HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Never or very little exploited

- Never or very little exploited
- A long period without anthropogenic disturbance

- Never or very little exploited
- A long period without anthropogenic disturbance
- -> an ancientness of several centuries

- Never or very little exploited
- A long period without anthropogenic disturbance
- A high maturity
- -> many large living trees
- -> old living trees
- -> many types of TreMs (Tree related microhabitats)
- -> high volume of dead wood (different states of decomposition)

TreMs examples

Black woodpecker feeding cavities © L. Larrieu

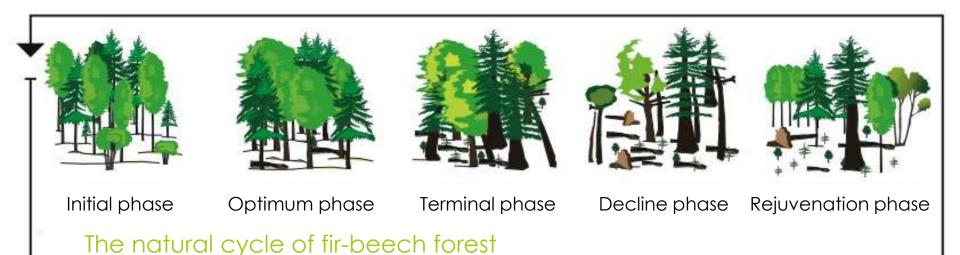

- Never or very little exploited
- A long period without anthropogenic disturbance
- A high maturity
- A high biodiversity

- Never or very little exploited
- A long period without anthropogenic disturbance
- A high maturity
- A high biodiversity
- Stands dominated by dryades

- Never or very little exploited
- A long period without anthropogenic disturbance
- A high maturity
- A high biodiversity
- Stands dominated by dryades
- Heterogeneity of the vertical structure

Old-growth forest (OGF)

- ⇒ A concept defined by ecologists
- ⇒ A definition excluding human uses/practices

OGF: a key role facing global change

Carbon storage

OGF: a key role facing global change

- ☐ Carbon storage
- □ CO₂ fixing

OGF: a key role facing global change

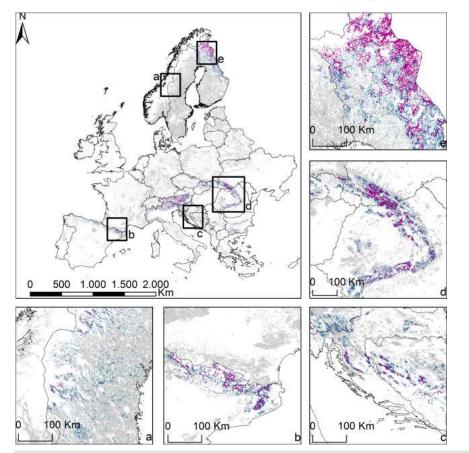

- Carbon storage
- \square CO₂ fixing
- Species and intraspecific genetic diversity

- OGF: a key role facing global change
- Carbon storage
- \square CO₂ fixing
- ☐ Species and intraspecific genetic diversity
- Reservoir of biodiversity

- OGF: a key role facing global change
- Carbon storage
- □ CO2 fixing
- ☐ Species and intraspecific genetic diversity
- ☐ Reservoir of biodiversity

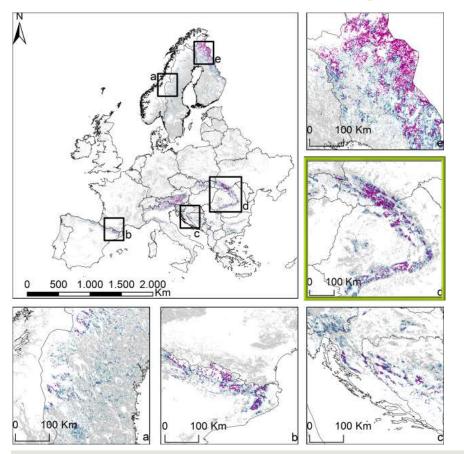

!! But underestimated ecosystem goods and services !!

