**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# Functional Network of the City

Maxime Lenormand

CitiNet'14, Lucca, Italy

September 25, 2014

# Motivation

Comparison of land use patterns across cities

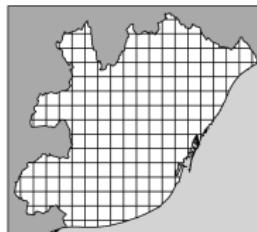

- ▶ Network approach to detect land use using mobile phone data
- ▶ Spatial organization (entropy, Ripley's K...)
- ▶ Land use model
- ▶ Mixing of land use

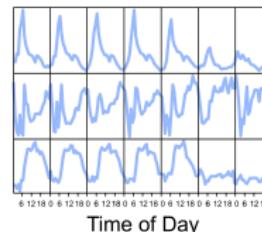

# Method used to extract the network

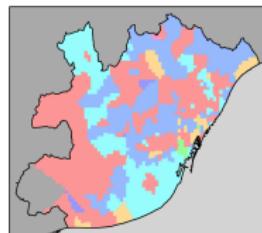

Metropolitan Area

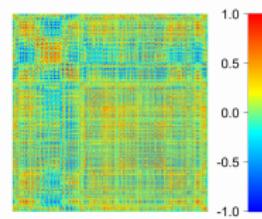

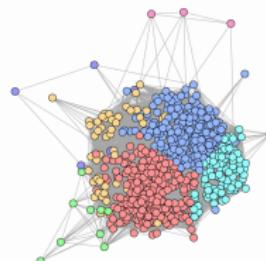

Recordings sites

Signals

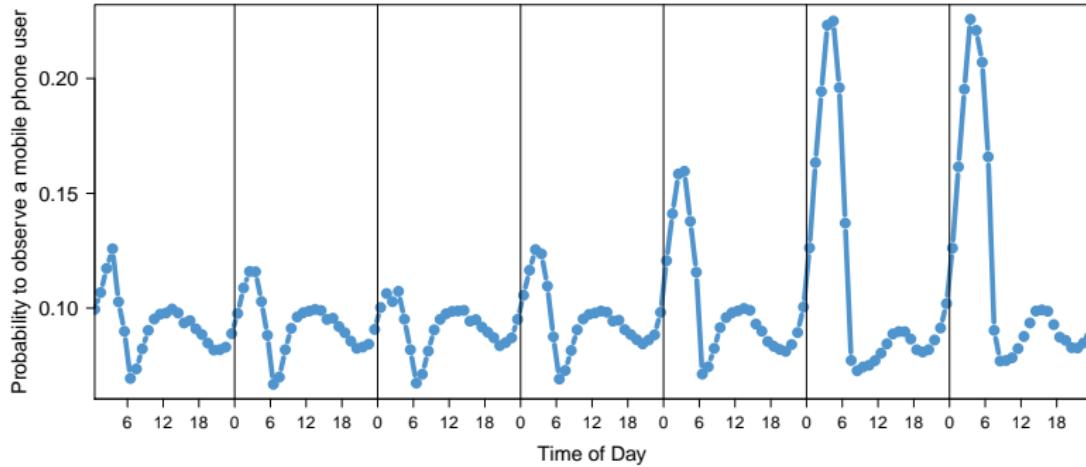

Functional Network

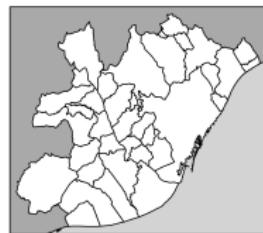

Correlation Matrix

