Submitted on 2 Jun 2020

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

An assessment of the societal impacts of French soil databases

M. Bardy, A. Gaunand, N. Saby, D. Arrouays,
L. Colinet, N. Munier-Jolain

Context

❖ French soil data

- ❖ Collection coordinated by the French Soil Interest Group since 2001

GisSol

National Soil
Information System

Soil inventories

Monitoring network

Soil tests

Erosion hazard
Languedoc-
Roussillon

SOC evolution (g/kg)

Multiple uses
Which societal impacts?

The Asirpa method (1/2)

Research Evaluation Advance Access published July 25, 2015

Research Evaluation (2015) pp. 1–14

doi:10.1093/reseval/rvv015

ASIRPA: A comprehensive theory-based approach to assessing the societal impacts of a research organization

Pierre-Benoît Joly^{1,*}, Ariane Gaunand^{2,3}, Laurence Colinet⁴,
Philippe Larédo⁵, Stéphane Lemarié^{2,3}, Mireille Matt^{2,3}

- ❖ Based on case studies
- ❖ Standardized description
- ❖ Scaling-up to the organization level

*ASIRPA = Socio-economic analysis of the diversity of Impacts
of Public Research for Agriculture*

The Asirpa method (2/2)

❖ Three main deliverables

Case studies