OGF: less than 1% of European forest

- Forests
- Top-ranking 5%
- Remaining 90-95%

OGF: less than 1% of European forest

Maramureş County has the last primeval beech forest!

Unesco World Heritage from July 2017: « The area is made entirely out of beech forests and represents one of the most unique primeval forests of the Romanian Eastern Carpathians »

Is it possible to have a "primeval forest" at the heart of a mining area?

Is it possible to have a "primeval forest" at the heart of a mining area?

Primeval forest: large forest area constituted from the last deglaciation and never exploited or disturbed by human

- ✓ If so, why and how is it possible?
- ✓ If no, what is Strambu Băiuț?

- ✓ If so, why and how is it possible?
- ✓ If no, what is Strambu Băiuț? What is its degree of maturity, diversity, ancientness, long-term dynamic, resilience capacity?

- ✓ If so, why and how is it possible?
- ✓ If no, what is Strambu Băiuț?
- ✓ If no, what are and were human practices and uses?

- ✓ If so, why and how is it possible?
- ✓ If no, what is Strambu Băiuț?
- ✓ If no, what are and were human practices and uses?
- ✓ If no, is there an antagonism between biological diversity, its conservation and human practices ?

Retro-observation: historical & paleo- ecology

- ✓ Soil charcoal analysis
- ✓ Archaeology and LiDAR
- ✓ Charcoal kiln analysis

Retro-observation: historical & paleo- ecology

- ✓ Soil charcoal analysis
- ✓ Archaeology and LiDAR
- ✓ Charcoal kiln analysis
- ✓ Texts and maps study

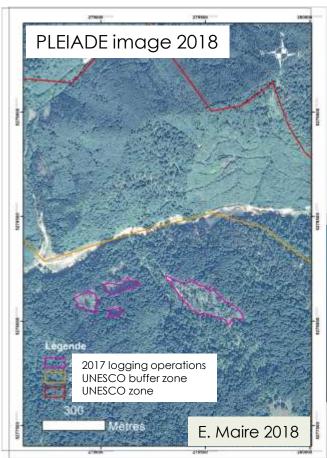

Observation: ecology & social geography

Forest ecology, dendrochronology, biogeochemistry, soil DNA analysis, social inquiries

Observation: high resolution satellite imagery and LiDAR

 Bast

C. Calastrenc & N. Poirier 2017

- ✓ Deforestation control
- ✓ Forest structure
- ✓ Structural components of biodiversity