# Method used to extract the network

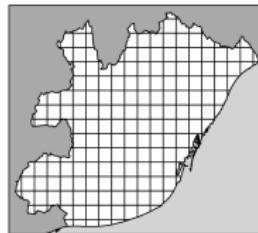

Probability to observe a mobile phone user in a given cell at a given time

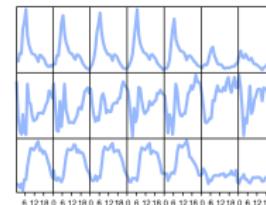

# Method used to extract the network

Metropolitan Area

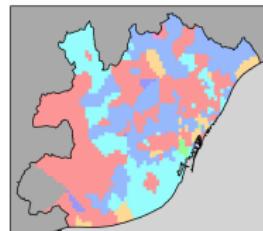

Recordings sites

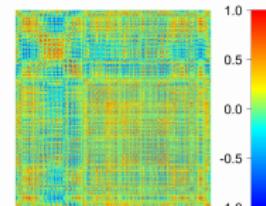

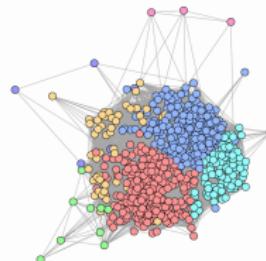

Time of Day

Signals

Functional Network

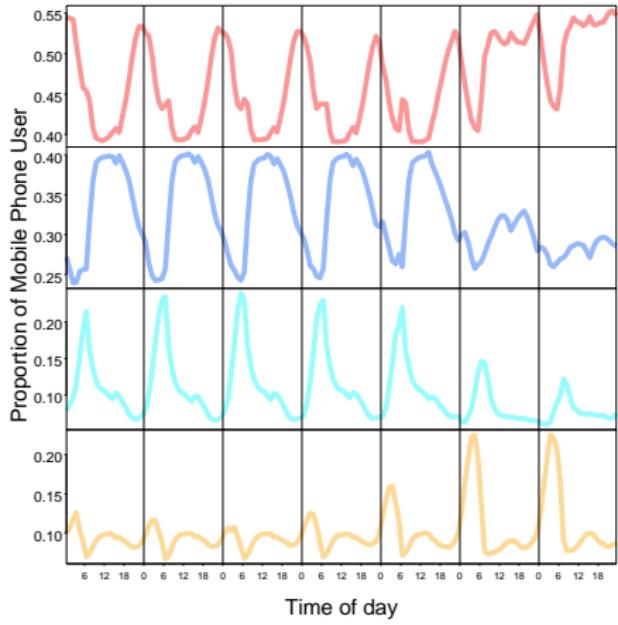

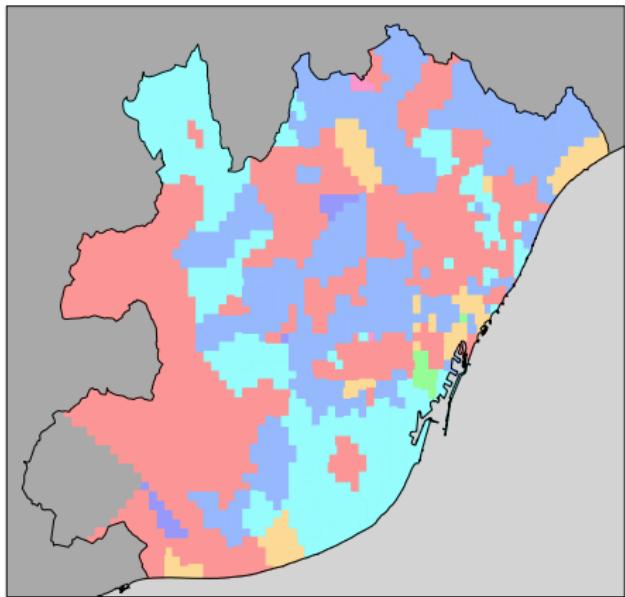

Correlation Matrix

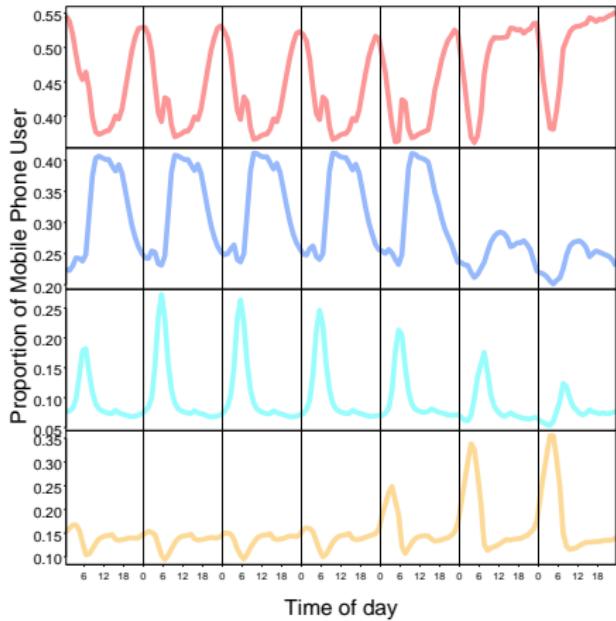

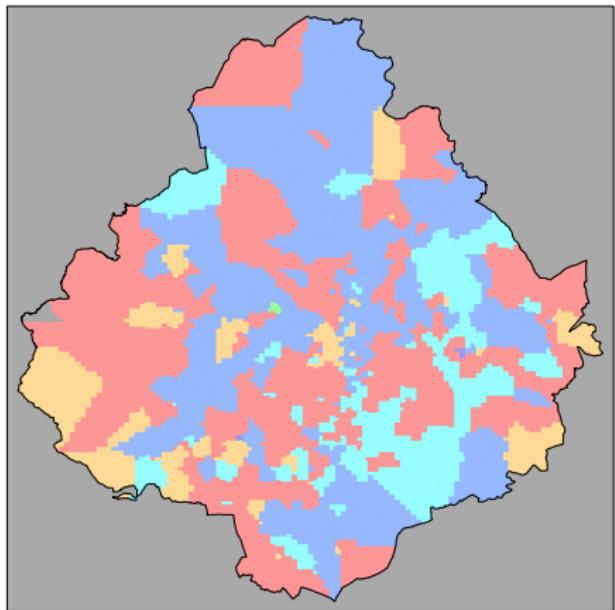

# Land use patterns

Barcelona (PGP = 60%)

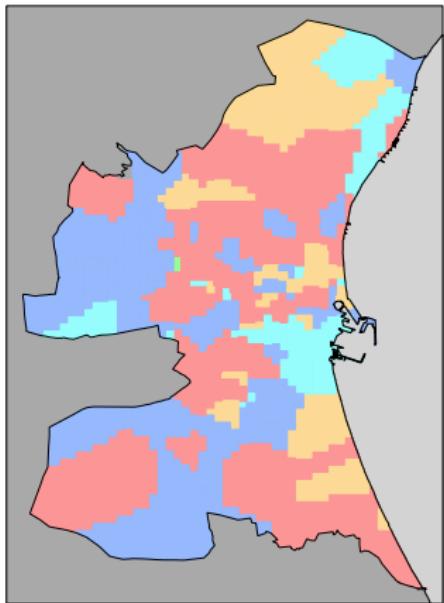

# Land use patterns

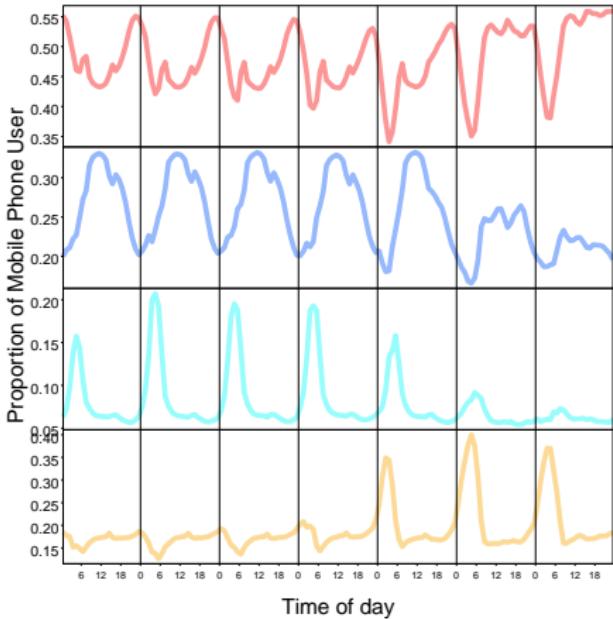

Madrid (PGP = 65%)