1. Chronology

- Long term investments
- Capacity building
- Key events

2. Impact pathway

- From research to impact
- Contributions of various actors
- External context

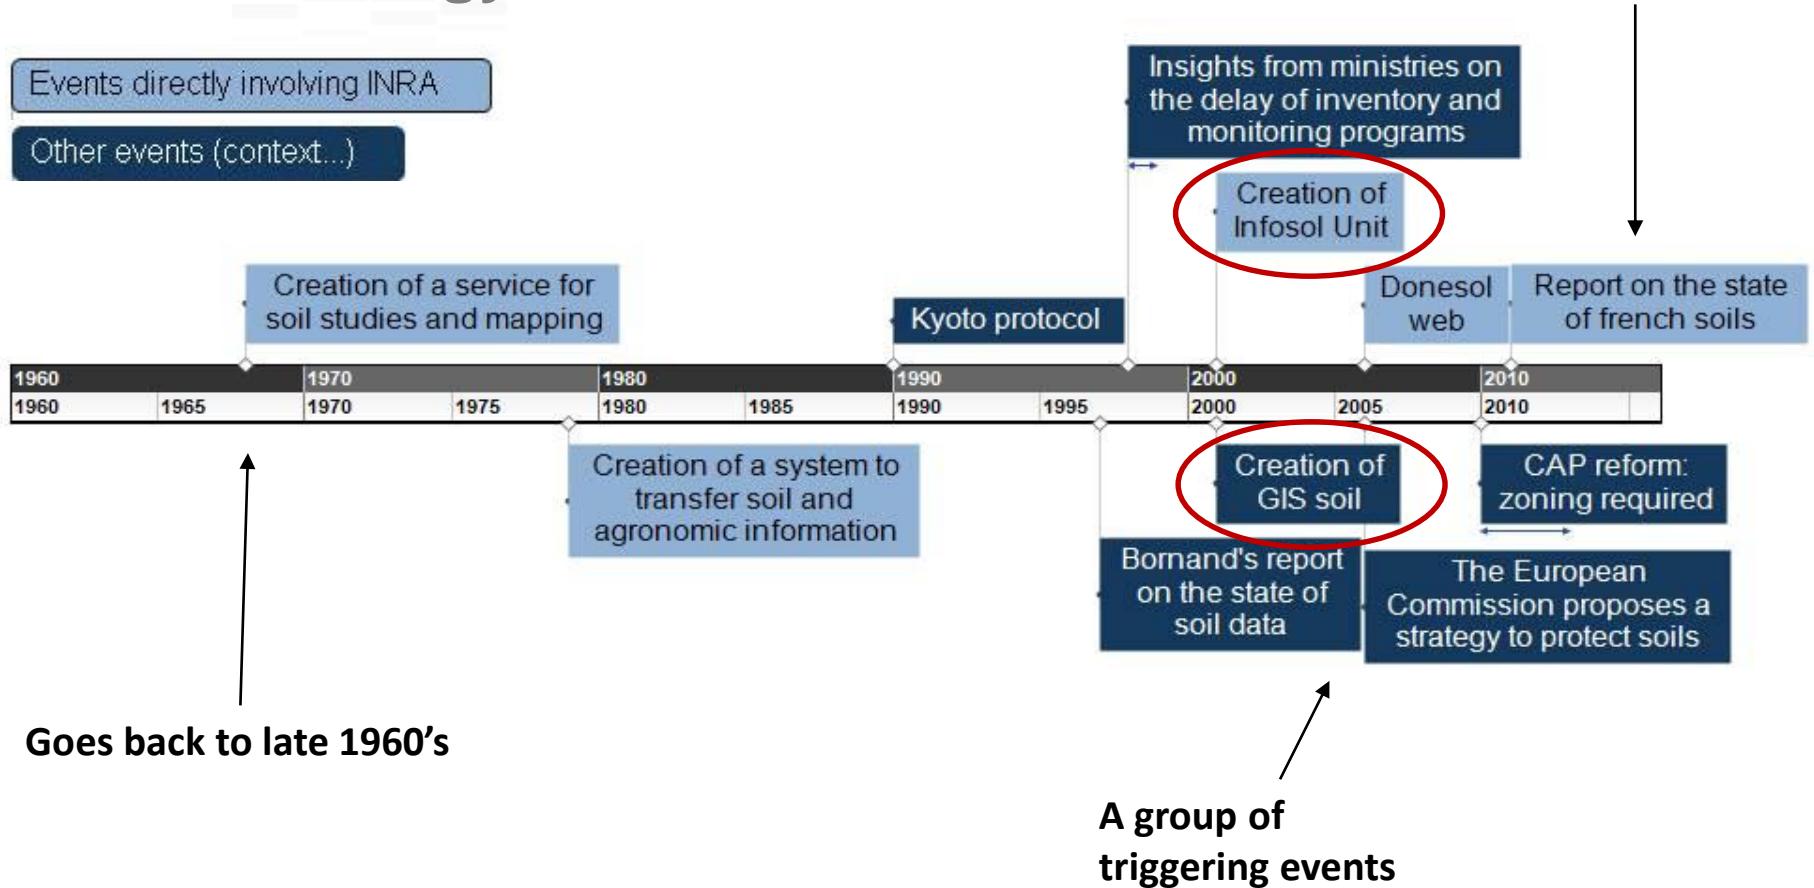

3. Impact assesement

- Various dimensions of impact:
 - ✓ Economy
 - ✓ Public health
 - ✓ Environmental
 - ✓ Territorial – social
 - ✓ Public policies

Impact of French soil databases

❖ Chronology

Impact of French soil databases

❖ Selected case studies

❖ Identification of potential impacts:

- ❖ Direct relationship with end-user
- ❖ Direct relationship with intermediary organisations (provision of data + regular surveys)
- ❖ « By chance »: spontaneous feedback

❖ Description of confirmed impacts:

- ❖ Series of interviews... sometimes many intermediaries before reaching THE end-user
- ❖ Impact confirmed (and described)... or not

Impact of French soil databases

❖ Selected case studies

Public policies

- Zoning habitats to implement biodiversity conservation measures
- Revision of the delineation of less favoured areas

Economy

French Fertilizer Industries
Union: market research
based on national analysis
of soil liming requirements

