HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
Institut National de la Recherche Agronomique (INRA) Montpellier - UMR 1083 & 1208

Substitution of chemical phenols by plant polyphenols for processing phenolic biomaterials
INTRODUCTION

WORLD ANNUAL PRODUCTION OF PHENOL

2000 : 6 million tons
2010 : 8 million tons
2020 : 12 million tons (prediction)

Market in expansion
New production plant in Nanjing, China (INEOS and SINOPEC) : 400 000 tons (end 2013)

EUROPEAN PHENOL USE

2 million tons per year ; more than 80% for plastic materials and resin

APPLICATIONS

• Plastic materials : thermosetting (polycarbonate, epoxy)
• Plastic fibers : nylon (polyamide)
• Electric isolating
• Bactericid paint
• Hydrophobic coating
• Anionic detergent
• Thermic ink
• Insulating glue

Need to find quickly alternatives to petroleum-based aromatic compounds to halt the massive contamination of our environment and protect human beings from its negative impacts on health.
Substitution of chemical phenol by natural polyphenols

- **Extension units**
  - \( R^1, R^2 = \text{OH or H} \)
  - \( R^3 = \text{H, Gal} \)

- **Terminal unit**

- **Condensed tannins**

- **Lignin**

- **Condensed tannins**

Laurent ROUMEAS

26/02/2015
DEPOLYMERIZATION: a key step

- to get an homogeneous raw material or fine chemicals
- to get the same synthons from different tannin sources
- to suppress one step (simultaneous extraction/depolymerization)

Large scale process for production of biobased phenols
DEPOLYMERIZATION: obtention of phenolic synthons
Perspectives

- **Materials**: thermoplastic; polyester, polyamide, vinylester,... and composite
- **Fine chemistry**: Medicinal, cosmetic
  - Lubricant
  - Surfactant

RESULTS

Functionnalization

Curing

Epoxy resins (thermosetting)
Thank you for your attention!
