HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Governing and Managing Animals by Standards and Information Infrastructures

{ The Case of the Genomic (R)evolution in
Dairy Cattle Breeding

Antoine Doré
AgreenSkills Annual Meeting
13-16/02/2017

Co-funded by
the European Union

INRA
SCIENCE & IMPACT

**A Political and Economical Shift from
Governmental to Neoliberal Governance
of Animal Selection**

**(Bioeconomical)
Standards**

**Information
(infrastructures)**

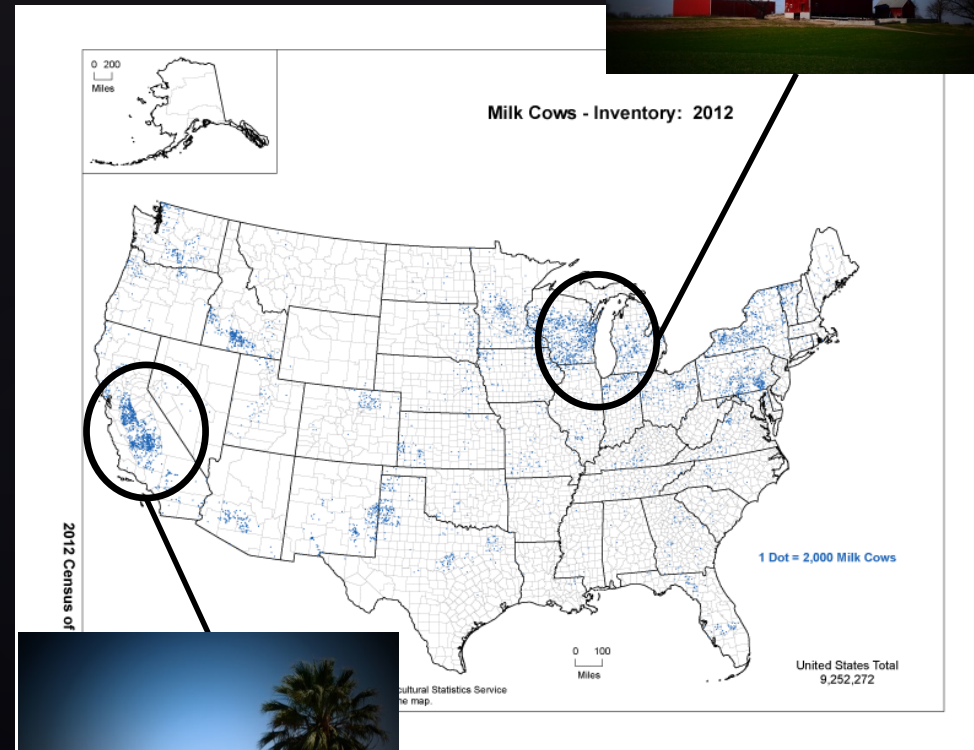

Genomics & Digital “Revolution”

METHOD

Qualitative research:

- (1) ethnographic observation (dairy farms, AI companies, scientific labs)
- (2) semi-directive interviews (dairy producers, performance evaluators, breeding companies, geneticists, etc.; N=41)
- (3) a large body of textual material (technical reports, archives, genetic industry press, ect. ; N>5000)

HISTORICAL OVERVIEW

3 Genetic Evaluation Regimes*

* Regimes of production, regulation and appropriation of selection index for measuring the net merit of breeding animals

Regime	USA
Public evaluation	USDA
Marketing redesign of selection indexes (> 2010)	Every big companies design their own selection indexes
Marketization of genetic evaluation (>2015)	Selection indexes for new traits

NM\$ - TPI

IMPACT OF GENOMICS

- ⌘ Acceleration of Genetic Progress (from star-system to fast and multiple bulls turn-over)
- ⌘ Selection for new traits (new products and services on the market)
- ⌘ New relation to phenotypic data (emergence of new forms of entrepreneurship and competencies for phenotypic data collection and management)

INFORMATION

STANDARDS

Standards 1: Selection Indexes

& Diversification 😊

& Incomparability ☹️

Who actually decides?

Standards 2: Breeds

The standard of “breed”=sociotechnical constructs

& When a breed became a brand: toward a specific Holstein for each company?

Who owns genetic resources?

CONCLUSION

Genomic and digital innovations are accompanying a “marketization” of genetic evaluation activities that deeply impact the relationships between dairy producers, sciences and industries in animal selection sector

Who are the true master breeders?
(dairy breeders vs Genetic Corporation)

Who are the true master geneticists?
(public research vs private R&D)

What is the true valuable resource?
(genetic resources vs Information resources)
