**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# Daily work with stable isotope spectroscopy instruments in Hesse forest

Caroline PLAIN, Florian PARENT, Bernard LONGDOZ, Nicolas MARRON, Daniel EPRON

## Calibration

$^{12}\text{CO}_2$	$^{13}\text{CO}_2$
293.2	3.2
392.9	4.2
395.3	4.3
494.7	5.3
681.6	7.3
886.2	9.5
1183.6	12.7

### → TGA 100 (Campbell)

- ✓ lead salt laser diode, LN2 cooled
- ✓ wave numbers between 2280 and 2310  $\text{cm}^{-1}$  ( $\approx 4.33 \mu$ )

### → Working standards

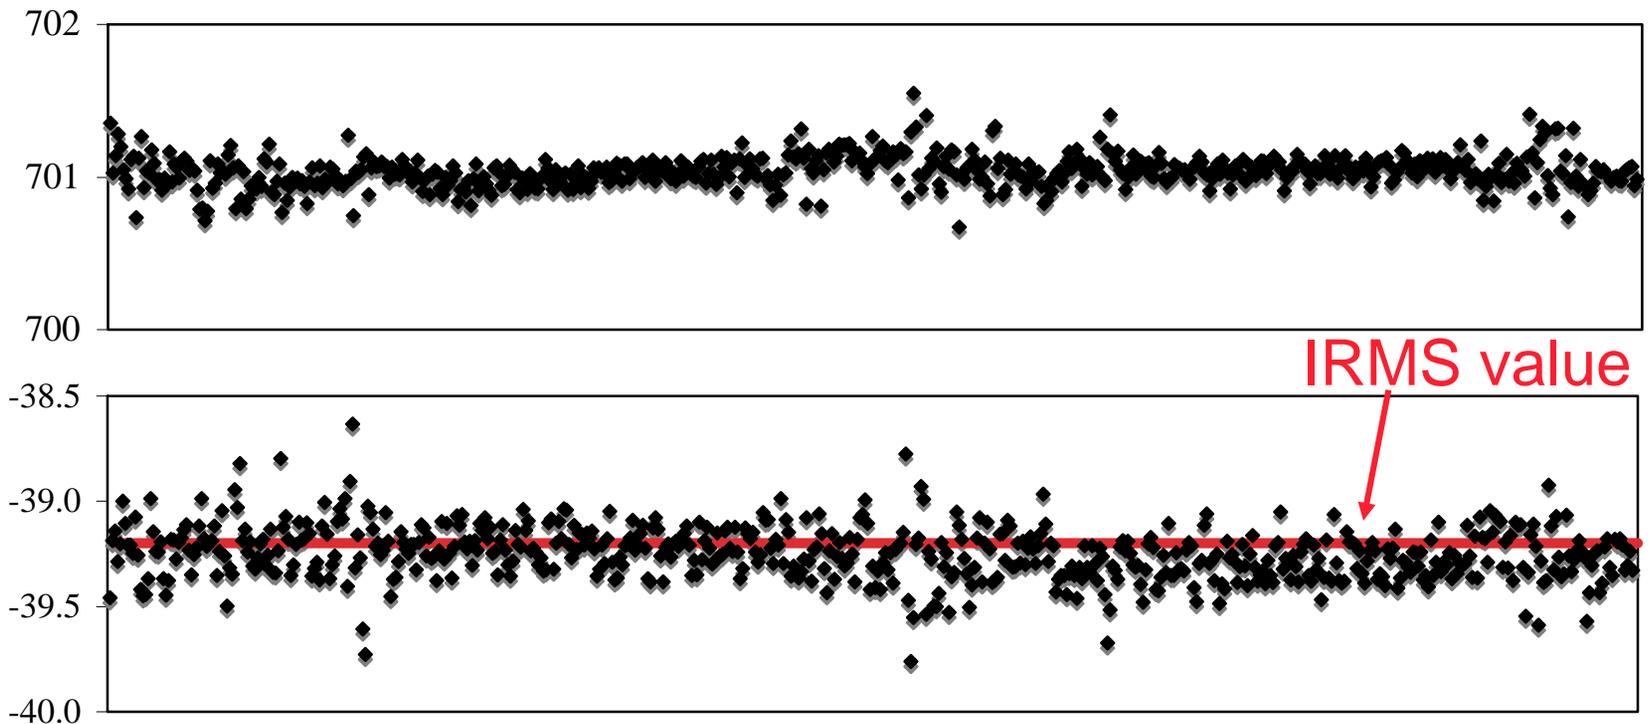

- ✓  $\text{CO}_2$  in synthetic air ( $\text{N}_2$ ,  $\text{O}_2$ , Ar)
- ✓ 0.5% certified for  $[\text{CO}_2]$
- ✓ Analysed every 2-6 months by IRMS (calibrated against IAEA reference materials)
- ✓ 3 standards are measured prior each sample for 50 s (first 30 s are discarded)

