HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Abstract :

We consider a two-state semilinear population dynamics model of reaction-transport type. The reaction term exhibits a quadratic nonlinearity involving a kernel operator on the state of the system, whose expression leads to different classical population dynamics models. We first prove the well-posedness of the problem by a spectral method. Then, using the characteristics of the system, we prove that the state of the system is an operator fixed point and use this to perform simulations.