# Land use patterns

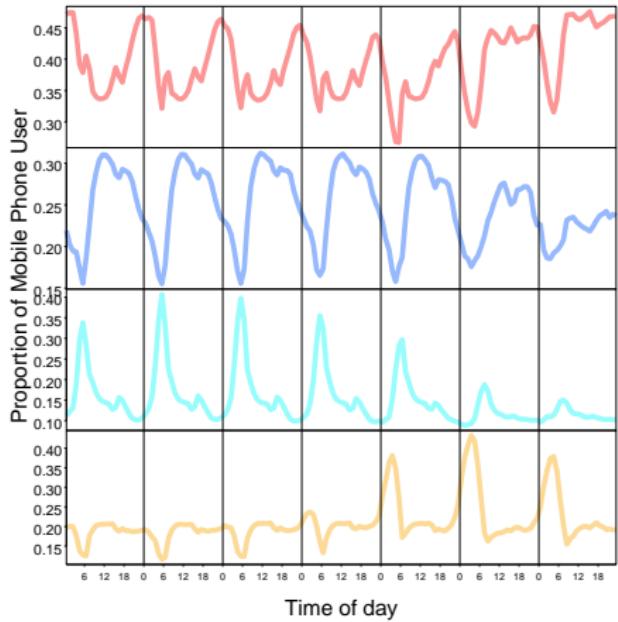

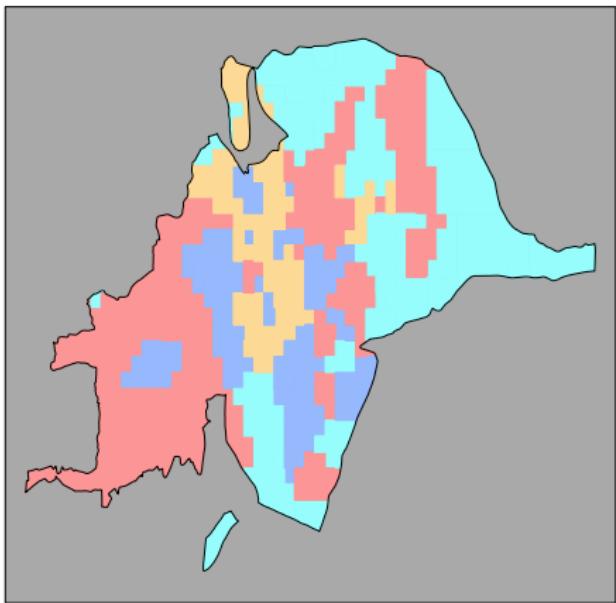

## Valencia

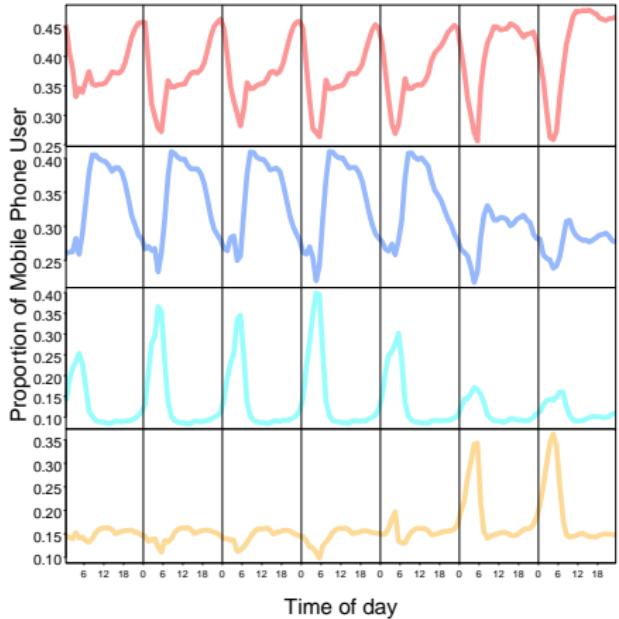

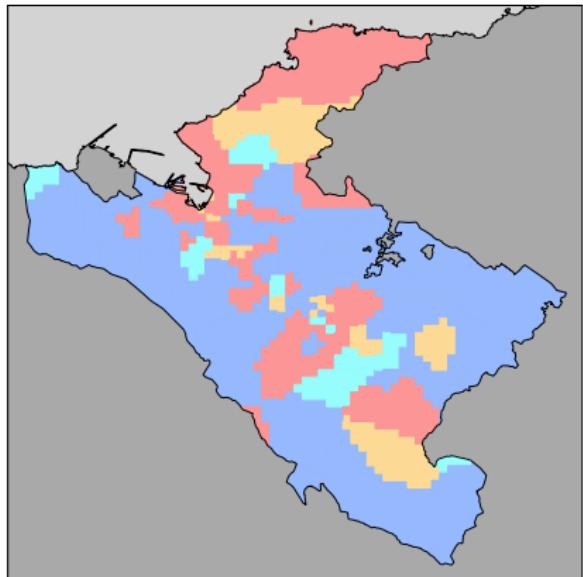

# Land use patterns

Sevilla

# Land use patterns

Bilbao

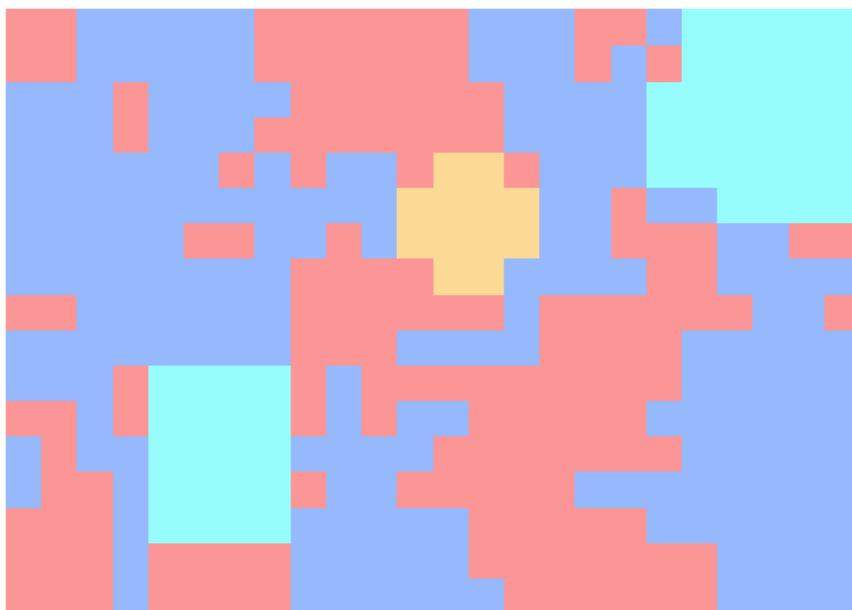

# Spatial organization of land use

## Three measures of spatial heterogeneity

- ▶ Distribution of the distance between the cells and the city center
- ▶ Ripley's K
- ▶ Entropy index