## Data quality

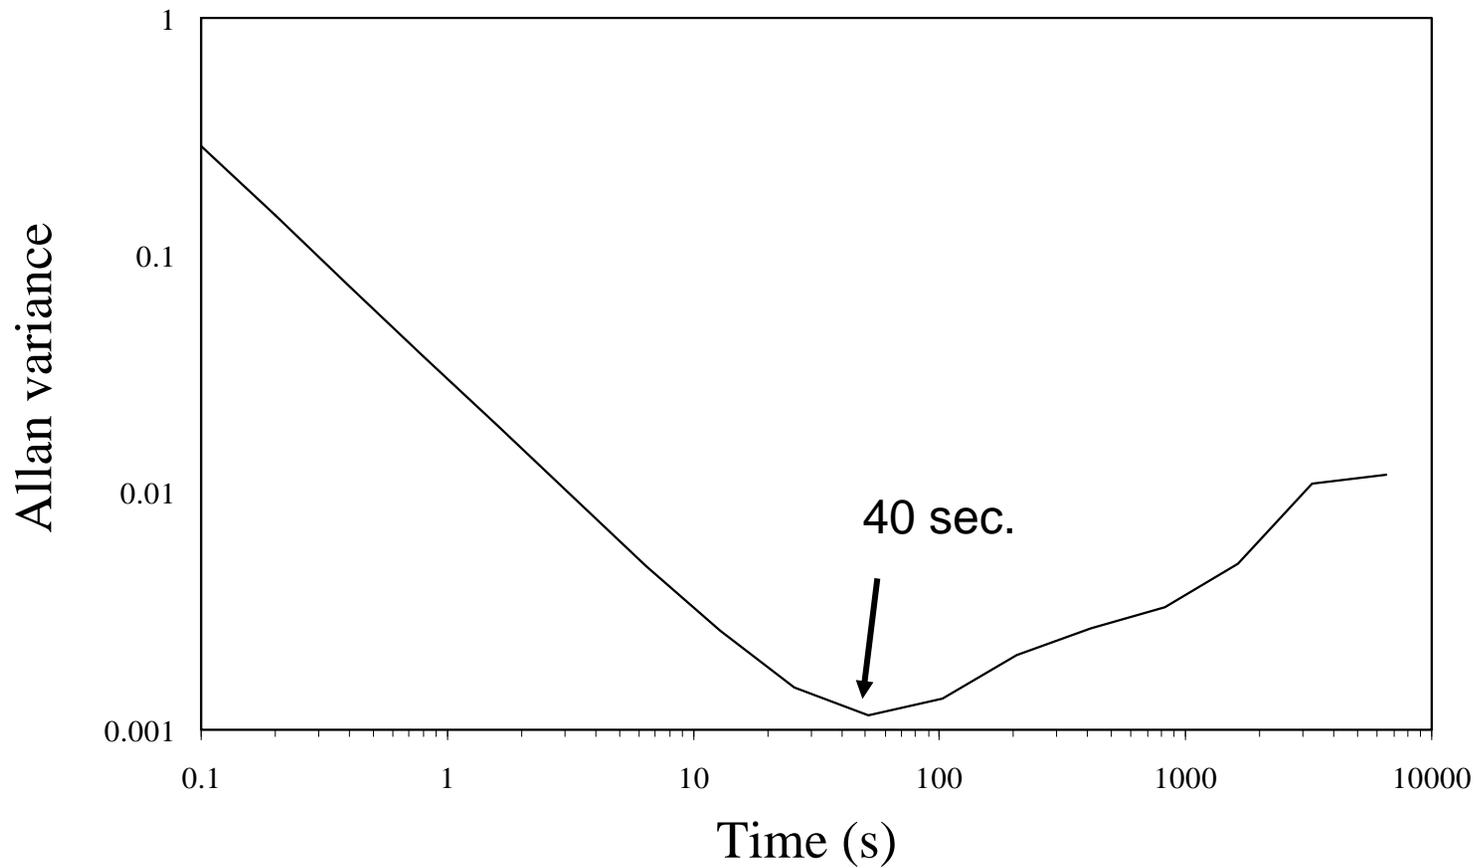

→ One 'unused' standard measured for 48 h hours every 5 minutes after measuring 2 calibration standards

