Abstract

Seven potential controversial topics in agroecology are presented and discussed from a European perspective. Agroecology Europe (AEEU) obtained from an iterative, participatory approach with members and comparing including views from other parts of the world. The seven controversial topics as follows: i) use of agroecology versus peasant farming versus larger farms; iii) technological innovations in agriculture and precision farming; iv) engineering in agriculture; v) local and short food circuits; vi) social justice; vii) gender perspective. The article presents diverse points of view related to geographical area and sociopolitical contexts. However, there are several common points to redesign farming and food systems, as a lever acting on several topics, and in considering agroecology as a multiactor approach for the needed transition.

Keywords

Agroecological practices, agroecological principles, participatory multiactor approach, transition to sustainable