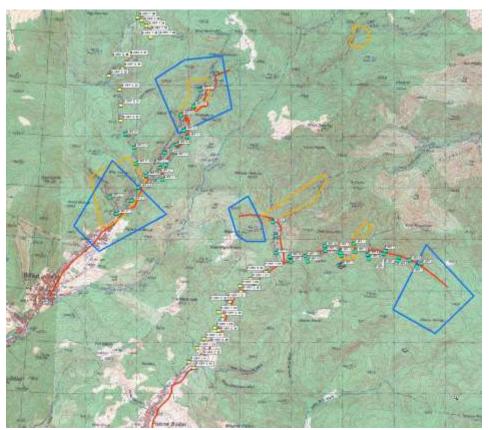

Forests are considered in a broader land use system

About 40 interviews with local population and main stakeholders

© S. Guillerme

2 XRF Transects for measuring heavy metal pollution

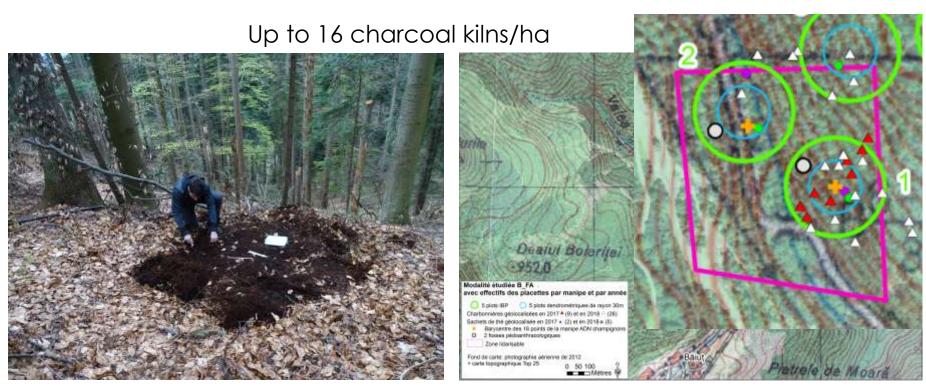

3 measures per point

- -> alluvium
- -> soil horizon A within forest

Charcoal manufacturing in the modern times until the 19-20th c.

Charcoal manufacturing in the modern times until the 19-20th c.

Wastes of logging operations with different saproxilation stages

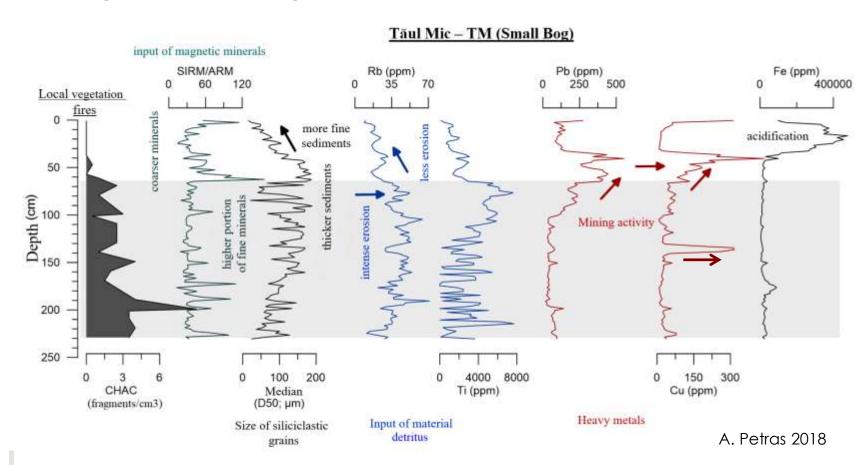

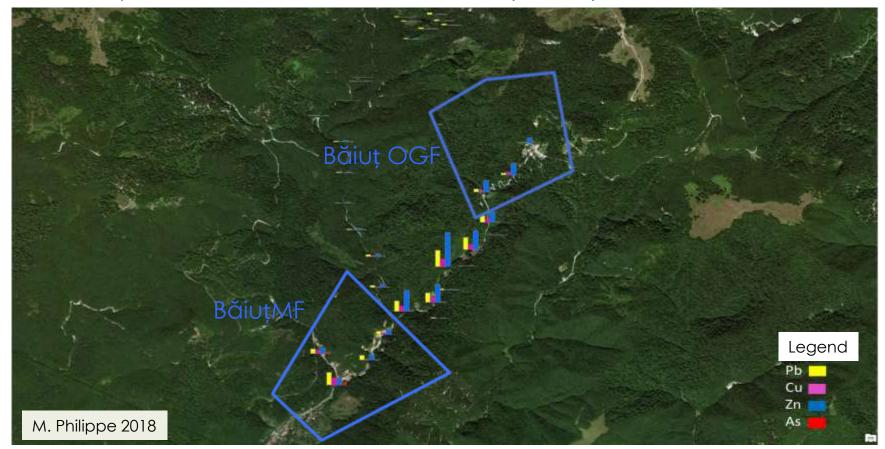

« Fitting notchs »

- ✓ To test the quality of wood
- ✓ Selective timber extraction

A plurisecular exploitation?

XRF Băiuț: environmental contamination by heavy metals

But many attributes of maturity

- ✓ Dryades Abies alba, Fagus sylvatica (Picea abies)
- ✓ Secondary species Acer pseudoplatanus, Fraxinus excelsior, Betula pendula etc.
- ✓ Dead wood
- ✓ Very large trees (dbh > 100 cm)
- ✓ TreMs

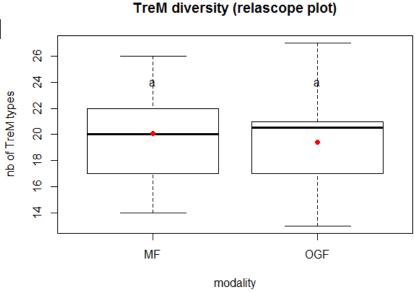

Very ancient wooded areas?