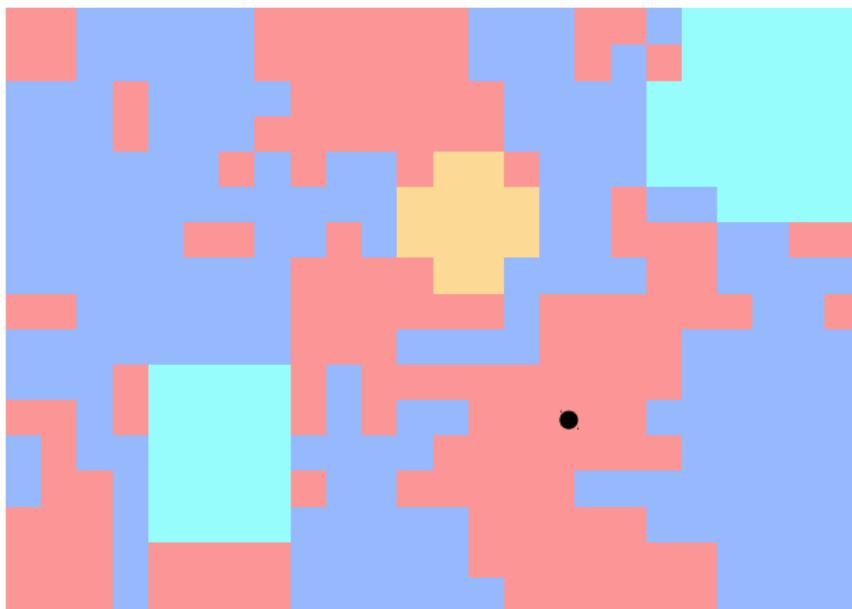

# Spatial organization of land use

## Distance to the city center

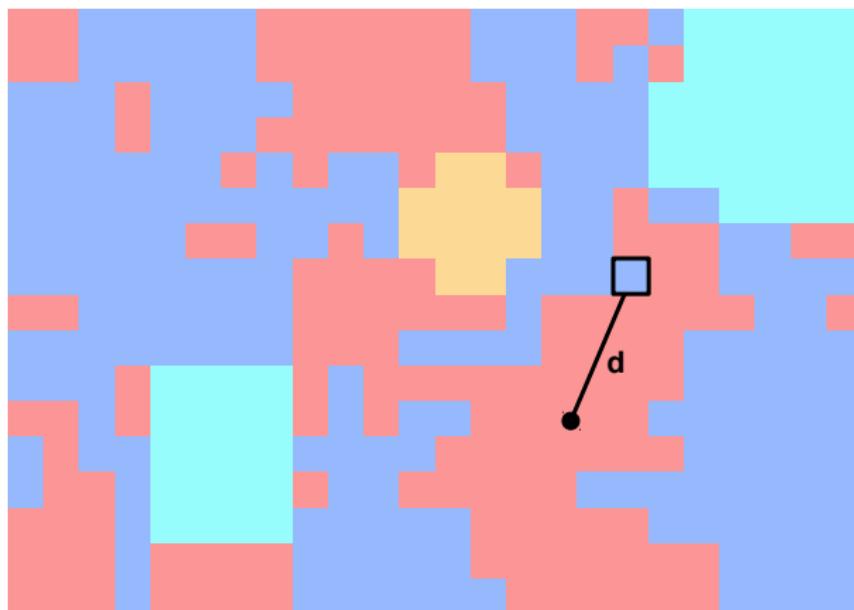

# Spatial organization of land use

## Distance to the city center

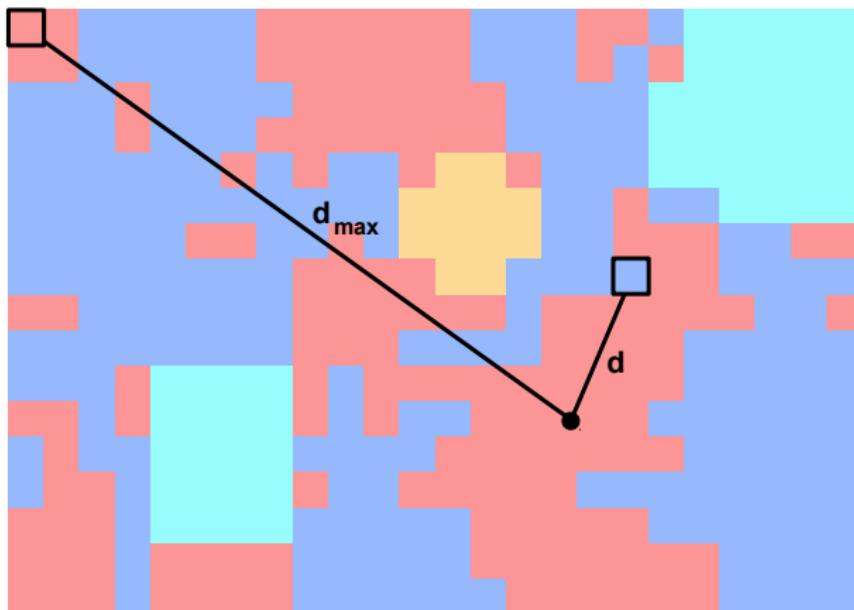

# Spatial organization of land use

## Distance to the city center

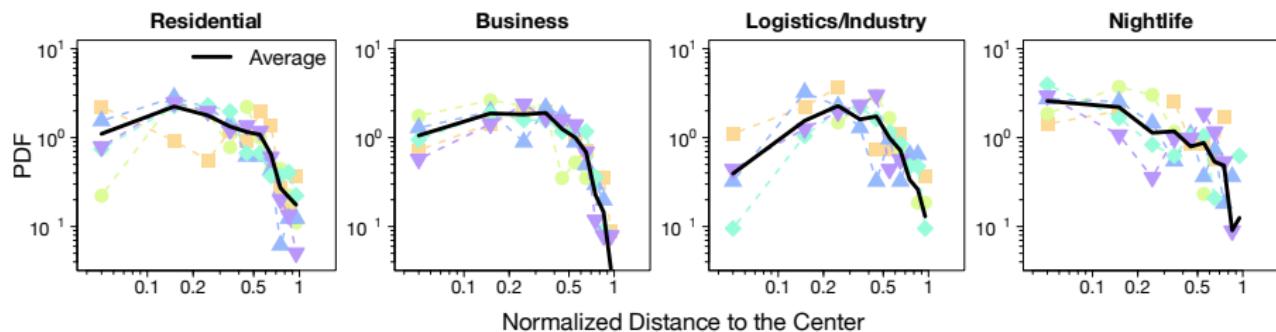

# Spatial organization of land use

## Distance to the city center

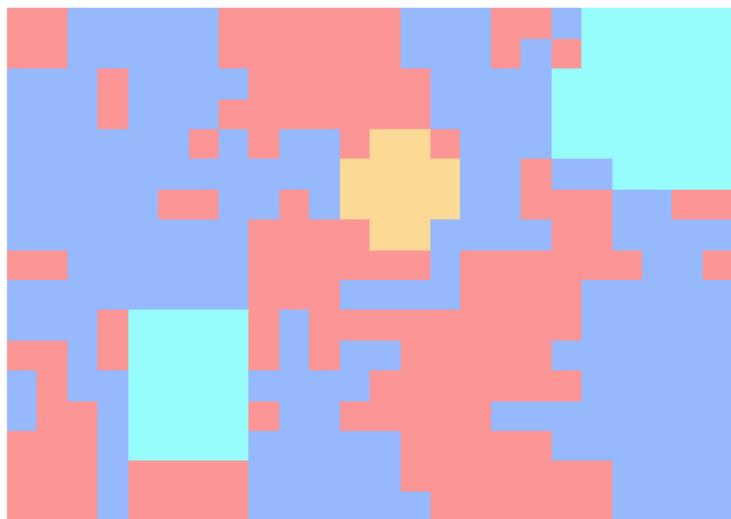

# Spatial organization of land use

## Distance to the city center

# Spatial organization of land use

## Ripley's K

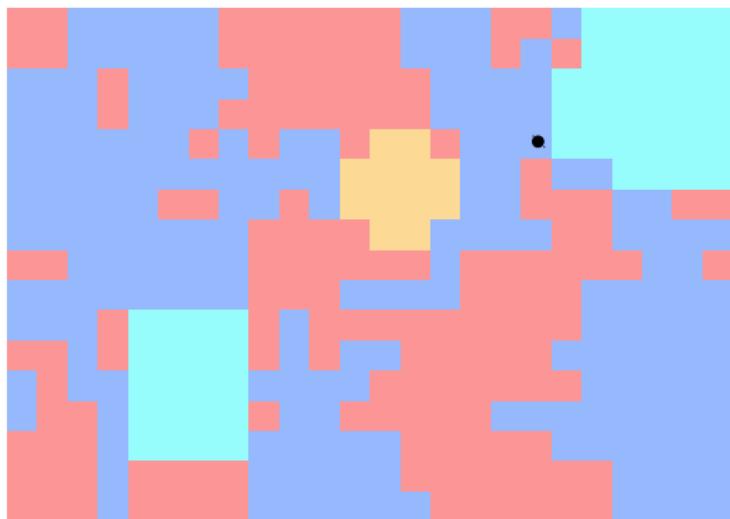

$$K(r) = \frac{A}{n^2} \sum_{i=1}^n N_i(r)$$

$$\hat{K}(r) = K(r)/K(1)$$

# Spatial organization of land use

## Ripley's K

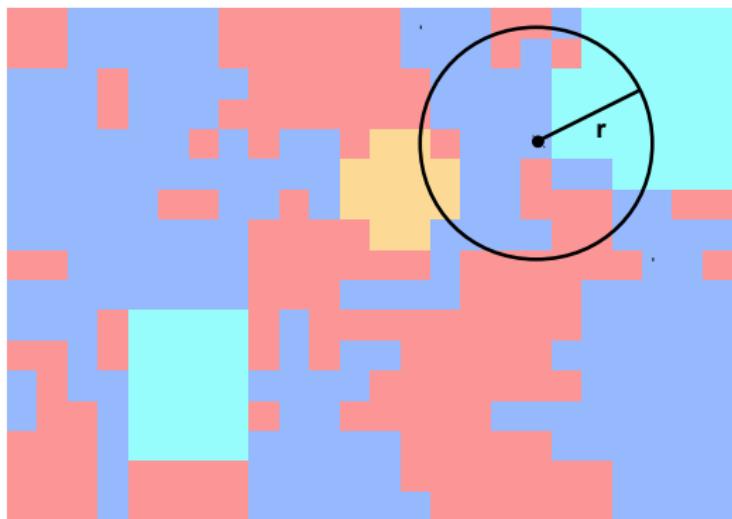

