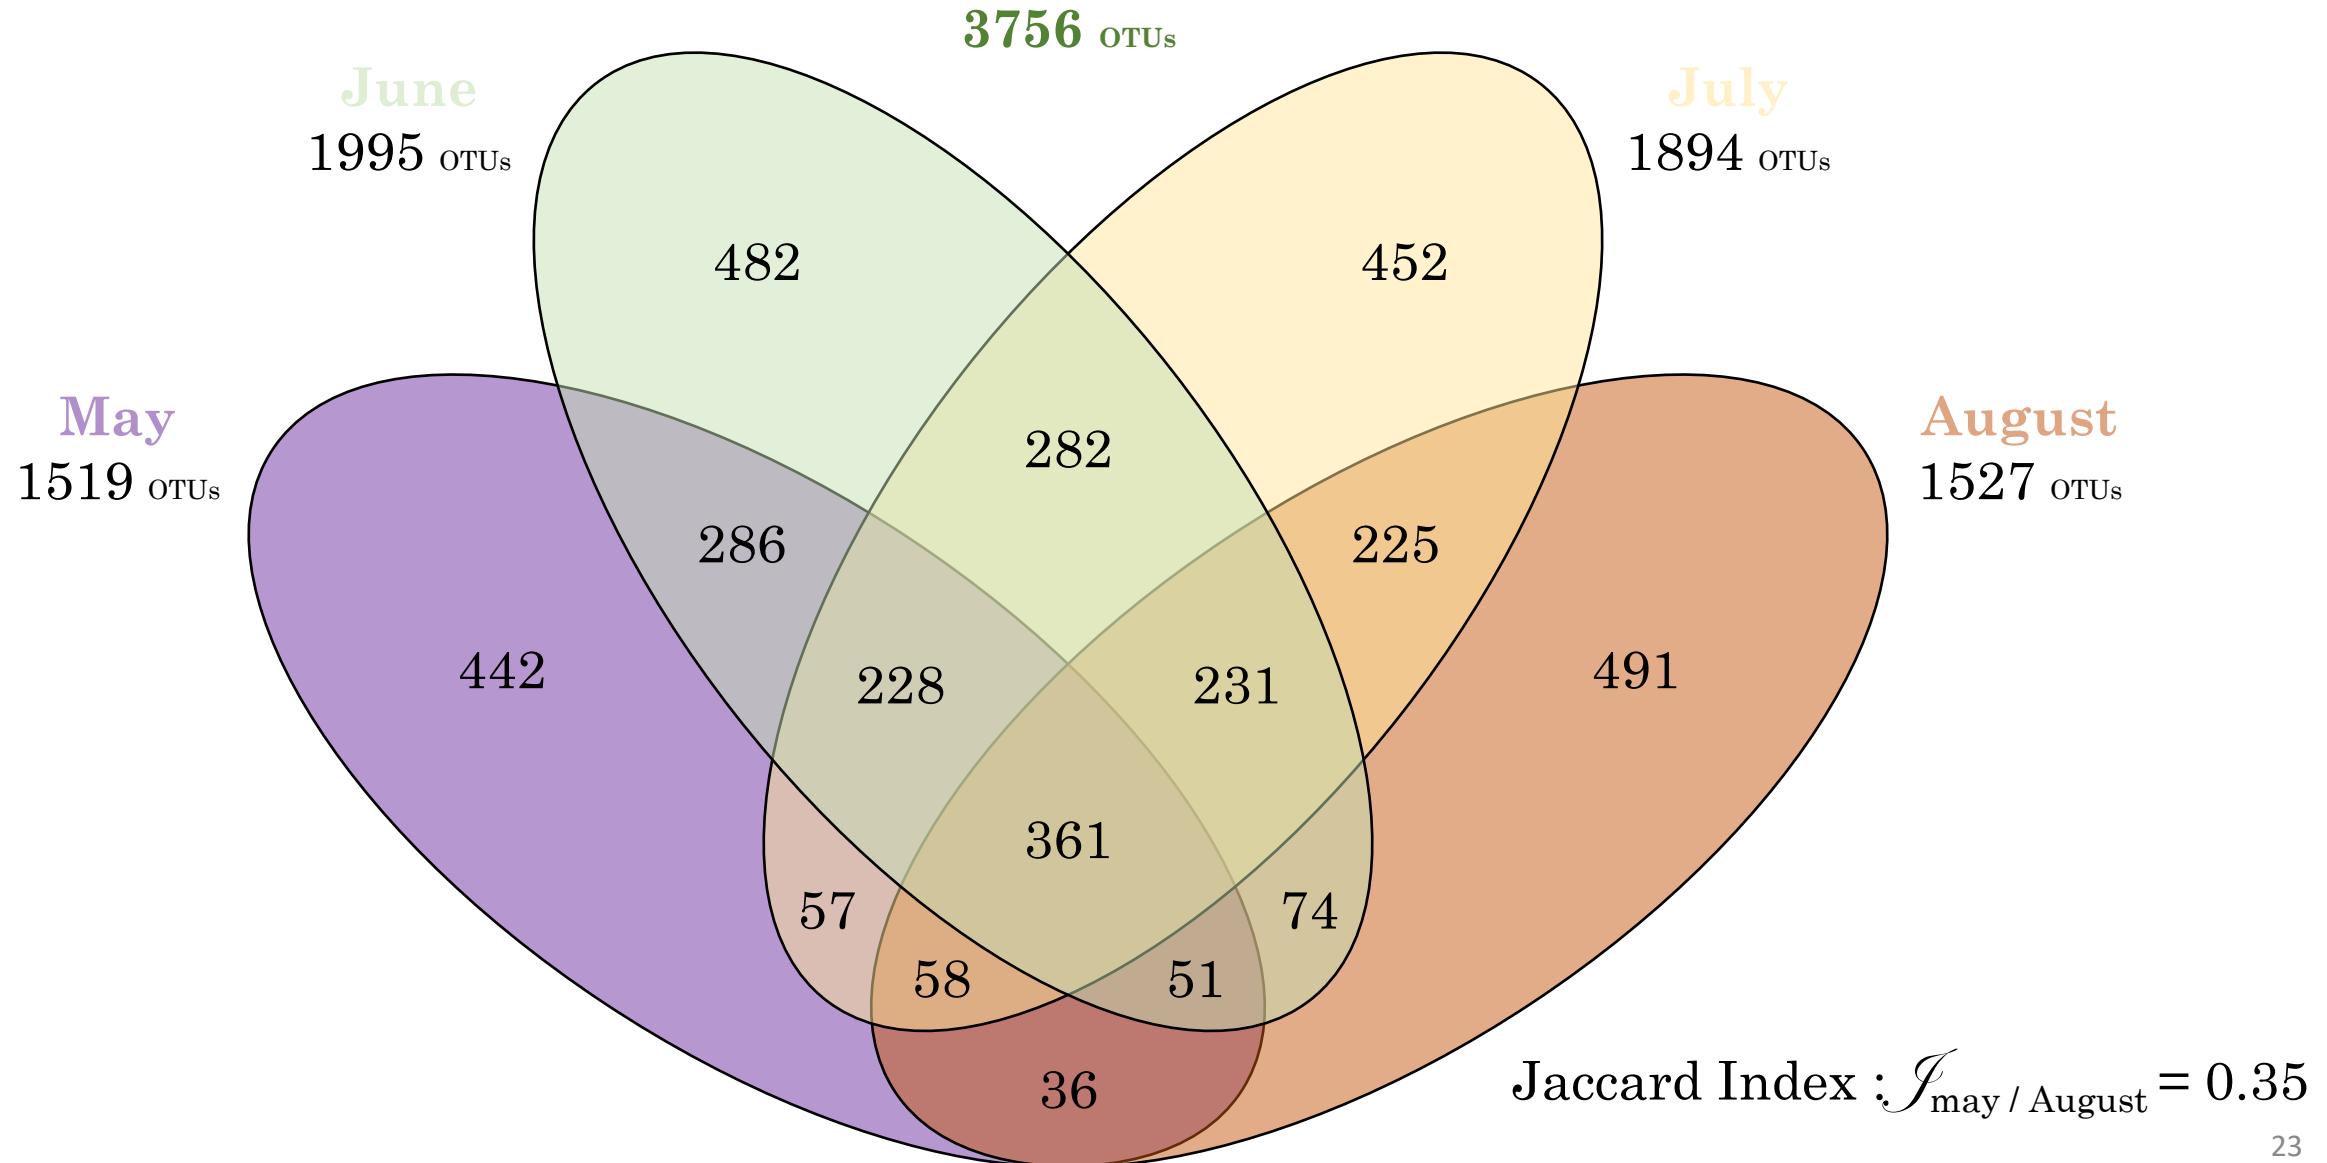

Number of OTUs per bulk sample

Number of bulk samples per OTU

# High temporal turnover from May to August

# Future work

- Expand reference libraries (saproxyllic beetles)
- Improve taxonomic assignment into the bioinformatic pipeline
- Reanalyze with new version DAMe 2.0 incoming
- Compare with other bioinformatic methods (mBRAVE, CROP...)
- Analyze Polytrap (ethanol eDNA metabarcoding)