Territorial impact

Set-up of the bypassing of
built-up areas around Lyon
for high-speed rail

Environment

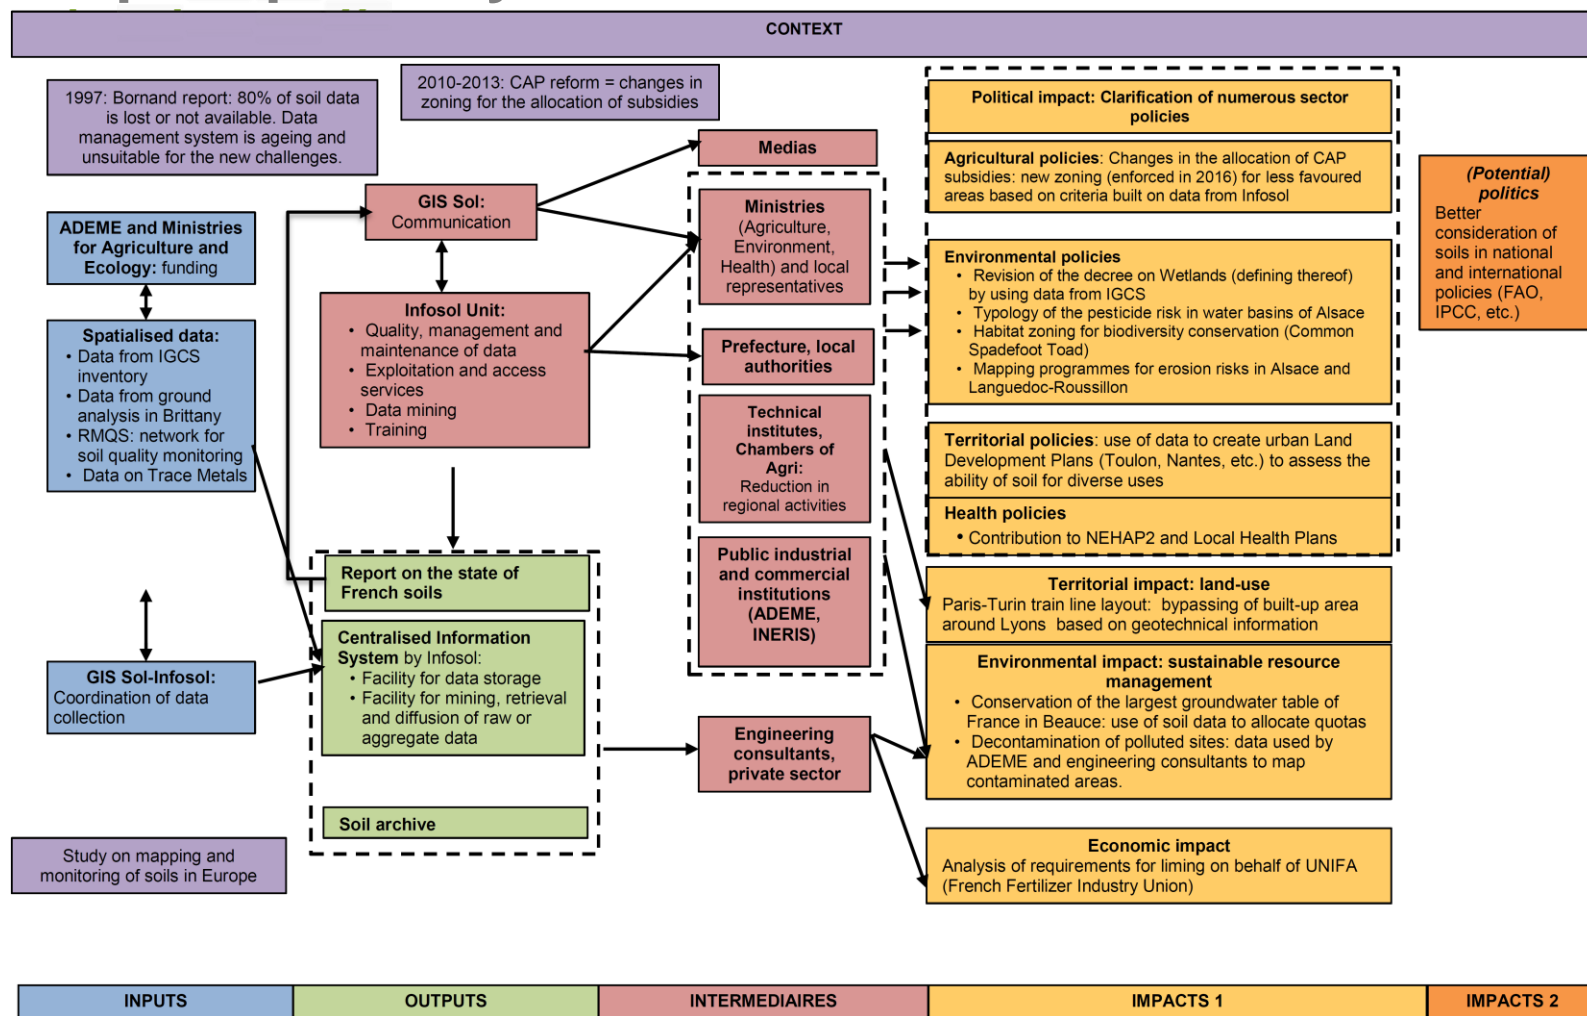

Calculation of the recharge of
the Beauce groundwater table
as an element of negotiation for
the allocation of irrigation
quotas

Health

Implementation of environmental
inequality characterisation tools, with
risk prevention plans including exposure
to soil trace elements

Impact of French soil databases

Impact pathway

Impact of French soil databases

❖ Impact assessment

- ❖ Balanced impacts on the various dimensions
- ❖ Economic impact acknowledged but difficult to quantify

Conclusions and perspectives

- ❖ **1st assessment of societal impacts of French soil databases**
- ❖ **More than the impacts themselves:**
 - ❖ Better knowledge of data end-users
 - ❖ Enhanced recognition of the usefulness of French soil databases
 - ❖ Basis for setting up a new communication strategy regarding soil databases: very successful national conference with testimonies of end-users
- ❖ **Perspectives :**
 - ❖ Add new impact descriptions
 - ❖ Gather testimonies of end-users in a booklet or a documentary

Thanks for your attention!