$$K(r) = \frac{A}{n^2} \sum_{i=1}^n N_i(r)$$

$$\hat{K}(r) = K(r)/K(1)$$

# Spatial organization of land use

## Ripley's K

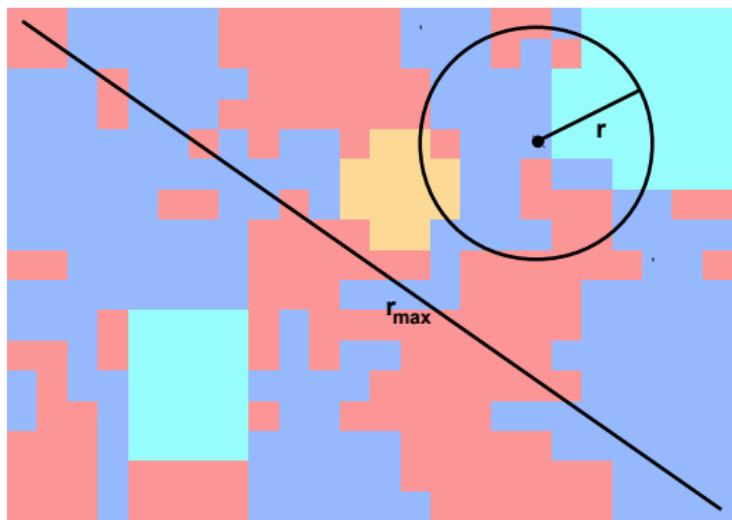

$$K(r) = \frac{A}{n^2} \sum_{i=1}^n N_i(r)$$

$$\hat{K}(r) = K(r)/K(1)$$

# Spatial organization of land use

## Ripley's K

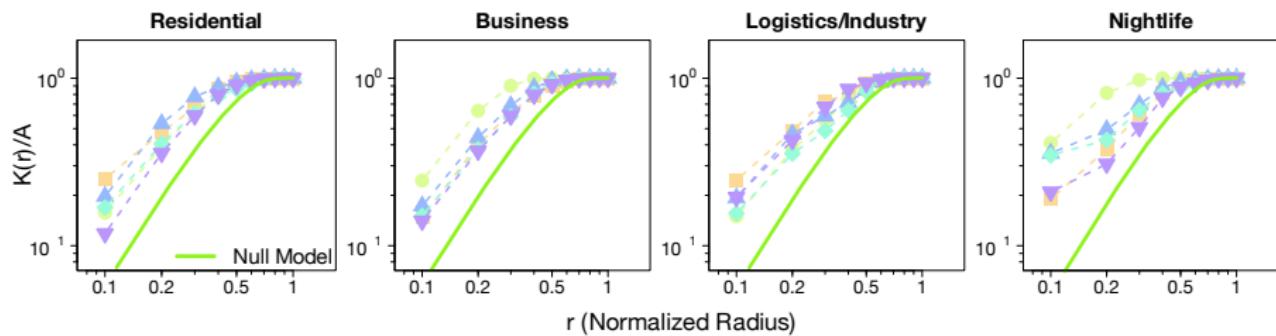

$$K(r) = \frac{A}{n^2} \sum_{i=1}^n N_i(r)$$

$$\hat{K}(r) = K(r)/K(1)$$

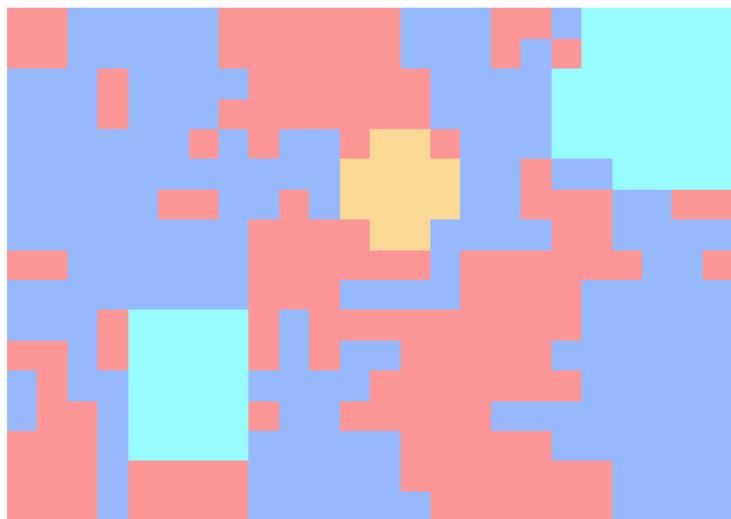

# Spatial organization of land use

## Ripley's K

# Spatial organization of land use

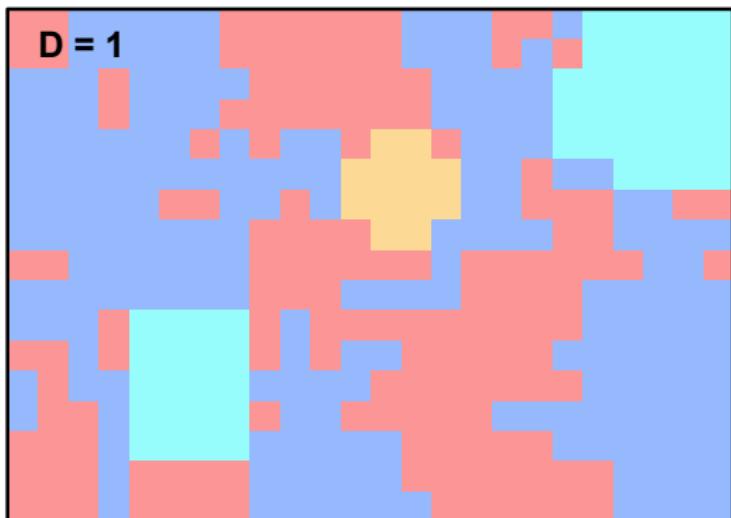

## Entropy index

$$E_i = - \sum_{k=1}^4 f_i^k \ln f_i^k$$

$$E(D) = \frac{1}{D^2} \sum_{i=1}^{D^2} E_i$$

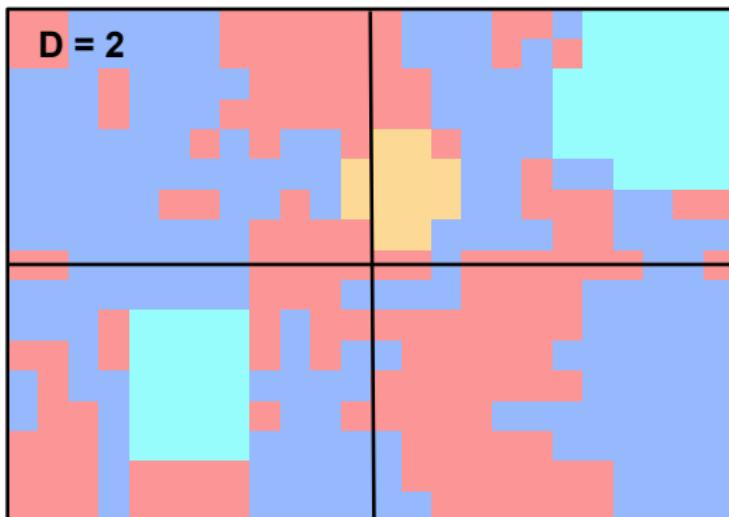

