présentation réalisée le 7 juin 2019 - mise à jour sept 2019

Bibliométrie

Définition

- « l'application des mathématiques et des méthodes statistiques aux livres, articles et autres moyens de communication » (Pritchard, 1969)

- « Analyse quantitative de l'activité et des réseaux scientifiques » (Source Wikipedia)
  - volet cognitif en interaction avec des disciplines qui étudient les communautés scientifiques comme objet d'étude (sociologie des sciences, histoire des sciences, épistémologie) et les sciences de l'information
  - volet opérationnel, en liaison avec l'évaluation et le positionnement des acteurs

Analyses bibliométriques

- Publications scientifiques (institutions, thématiques)
  - année, supports de publication, auteurs (+ affiliations)
  - citations (mesure de l'impact scientifique)
- Analyse quantitative (compte de présence)
- Analyse qualitative
  - qualité des supports de publications (FI, notoriété, …)
  - mesure de l'impact / autres publications (même revue ou thématique et année)
- Analyse des partenaires via les adresses des co-auteurs (réseau)
- Benchmarking = positionnement / autres structures

Outils pour la bibliométrie

- Sources d'informations (bases bibliographiques structurées)
  - Web of Science™ (index de citations)
  - Scopus (index de citations) pas d'abonnement à l'Inra
  - HAL (diversité des productions)
- Indicateurs sur les revues
  - JCR (facteurs d'impact)
  - Noria (notoriété des revues)
- Indicateurs sur l'impact
  - InCites (plateforme d'évaluation basée sur Web of Science)
  - SciVal (plateforme d'évaluation basée sur Scopus)
  - ESI Essential Science Indicators
  - Noria (enrichissement de corpus, nb de citations → tops de citations)

Sources de données

- **Web of Science™** (Clarivate Analytics)
  - base bibliographique internationale et multidisciplinaire
  - index de citations
  - + de 250 thématiques (WoS Categories)
  - adresses de tous les auteurs
  - unification partielle des noms des institutions (organization enhanced)
- **InCites** (Clarivate Analytics)
  - plateforme d'évaluation basée sur le Web of Science (décalage 1-2 mois)

ABSTRACT: We studied the effect of vine water status on the dimethyl sulfur potential (DMSP), ammonium, and amino acid contents of the berry during the maturation of Grenache Noir grapes. Water deficit increased the accumulation of amino acids in berries and favored yeast assimilable amino nitrogen. Similarly, ammonium content was higher in berries from vines subjected to moderate water deficit. DMSP content followed the same trend as yeast assimilable amino acid content, with higher concentrations observed in the berries of vines subjected to water deficit. The high DMSP and yeast assimilable nitrogen contents of musts from vines subjected to water deficit resulted in a better preservation of DMSP during winemaking. The wines produced from these musts had a higher DMSP level and would therefore probably have a higher aroma shelf life, because the DMSP determines the rate of release of dimethyl sulfur during wine storage, and this compound enhances fruity notes.

KEYWORDS: *Vitis vinifera, Grenache Noir, water deficit, dimethyl sulfur potential, yeast assimilable nitrogen, ammonium*

Méthodologie 1/2

La méthodologie est identique à celle des 2 études précédentes :

- Une étude bibliométrique sur les publications mondiales « vigne et le vin » a été réalisée par MV Tatry (Inra), D Fournier (Inra) et C Moulliet (IFV) sur la période 1999-2008 http://prodinra.inra.fr/record/34572. Elle a permis d'identifier les principaux pays et institutions publiant dans le secteurs viti-vinicoles et les collaborations qui se traduisent sous forme de co-publications.
- Une étude réalisée sur la période 2008-2012 a permis d'apporter un éclairage sur le dispositif vigne et vin (V&V) de l'Inra, organisé autour des 3 centres Inra Bordeaux-Aquitaine, Colmar et Montpellier. https://prodinra.inra.fr/record/256989
