HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

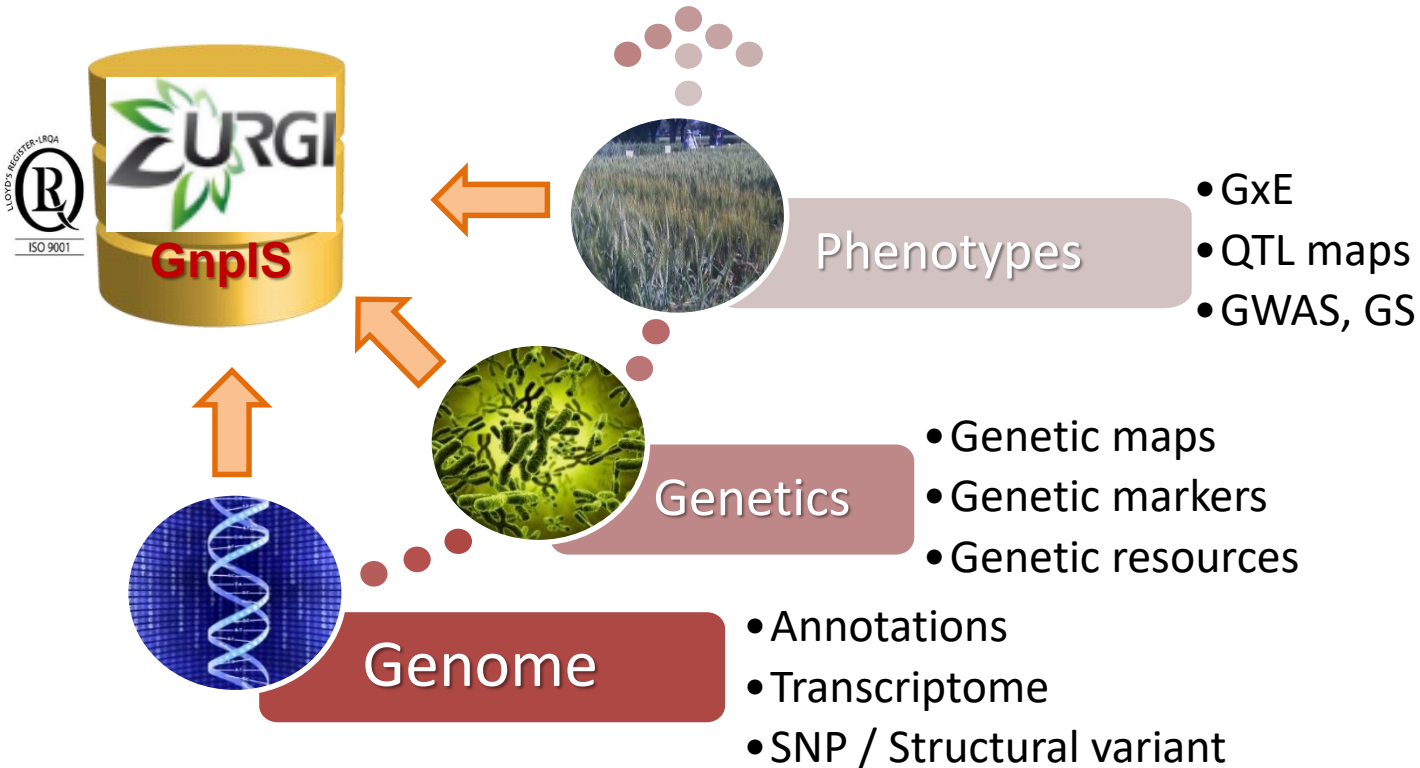

Improving the « FAIRness » of Inra's Data for Plant Biology and Breeding

Unit of Research in Genomic-Info (URGI), INRA

Anne-Françoise Adam-Blondon

GnpIS: INRA IS for crops, forest trees and pathogens

Main global objectives

- Be a robust and sustainable repository of FAIR data (Findable, Accessible, Interoperable, Reusable)
- Integrate GnpIS in sustainable and robust federations of information systems
- Facilitate knowledge development and data analysis

Financial supports

International infrastructures /initiatives

National and international crop projects

Making data and Information systems FAIR has a lot to do with community management

Within and between:

- Developers
- Specialists of ontologies and standards
- Data managers
- Biologists (data producers)

} (Global)
Infrastructure
projects

} Crop/biology
focused
projects

And clarifying what is under the responsibility of each community

Metadata : data about the phenotyping experiment

- MIAPPE: Minimum Information About Phenotyping Experiment
- Developed and maintained by an international community interested in plant phenotyping: large community of breeders and biologists, European infrastructure for Plant Phenotyping (EPPN/EMPHASIS), European infrastructure of Bioinformatics (ELIXIR), Planteome, Excellence in Breeding Platform...
- www.miappe.org
- Steering committee Emphasis, Elixir CGIARs

Metadata : data about the phenotyping experiment

Crop Ontology
Variable=trait + method + scale

Identification : MultiCrop
Passport Data
Standard

Phenotype 1 = measurement on a cultivar in an environment-GPS1-time1
Phenotype 2 = measurement on a cultivar in an environment-GPS2-time2
Genotype = observed marker's alleles on a cultivar
Climate 1 = climatic data at GPS1-time1

