**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# THE THIRTY-FIFTH MIDWINTER CONFERENCE OF IMMUNOLOGISTS

January 27-30, 1996  
Asilomar Conference Center  
Pacific Grove, California

Christel Uittenbogaart, Executive Director

Roberta Meyers-Elliott, Treasurer

## REGULATION OF ANTIGEN-SPECIFIC IMMUNITY

Chairpersons: Mitchell Kronenberg and Susan Swain

The Dan H. Campbell Memorial Lecture  
Saturday, January 27th, 8:00 PM

**John Kappler**

National Jewish Center  
Immunology and Respiratory Medicine  
Denver, Colorado

"T-Cell Receptor Ligand Interactions"

NAME BADGES are issued at the time of Registration and must be worn at all Conference meetings and Receptions. Guests are issued a badge at the time of their Registration for admittance to Receptions. All names remain on the CONFERENCE MAILING LIST for two years after last attendance. Register your mailing address in detail for proper delivery and please advise us of a change in address.

# CONFERENCE SCHEDULE

## *Saturday, January 27th*

8:00 PM

The Dan H. Campbell Memorial Lecture (Merrill Hall)

9:00 PM

Reception - (Nautilus and Triton Rooms)

## *Sunday, January 28th*

8:30-12:00 Noon

SESSION I - Antigen/antigen receptor interactions

4:00- 6:00 PM

Poster Session and informal discussion groups (Firelight and Kiln Rooms)

7:30-10:00 PM

SESSION II - Antigen presentation

Reception - (Firelight and Kiln Rooms)

## *Monday, January 29th*

8:30-12:00 Noon

SESSION III - Development of memory cells

4:00- 6:00 PM

Poster Session and informal discussion groups (Firelight and Kiln Rooms)

7:30-10:00 PM

SESSION IV - Lymphocyte trafficking and homing

Reception - (Firelight and Kiln Rooms)

## *Tuesday, January 30th*

8:30-12:00 Noon

SESSION V - How pathogens modify the immune response

# CONFERENCE PROGRAM

## **SESSION I**

*Sunday Morning*

8:30-12:00 Noon

*Speakers:*

### ***ANTIGEN/ANTIGEN RECEPTOR INTERACTIONS***

*Chairperson: MARK DAVIS*

**Lewis Lanier**

DNAX Research Institute, Palo Alto, California

"Recognition of MHC class I by human NK and T cells"

**Wayne Yokoyama**

Washington University, St. Louis, Missouri

"The specificity of murine natural killer cells"

**Mark Davis**

Stanford University, Palo Alto, California

"T cell receptor biochemistry, repertoire selection and structure"

**Stephen Jameson**

University of Minnesota, Minneapolis, Minnesota

"T cell receptor interactions with antagonist ligands"

# MIDWINTER CONFERENCE OF IMMUNOLOGISTS

## POSTER ABSTRACT

(Briefly summarize theme below)

NAME: AFANASSIEFF Marielle TELEPHONE: (818) 301 8264  
ADDRESS: Beckman Research Institute of City of Hope; Duarte; CA 91010

### Insights into the evolution of *B* and *Rfp-Y* - Two genetically independent *Mhc* gene clusters in the chicken.

M. Afanassieff<sup>1,3</sup>, R. Zoorob<sup>2</sup>, M.M. Miller<sup>1</sup>, F. Coudert<sup>3</sup>, and C. Auffray<sup>2</sup>.

<sup>1</sup>Beckman Research Institute, City of Hope, Duarte, CA 91010, USA; <sup>2</sup>CNRS UPR 420, BP 8, 94801 Villejuif Cedex, France; <sup>3</sup>INRA-Tours, Station de PAP, 37380 Nouzilly, France.

The chicken major histocompatibility complex (*Mhc*) genes are organized in two genetically independent systems, designated *B* and *Rfp-Y* (1), corresponding to cosmid clusters I and II/III/IV, respectively, on the molecular map of chicken *Mhc* (2, 3, Miller *et al.* submitted). *B* and *Rfp-Y* each contain both class I $\alpha$  and class II $\beta$  genes. This organization of *Mhc* genes into two systems might be of functional significance in chickens and perhaps represents an evolutionary important alternative way of organizing *Mhc* genes. To gain insight into the relationship between the *Rfp-Y* and *B* systems, we have sequenced and analysed the two class I $\alpha$  genes of *Rfp-Y* and the remaining class I $\alpha$  gene of *B*. Previously, only one of the two class I genes in the *B* system was sequenced (4). The class I genes of *B* and *Rfp-Y* are structurally dissimilar. While the two genes present within each system are highly similar to each other (about 94% homology in the coding sequence and 90% homology in the predicted protein sequence), comparisons across the systems show that the genes in each system are structurally distinct (about 76% homology in the coding sequence and 62% homology in the predicted protein sequence across the two systems). Hence, the class I $\alpha$  genes in *B* and *Rfp-Y* can be classified as members of two different gene families. The class II $\beta$  genes in *B* and *Rfp-Y* were shown earlier to also be members of two different gene families (5). These data indicate that *B* and *Rfp-Y* may have arisen by duplication and translocation of an entire gene region, followed by an additional duplication of individual class I and class II genes. We are currently analysing the expression of *B* and *Rfp-Y* class I $\alpha$  genes in several tissues of adult chickens by RT-PCR to determine if the organizational and structural separation of the two system is associated with a functional specialization as well. The first results show that the two class I genes of *B* system and at least one of the two class I gene of the *Rfp-Y* system are expressed.
