HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Typification of names and their taxonomic assignment within the *Brachypodium distachyon* complex (Poaceae)

Errol Véla (1), Nicolas Bianchin (2), Daniel Pavon (3), Thomas Croze (4), Sami Youssef (1,5), Jean-Marc Tison (6), Antonio Díaz-Pérez (7,8) & Pilar Catalán (8)

The *Brachypodium distachyon* complex includes (at least) three annual species, whose taxonomic identities have recently been demonstrated by cytological, molecular and morphological data (Catalan et al. 2012 - *Ann. Bot.*, 109: 305-405).

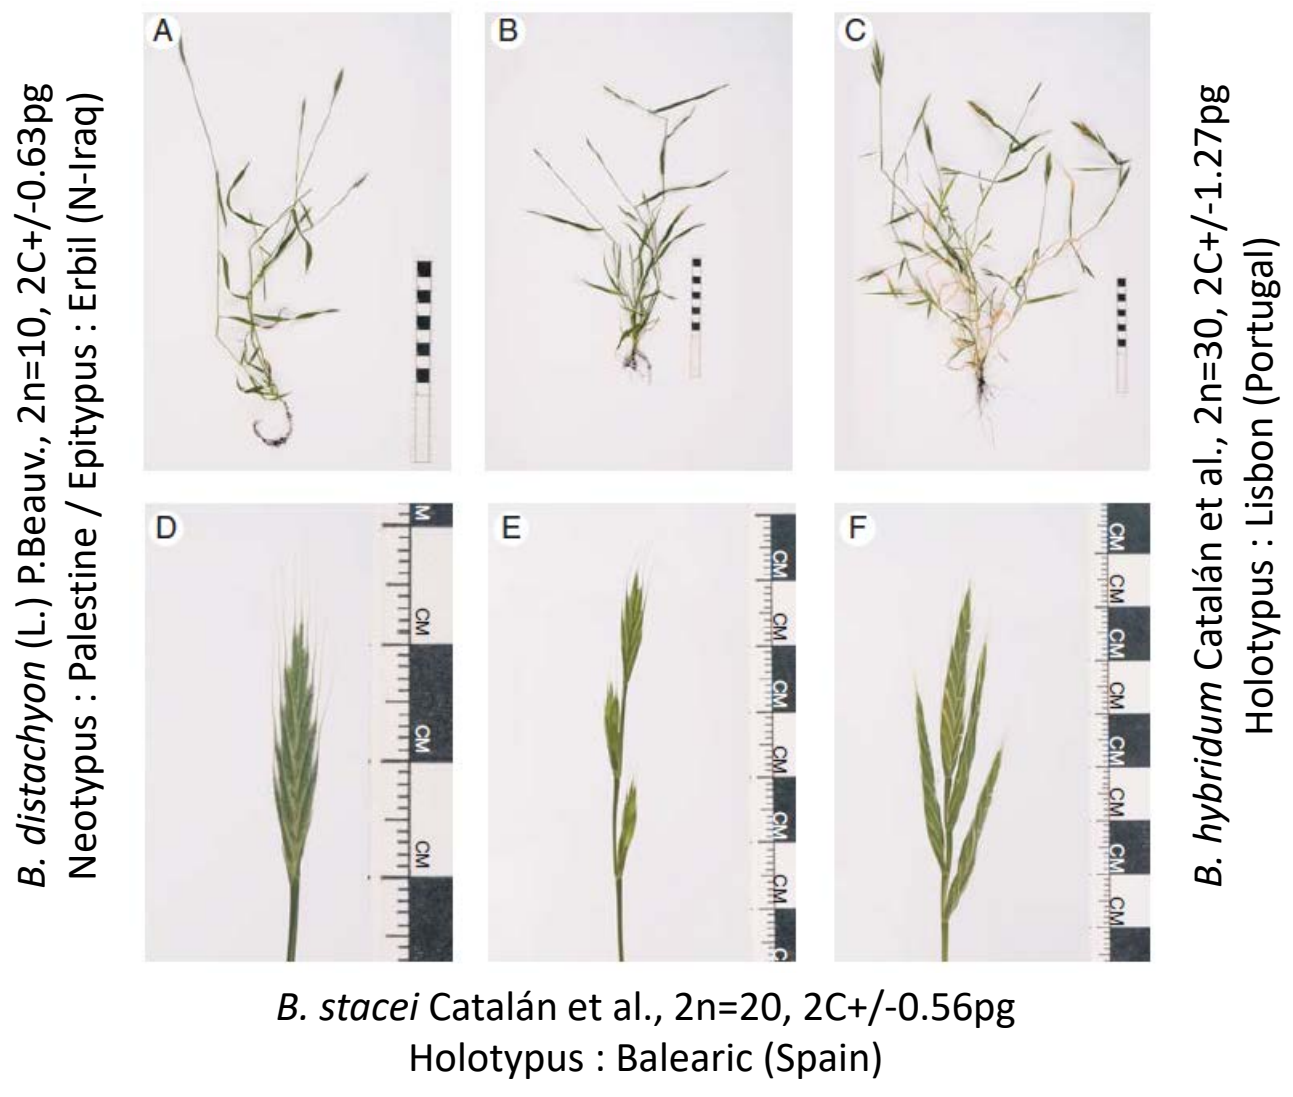

The initial taxonomic studies contained no nomenclatural revision of the fifteen or so heterotypic, valid and legitimate synonyms at species rank [wcp.science.kew.org/synonymy.do?name_id=399871, modified]

Considering the impossibility to study molecularly the herbarium type materials of these names, this precluded the analysis of these samples and the authors needed to describe two species as new (Catalán et al., 2012, *Ann. Bot.*, 109: 305-405).

