**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

## MERLION METABOLOMICS WORKSHOP SINGAPORE 2014

### MERLION METABOLOMICS WORKSHOP SINGAPORE 2014

Developing Metabolomics Platform Technologies through  
Singapore-French Research Alliance

Date: 19 - 21 November 2014  
Venue: University Town, National University of Singapore

- \* New century and new scientific context
- \* Metabolomics a new tool for biology
- \* **RFMF** : a French bottom up initiative
- \* **MetaboHUB**: A French governmental top down initiative

The National Institutes of Health  
The National Science Foundation  
The Department of Energy

The National Research Council's  
Board on Life Science  
(2008-2009)

- 1- to examine the current state of biological research in the United States
- 2- recommend how best to capitalize on recent technological and scientific advances

## **Report** **A New Biology for the 21st Century**

<http://www.nap.edu/catalog/12764.html>

- Goals:**
- 1- **Propel science to a new level**
  - 2- **Provide solutions to pressing societal problems**

**Human Health**

**Food Science**

**Energy**

**Environment**

MetaboHUB has been build according to the precepts laid down in this Report

**Interconnected problems  
need  
Interconnected solutions**

The challenge cannot be met in isolation

# What do we mean by metabolomics and fluxomics ?

## Metabolome:

all small molecules (metabolites) occurring in a biological system.

*Stephen Oliver (1998, UK)*

## Fluxome:

All quantified metabolite fluxes occurring in a biological system.

## Metabolomics:

Tools and strategy for determination of metabolite levels occurring in a biological system. and their changes over time as a consequence of stimuli

## Fluxomics:

Tools and stratgy for determination of metabolite fluxes occurring in a biological system. and their changes over time as a consequence of stimuli

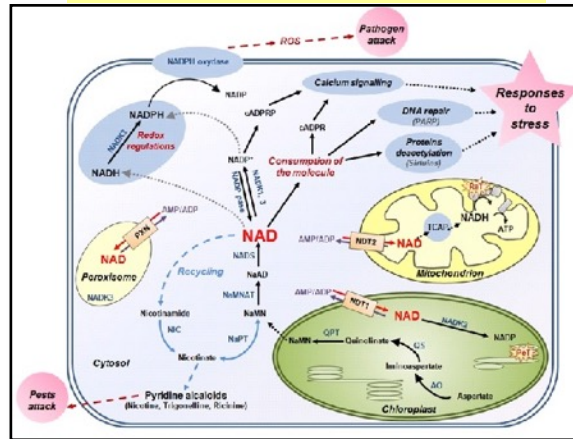

# What do we mean by metabolomics and fluxomics ?

## Metabolomics profiles

### Targeted or non targeted

## Biological system: Cell Metabolic pathway map

## Metabolic flux analysis

METABOHUB

# Tools to build the future

**MetaboHUB** is a French governmental "**top down**" initiative aimed to set up a French Infrastructure devoted to the M & F in France

2013

RÉSEAU FRANÇAIS DE MÉTABOLOMIQUE ET FLUXOMIQUE

2005

**French Network for Metabolomics and Fluxomics**

This is a typical "**bottom up**" initiative aimed at facilitating and promoting sustainable development of the M & F in France

# RFMF Goals since 2005

## French Network for Metabolomics and Fluxomics

- Foster relationships between French researchers in M & F
- Promote and structure education and training in M & F
- Organize and support the organization of conferences in France
- Encourage through grants the participation of young researchers to national and international conferences
- Allocate funds mission or prizes for accomplished work in M & F

RÉSEAU FRANÇAIS DE MÉTABOLOMIQUE ET FLUXOMIQUE

A growing community with a geographic & thematic expansion

**Bratislava 1**

**Moncton 1**

**260 Participants**  
**84 French laboratories**  
**16 Foreign laboratories**

RÉSEAU FRANÇAIS DE MÉTABOLOMIQUE ET FLUXOMIQUE

# RFMF Actions since 2005

**300 members connected by a mailing list and a Web site**

2013: 136 messages were relayed on the mailing list mainly for job position

**Since 2005: financial support to young scientists**

2013: 15 travel grants (4300 euros)

2014: 18 travel grants (3730 euros)

**Since 2013: Sponsoring the RFMF Junior**

Pedagogic actions for Master students through a Master session during the annual workshop