MIAPE standard aligned with
MCPD and Crop Ontology
standards

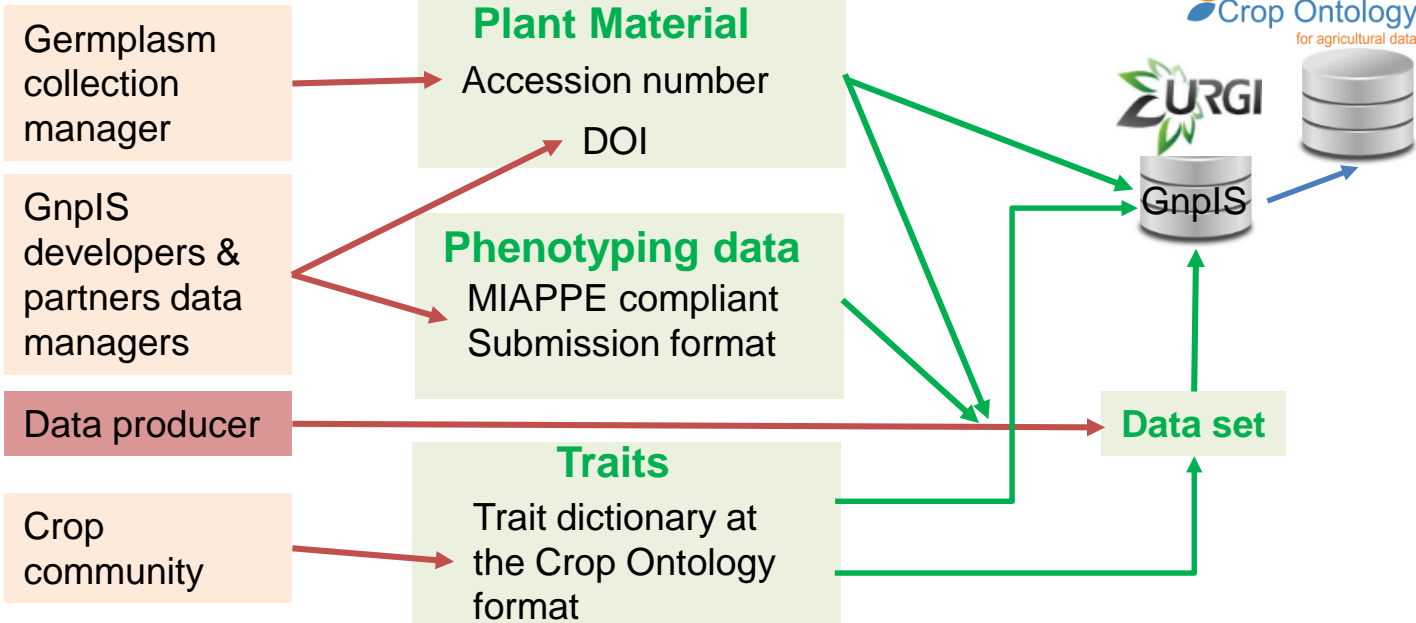

Inspire EU directive?

Who provides the metadata – e.g. phenotyping data

Who

What

Repositories

Data managers: important role in facilitating flows between registries of identifiers, data set repositories and data producers

Develop a sustainable and robust federation of plant information systems

Data is scattered in many information systems

Findability: Data discovery through a common portal

Spannagl et al 2016, doi: 10.3835/plantgenome2015.06.0038

Common
Data
Model

Challenges:

- Synchronize technical updates of the infrastructure
- Synchronize improvements of the data model
- Searching with increasingly natural language (e.g. for traits)

Opportunity: great tool to build a community of developers, data managers and specialist of ontologies that work together

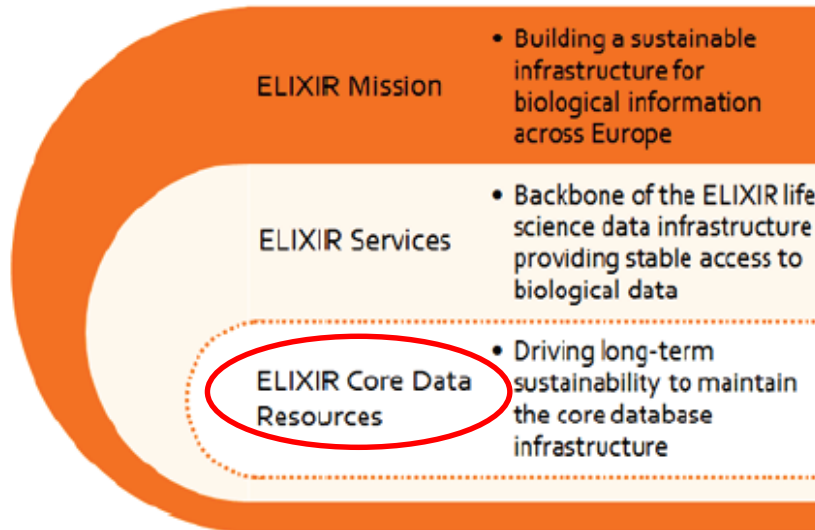

Federation of Plant Information systems

Federation(s) of plant information systems

Development of a consistent and robust suite of open source tools based on common internationally agreed standards : one of the key elements of a sustainable federation