An improvement of the morphological methods, including new criteria relevant both in situ and in herbarium, now allows us to do this nomenclatural synthesis, according to the current taxonomic treatment [Véla, Bianchin, Croze, Pavon & Tison, unpubl.].

<i>Brachypodium distachyon</i> (L.) P.Beauv., Ess. Agrostogr.: 101, 155 (1812).
<i>Festuca monostachyos</i> Lam., Encycl. 2: 461 (1788); <i>F. monostachya</i> Poir., Voy. Barbarie 2: 98 (1789), nom. illeg. !
<i>Festuca rigida</i> Roth, Catal. Bot. 1: 12 (1797) ≡ <i>Triticum asperum</i> DC., Cat. Pl. Horti Monsp.: 153 (1813), nom. nov. ≡ <i>Triticum asperum</i> DC., in Link, Handbuch 1: 18 (1829), orth. var.
<i>Festuca pseudistachya</i> Koeler, Descr. Gramin.: 270 (1802).
<i>Triticum brevisetum</i> DC., Cat. Pl. Horti Monsp.: 153 (1813).
<i>Bromus pentastachyos</i> Tineo, Pl. Rar. Sicil.: 4 (1817).
<i>Bromus paradoxus</i> C.Presl, Fl. Sicul. 1: XLV (1826).
<i>Brachypodium macrostachyum</i> Besser in J.A.Schultes & J.H.Schultes, Mant. 3: 651 (1827).
<i>Brachypodium megastachyum</i> Besser in J.A.Schultes & J.H.Schultes, Mant. 3: 651 (1827).
<i>Triticum flabellatum</i> Tausch, Flora 20: 117 (1837).
+<i>Triticum poliens</i> Tausch, Flora 20: 117 (1837). [unresolved]
<i>Triticum subtile</i> Fisch., C.A.Mey. & Avé-Lall., Index Seminum (LE, Petropolitanus) 10: 59 (1845).
<i>Brachypodium geniculatum</i> K.Koch, Linnaea 21: 422 (1848).
<i>Triticum schimperi</i> Hochst. ex A.Rich., Tent. Fl. Abyss. 2: 441 (1850).
<i>Festuca tauschii</i> Steud., Syn. Pl. Glumac. 1: 317 (1854).
<i>Brachypodium platystachyum</i> Huber, Cat. Graines 1868: 8 (1868), nom. nudum !
<i>Brachypodium x pau</i> Sennen, Bol. Soc. Aragonesa Ci. Nat. 10: 177 (1911).

New criteria compared to Catalan et al. 2016	<i>B. cf. distachyon</i> (FR, IT, TN, DZ) ≠ IK	<i>B. cf. hybridum</i> (ES, FR, IT, TN, DZ; LB) + IK	<i>B. cf. stacei</i> (ES, FR, IT, TN, DZ; LB)
Top of the culm :	smooth or slightly rough downward	+/- smooth	rough upward
Top of the culm :	thin (<1.0 mm)	slightly thickened	thickened (>1.2mm)
Leaf-blades margin :	ciliate (+/--long)	ciliate (+/--short)	not ciliate
Leaf-blades margin :	both straight	straight (rarely one wavy)	one wavy, other straight
Leaf-blade underside :	glabrescent except bristle	mixed (short bristle + lax fluff)	fluffy hair
Veins on leaf-blade topside :	7-13, embossed and visible to the eye	11-21, dimorphic (3-5 visible, other inconspicuous)	17-31, inconspicuous (visible with a magnifier)
Inflorescence	dense (interspace < glumes)	+/- lax (interspace)	lax (interspace > ½ spikelet)
Mature spikelets	spread	+/- erected	imbricated

Morphological details of *B. distachyon* (2n=10) [SE-France] vs *B. hybridum* (2n=30) [N-Algeria / SE-France] vs *B. stacei* (2n=20) [SE-France]

Material & Methods : Fresh French, Algerian-Tunisian and Iraqi material from the three species has been calibrated with DNA genome size (2C) and molecular barcoding (ITS + trnLF).

1) *Festuca rigida* Roth (B-W 02109 2)

2) LINN 93.48 vs JE00013261

3) *B. platystachyum* vs *B. hybridum* [Algiers, same soil, same locality]

4) *B. distachyon* : from SE-France from N-Iraq

Four main results :

- 1) *Brachypodium stacei* has got a prioritary name *B. rigidum* (Roth) Link [1821] : to be rejected ?
- 2) The lectotypus (LINN 93.48) of *B. distachyon* (L.) P.Beauv. is morphologically a *B. hybridum* ! : to be conserved ?
- 3) Another hybrid species (not *B. hybridum* s.s.) has morphology of *B. platystachyum* (Coss.) : missing combination
- 4) Middle Eastern (epitypus) and Western Medit. *B. distachyon* hasn't got the same morphology : cryptic species ?