# Spatial organization of land use Entropy index

$$E_i = - \sum_{k=1}^4 f_i^k \ln f_i^k$$

$$E(D) = \frac{1}{D^2} \sum_{i=1}^{D^2} E_i$$

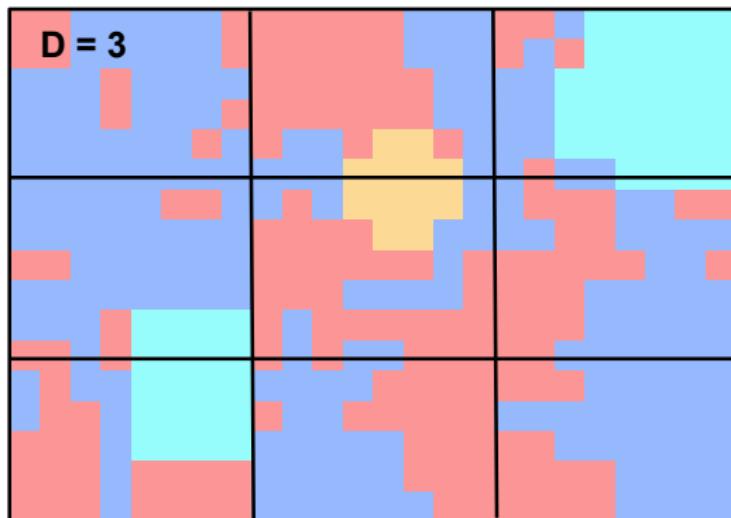

# Spatial organization of land use Entropy index

$$E_i = - \sum_{k=1}^4 f_i^k \ln f_i^k$$

$$E(D) = \frac{1}{D^2} \sum_{i=1}^{D^2} E_i$$

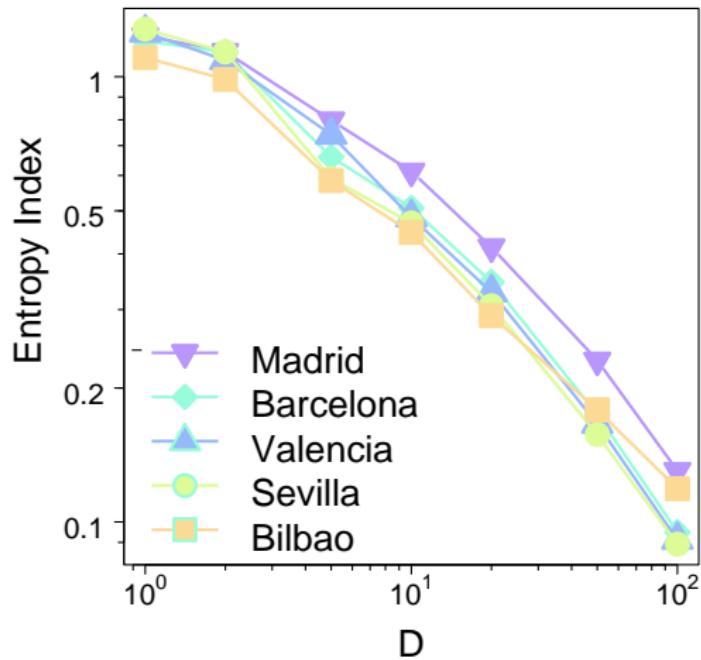

# Spatial organization of land use Entropy index

$$E_i = - \sum_{k=1}^4 f_i^k \ln f_i^k$$

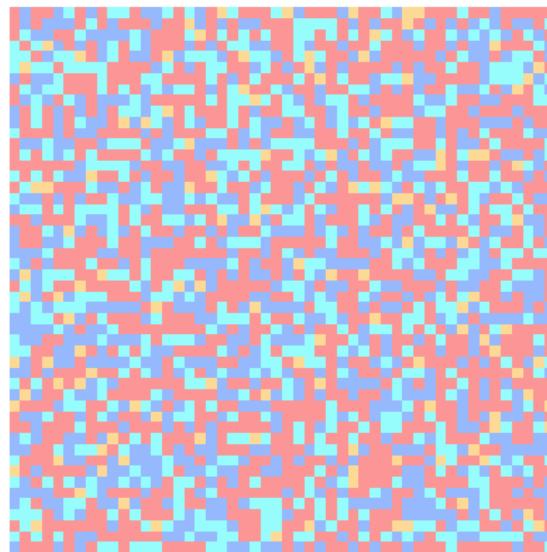

$$E(D) = \frac{1}{D^2} \sum_{i=1}^{D^2} E_i$$

# Spatial organization of land use Entropy index

# Land use model

## Initial state

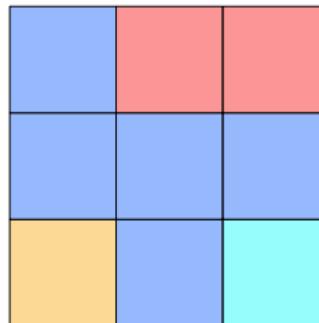

# Land use model

## Satisfaction index

Satisfaction index  $S_{ij}$  of a cell is based on the fraction of land use type among its neighbors

