HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

INTRODUCTION

For the 21th century, all agricultures of the World will have to take up the challenge : **how to feed all the population of the world ?** Because of the demographic growth and the restriction of resources, production systems have to become more efficient and respectful for environment. That is to say : it is necessary to develop methods for an **ecological intensification of production systems**. In this framework and in the global context of fisheries, pond fish farming has an important role to play. **PISCEnLIT** is a project which **study the different ways for an ecological intensification of fish farming systems (including ecosystemic services management)**.

PRESENTATION OF PISCEnLIT

It is an international project.

Sites

Objectives :

- to assess the ecosystemic services related to pond culture system (surveys)
- to define the conditions of an ecological intensification implementation

PISCEnLIT uses an interdisciplinary approach.

Main tools :

- Tools of environmental analysis (environmental Life Cycle Assessment : LCA + energy analysis : analysis of energetic flows)
- Tools of innovation economy (social and economic LCA)
- Study of biodiversity, ecosystemic services and their perceptions

Project's organization :

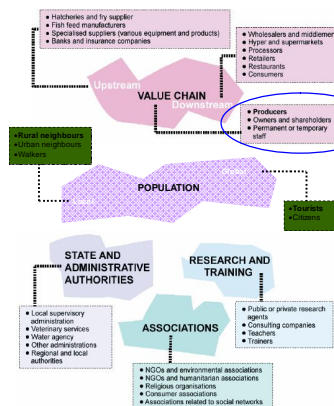

Three years : 2010 → 2012
Six tasks : T1 → T6

MATERIALS AND METHODS FOR T1 TASK

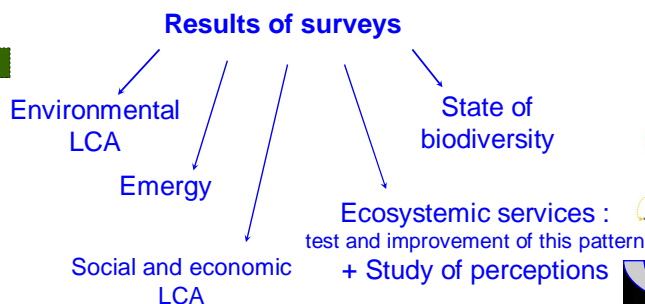

T1 : Surveys

Different kinds of people were concerned :

Current priority :

- fish producer surveys : elaboration, test and practical application

Preliminary identification of ecosystemic services from fish farming ponds