**Sponsoring collective research (15 Laboratories)**

3 posters and 1 publication in Metabolomics

**Organizing specialized workshop and round tables**

on techniques, softwares, procedures,

Next year in Lille

9 èmes Journées Scientifiques

**RFMF**

## FRENCH STRATEGY FOR RESEARCH AND INNOVATION

03/07/2012

[catherine.chapel@recherche.gouv.fr](mailto:catherine.chapel@recherche.gouv.fr)

ESFRI= European Strategy Forum on Research Infrastructures

## Creation world-class metabolomics knowledge infrastructure to contribute to science

Contribution to solve biological questions linked to pressing societal problems  
(Food, Environment, Agriculture, Health, Biotechnology ... )

### MetaboHUB strategy and Challenges

Generic technology development in the core programme

Providing services to the french community

Technology translation in application projects in collaboration with associate partners

#### Food Science

#### Biotechnology

#### Environment

#### Human Health

## Metabolomics and Fluxomics :

**Much more complicated than a simple metabolite analysis**

- Need a set of analytical methodologies
- Need a set of heavy and expensive equipment
- Need skills and specific competences
- Generate the concept of platforms
- Generate the concept of networking

**METABOHUB**

# MetaboHUB challenges

**Metabolomics is facing big technological and scientific challenges**

## For a huge world of applications

- Drug discovery and personal medicine
- Plant breeding and seed industry
- Nutrition and food industry
- Green and white biotechnology
- Environmental issues
- and much more...

### Human Health

### Food Science

### Biotechnology

### Environment

## Metabolomics is facing a world of complexity

### Metabolome definition

- is more conceptual than realistic
- generation of analytical challenges
- generation of methodological challenges
- generation of technological challenges
- generation of scientific challenges

## We need to do some progress in the process of molecule identification and quantification

### How

- By using more efficient equipment
- By building spectral DB of reference molecules (MS, NMR)
- By developing exchangeable DB between machines
- Set up standardization procedures
- Developing new protocols that can be shared by all
- And much more...

### Metabolomics is facing a world of complexity

#### Some progress are need in bioinformatics

- MetaDB (domain dependant)
- Spectral reference DB
- DB storage
- Data reduction
- Data interpretation
- Metabolic network analysis
- DB knowledge (domain dependant)
- etc...

#### Part of the success go through regulatory and standardization issues

Especially to the transfer metabolomics technology to industry business

##### Human Health

##### Food Science

##### Biotechnology

##### Environment

Bringing together 4 outstanding metabolomics platforms

Health & Clinical  
Microbiology

# METABOHUB

## A core facility with a wide range of analytical tools and competences

**7 NMR**

500 MHz

600 MHz

### NMR

800 MHz

### Metabolic Flux (Bio)chemistry

### Mass spectrometry

**27 LC MS  
11 GC MS**

### Bioinformatics, DB & Biomathematics

**8 servers  
2 data bases  
11 specialized software's**

### Robotics & HT devices

**5 Robots**

## NMR Expertise

## Platform leaders

## MS Expertise

## Math & bioinfo Expertise

## Lipidomics Expertise

## Flux Expertise

**Building term (2013-2016)**  
**Science & technological  
developments**

**Service term (starting in january 2017)**  
**Service & support for projects**

## WP1 - Metabolomics

**C. Junot**

## WP3 - Bioinformatics

**E. Thevennot**

## WP2 - Fluxomics

**JC. Portais**

## WP4 - Service

**M. Ferrara**

## WP5 – Management WP6- Communication

**C. Sautot**

WP1a: Metabolite identification and metabolome annotation (implementation of spectral DB)

WP1b: Shared tools for lipidomics

WP1C: Tools for normalization and for quantitative MS-based metabolomics.

WP3: Shared bioinformatics tools for data management and data mining

WP2a: Integrated tools for metabolic network reconstruction, visualization and modeling.

WP2b: High-Throughput fluxomics

WP2C: Time and spatial resolution of the fluxome

**Human Health**

**Food Science**

**Biotechnology**

**Environment**

Untargeted metabolomic approaches and data mining tools for marker discovery in nutrition

Non targeted metabolomics for assessment of environmental exposure to contaminant and their biological effects

Nutritional metabolomics as integrative understanding of metabolic disease development

SINGAPOUR

Metabolic networking modelling and food Toxicity

Lipidomic analysis of palm oil variability