$$p = (p_1, p_2, p_3, p_4)$$

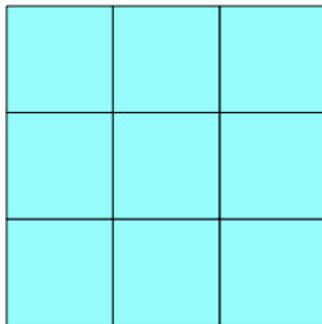

# Land use model

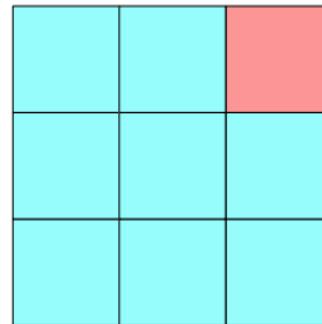

## Satisfaction index

### Logistics/Industry

$$S_{ij} = p_3$$

$$S_{ij} = 0$$

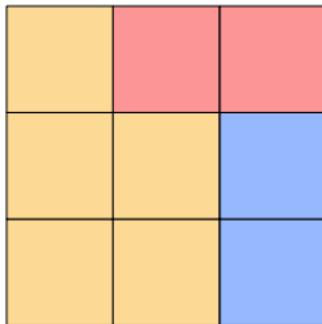

# Land use model

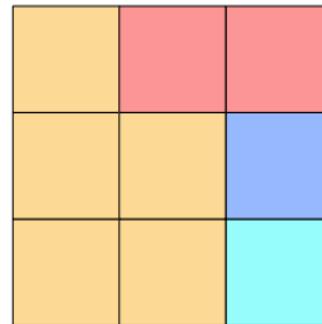

## Satisfaction index

### Nightlife

$$S_{ij} = p_4$$

$$S_{ij} = 0$$

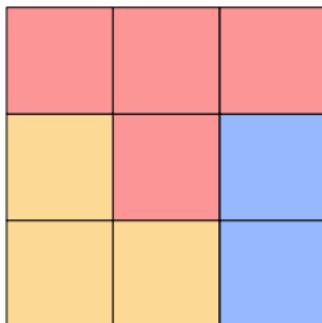

# Land use model

## Satisfaction index

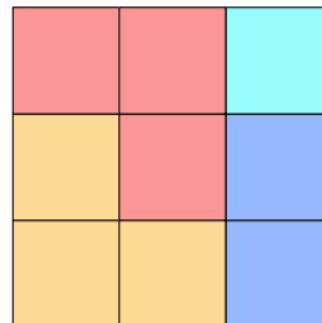

### Residential

$$\text{rand}() \geq \gamma$$

$$S_{ij} = p_1$$

$$S_{ij} = 0$$

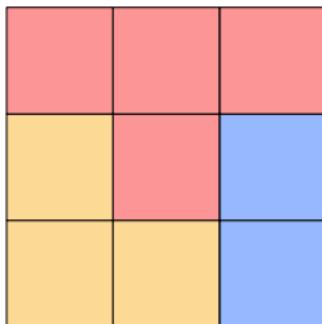

# Land use model

## Satisfaction index

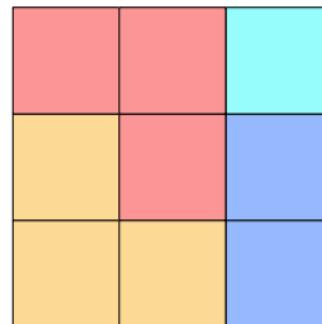

### Residential

$$\text{rand}() < \gamma$$

$$S_{ij} = 1$$

$$S_{ij} = 0$$

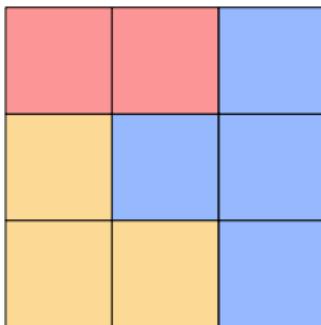

# Land use model

## Satisfaction index

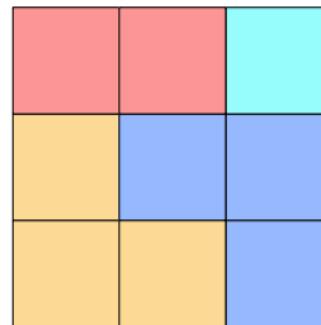

### Business

$$\text{rand}() \geq \gamma$$

$$S_{ij} = p_2$$

$$S_{ij} = 0$$

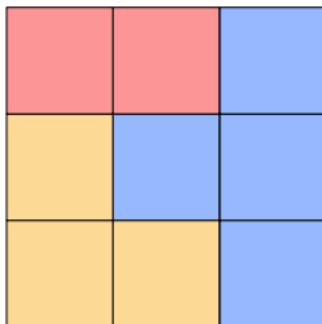

# Land use model

## Satisfaction index

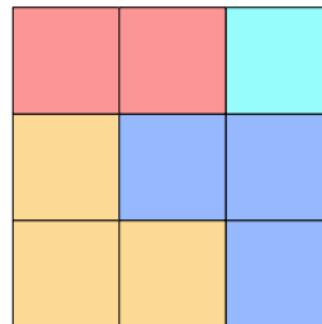

### Business

$$\text{rand}() < \gamma$$