$^{12}\text{CO}_2$	$^{13}\text{CO}_2$
693.59	7.450
0.10	0.001

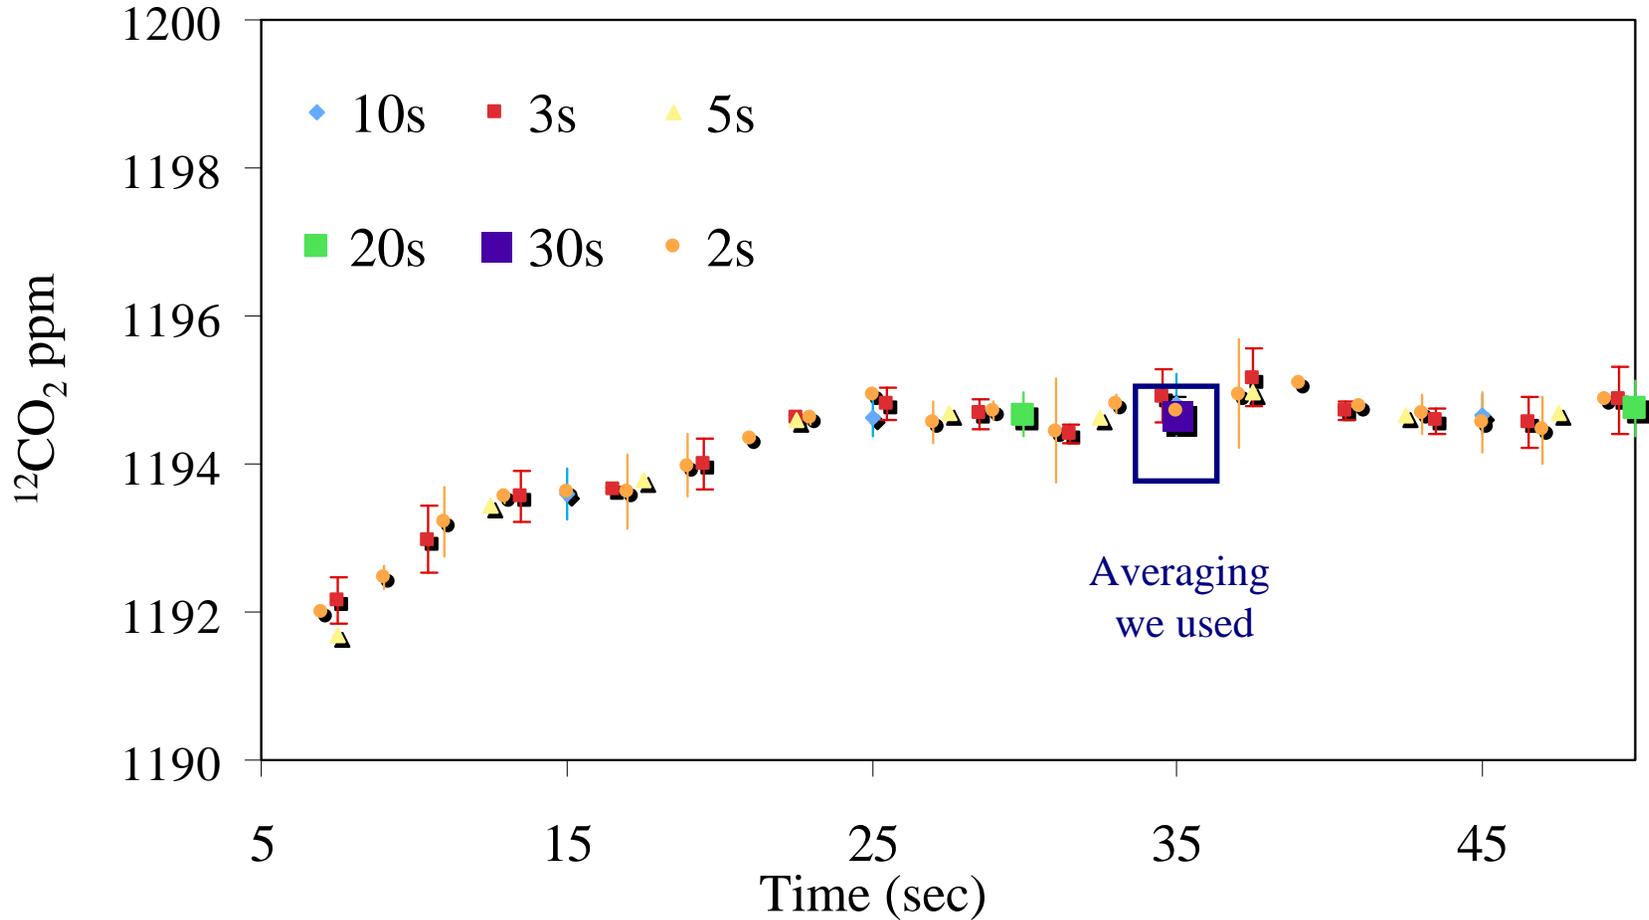

# Allan variance

# Averaging time

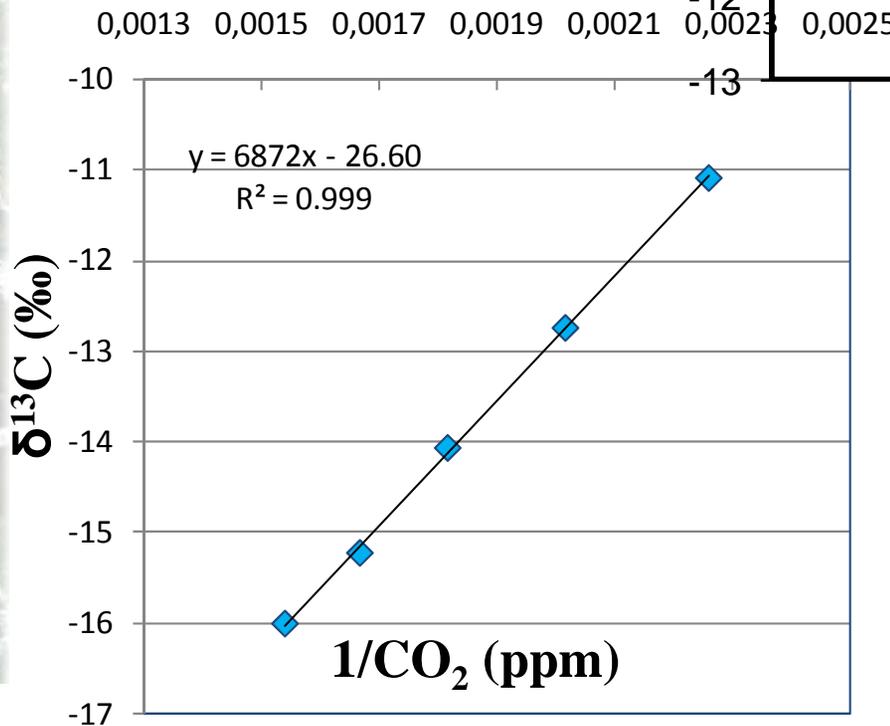

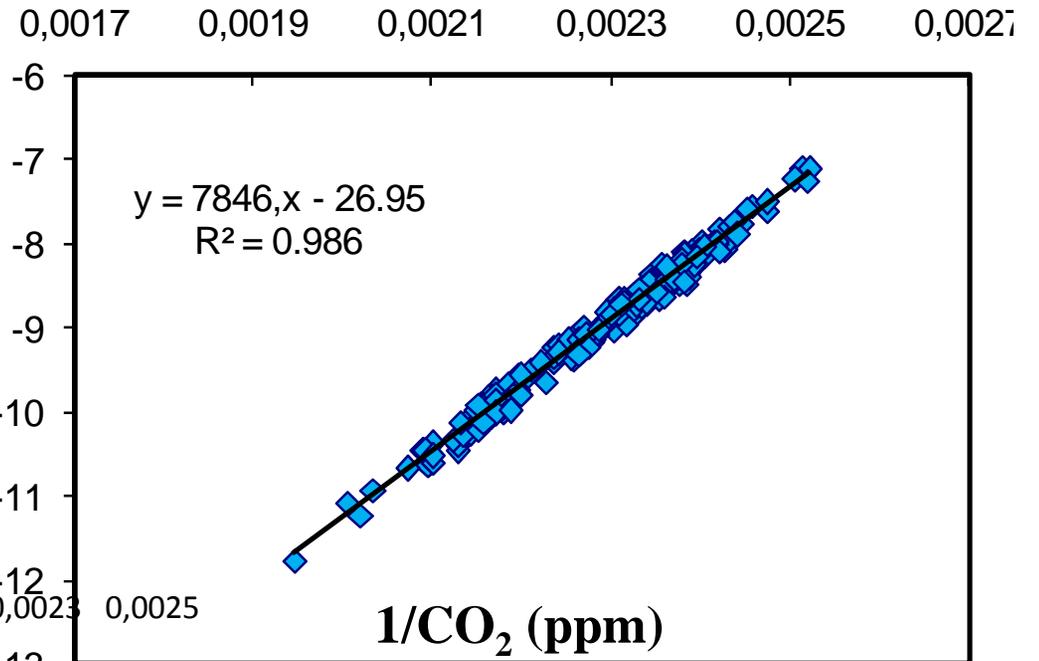

# Comparison

UMR INRA-UHP 1137  
Ecologie et Ecophysiole Forestières

➔ Keeling plots after passive accumulation of CO<sub>2</sub> in the respiration chamber (IRMS) compared to Keeling plot at the inlet of the chamber at night (TDLAS)

## Comparison

→ Comparison of soil gases measured by IRMS and by TDLAS (TGA100)
