HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

M-POETE, A Mobile-Platform for the Observation and the Experimentation in Terrestrial Ecosystems

Zeller B., Saint-André L., Bienaimé S., Murat C., Constant T., Bonne F., Longdoz B., Klump K.

Context and Challenges

➤ Why such a platform?

RENECOFOR (102 permanent plots, here shown the beech plots)

- Generalize observed findings (example nitrification) from a well equipped site using a network of sites (network approach, variation of soil parameters, climate.....)
- Need for new networks or combination of networks (territory approach) with respect to specific scientific questions or to respond to policy objectives

Context and Challenges

➤ Challenges

Improvement of knowledge and multi-disciplinary approach

Missions

Mobile Laboratory Units **Missions:**

- Characterize terrestrial ecosystems (vegetation, soils, climate)
- Provide a backbone for measurement campaigns (short –term fluxes, special events, access to non stable molecules.....)
- Research and development of *in situ* techniques and high frequent and/or non destructive measures (instant fluxes, fragile non stable samples, preservation of samples)

Mobile Laboratory Units **Dutys:**

- Mobile laboratory provides basic equipment for field based measurements in numerous terrestrial ecosystems.
- Modularity for targeted campaigns
- Can host specific equipments provided by the applying research teams

Characterize terrestrial ecosystems

- Mobile lab provides adaptable infrastructure (lab mobile, Polaris, trailer) to set up well designed field based measurements.
- The whole is highly mobile and needs few time to move from site to site.
- Use of the “Polaris” optimize transport time between sampling sites and analysis base, improve the transport of equipment.
- Basic equipment:
 - Common** toolbox: high precision GPS, meteorological devices
 - Soil** toolbox: Soil corers, humidity probes, sieves, soil physics toolbox,..
 - Vegetation** toolbox: tree height, diameter, LAI, T-LIDAR,...
 - Microbial** toolbox: sample preparation tools (sampling, isolation,

Provide a backbone for measurement campaigns (short – term fluxes, special events, access to non stable molecules.....)

- Lab mobile and trailer(s) equipped with on board analyzers (NIRS – MIRS, PICARRO....) or sample preservers (lyophilisation, liquid N2) to support multi-disciplinary research.
- Improves the temporal and spatial resolution of field based measurements

its

Research and development of in situ techniques and high frequent and/or non destructive measures (instant fluxes, fragile non stable samples, preservation of samples)

- Characterization of solid and liquid samples (NIRS – MIRS, 18O and 2H analyzer)
- Characterization of the vegetation DRONE (Lidar, Multi-channel cameras, Infrared camera,..)
- Microbiology = preservation of samples

MD4-100- porteur grande capacité

Access

Open platform from the national infrastructure ANAEE-Fr

Applications soon available on the ANAEE-Fr website

You are very welcome !!!!!