$$S_{ij} = 1$$

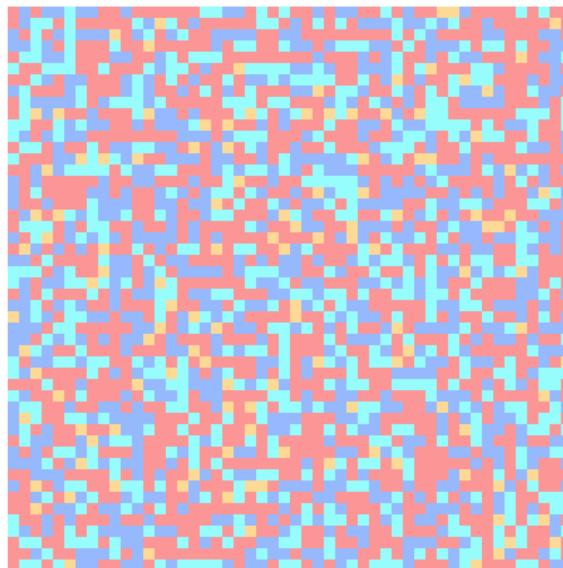

$$S_{ij} = 0$$

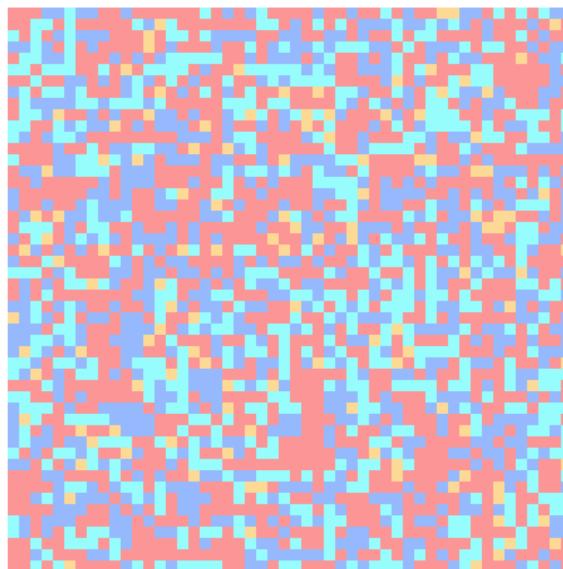

# Land use model Algorithm

$t = 1$

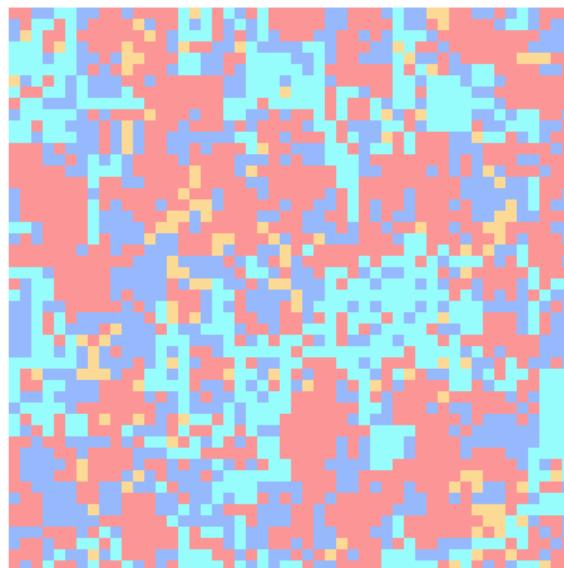

# Land use model Algorithm

**$t = 1,000$**

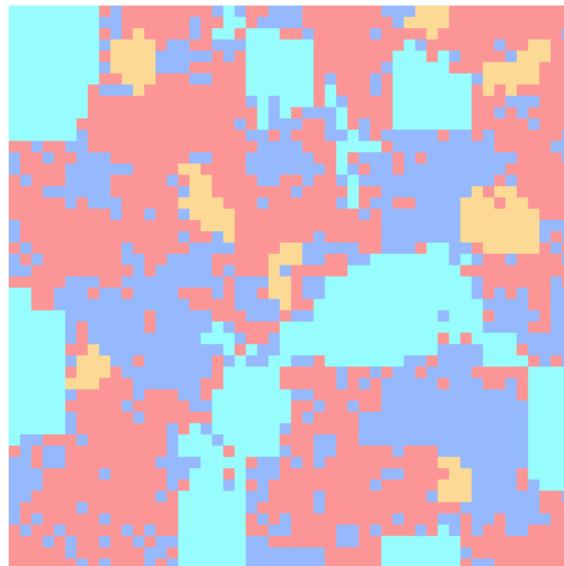

# Land use model Algorithm

$t = 10,000$

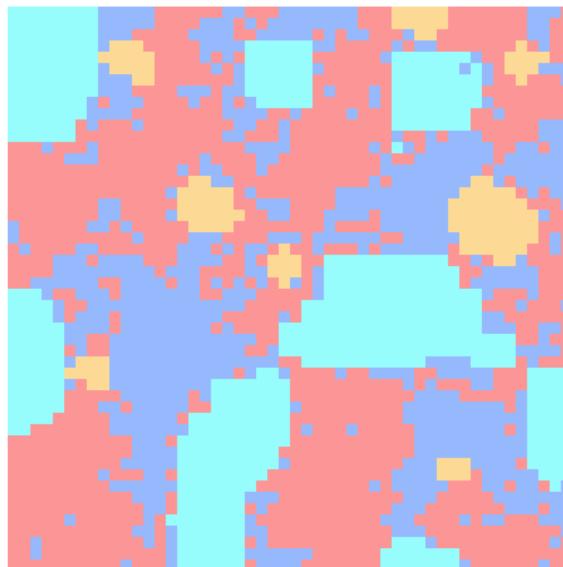

# Land use model Algorithm

$t = 100,000$

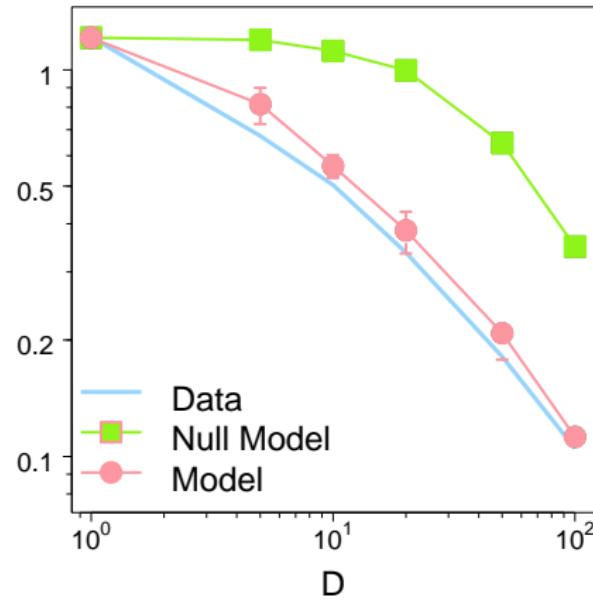

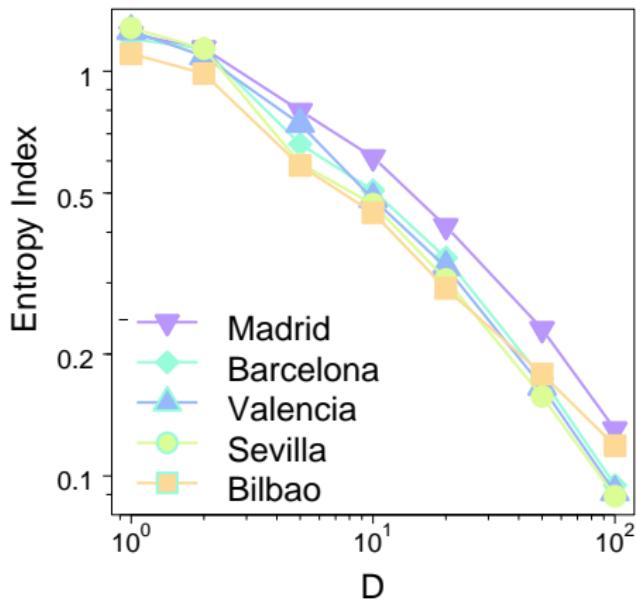

# Land use model Algorithm

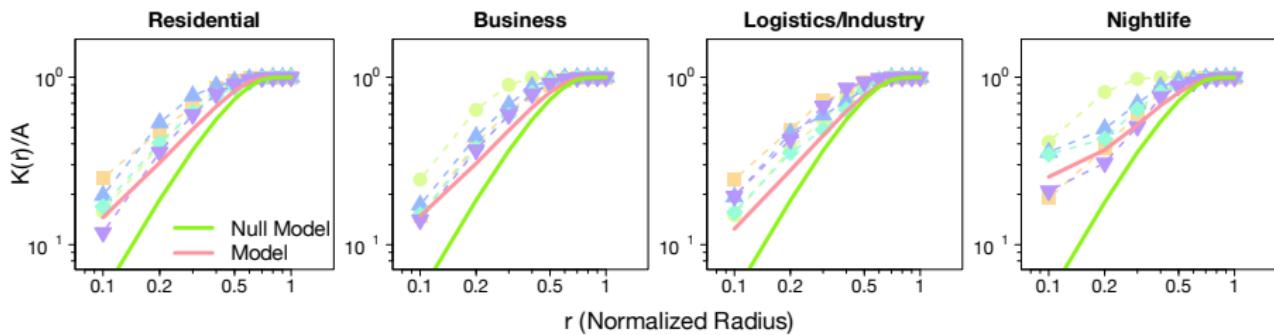

$t = 300,000$

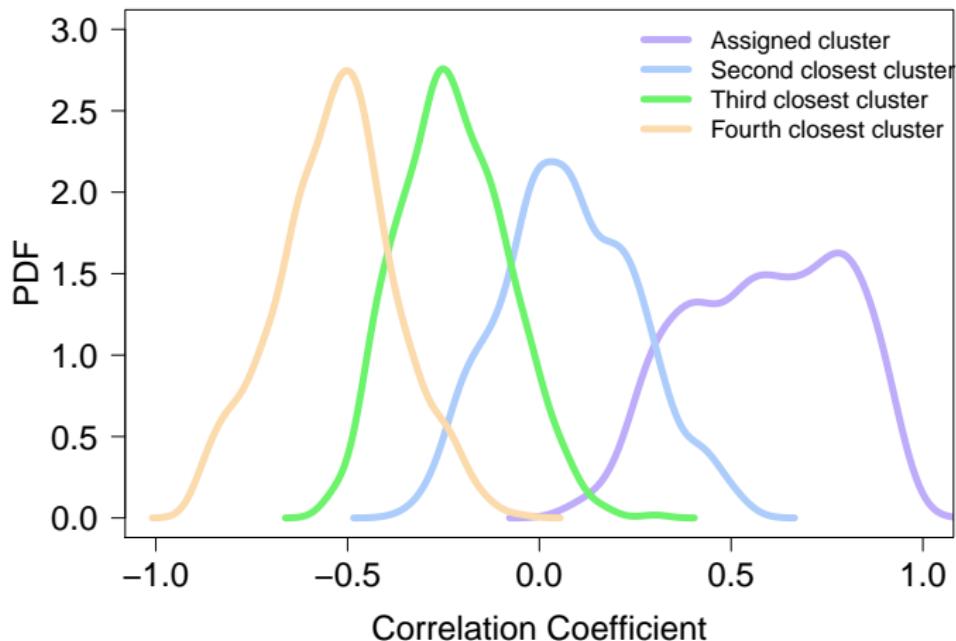

# Land use model Calibration of $\gamma$

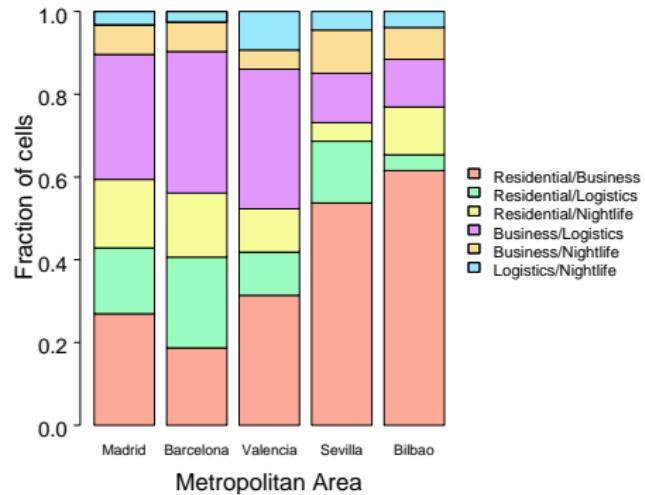

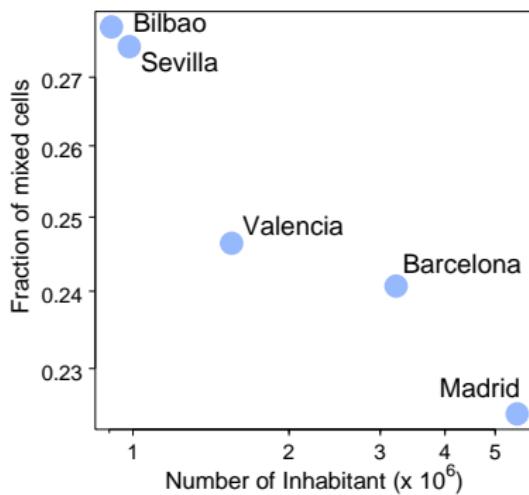

# Land use model Ripley's K

# Mixing of land use

# Mixing of land use

# Conclusions

- ▶ Network approach to detect land use using mobile phone data
- ▶ Four land use types (Residential, Business, Logistics, Nightlife)
- ▶ Similarities in the spatial organization of land use across cities
- ▶ Land use model based on attraction-repulsion rules between land use
- ▶ Mixing of land use