First pedoanthracological results:

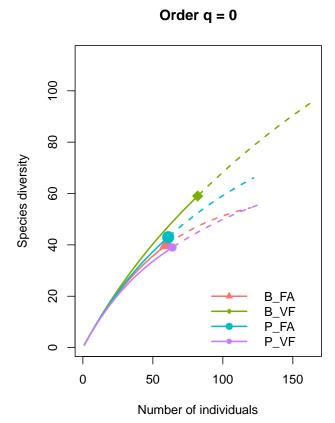

- Continuity of forest ecosystem (from several millennia?)
- Continuity of fir-beech forest
- Anthracomass very low in OGF and very high in MF

No significant differences between AM and OGF

- ✓ Similar vertical structure
- ✓ IBP similar score
- ✓ No more lying dead wood
- ✓ No more TreMs diversity

Fungi diversity slightly higher in Băiuț OGF and Poiana MF

+ indicator species of "subnatural forest":

Fomes fomentarius
Phellinus hartigii
Polyporus squamosus
Sparassis nemecii
Hericium flagellum
Climacodon septentrionalis
Fomitopsis pinicola

Saproxylic beetles diversity higher in Băiuț MF

4 high-value species inpn.mnhn.fr

- ✓ It is not a primary forest
- ✓ It is not a "subnatural" forest
- ✓ It is a "secondary" managed forest but with OGF indicators
- ✓ It is a very ancient forest

- ✓ It is not a primary forest.
- ✓ It is not a "subnatural" forest
- ✓ It is a "secondary" managed forest but with OGF indicators
- ✓ It is a very ancient forest

- ✓ It is not a primary forest.
- ✓ It is not a "subnatural" forest
- ✓ It is a "secondary" managed forest but with OGF indicators.
- ✓ It is a very ancient forest

- ✓ It is not a primary forest.
- ✓ It is not a "subnatural" forest
- ✓ It is a "secondary" managed forest but with OGF indicators.
- ✓ It is a very ancient forest.

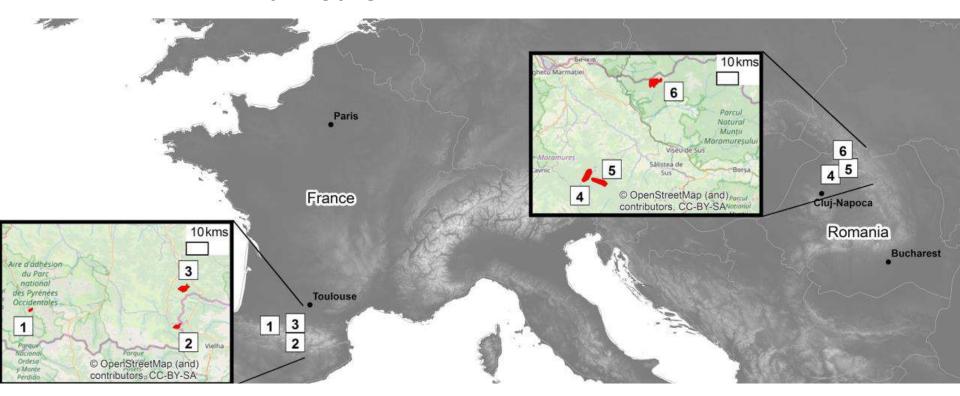

- ✓ It is not a primary forest.
- ✓ It is not a "subnatural" forest
- ✓ It is a "secondary" managed forest but with OGF indicators.
- ✓ It is a very ancient forest

=> Towards a new definition of the "subnatural forest" concept

Is there an antagonism between biological diversity, its conservation and local human practices?

What are tolerable trajectories for biodiversity conservation?

BENDYS PROJECT

Thank you!
