Submitted on 1 Mar 2021

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

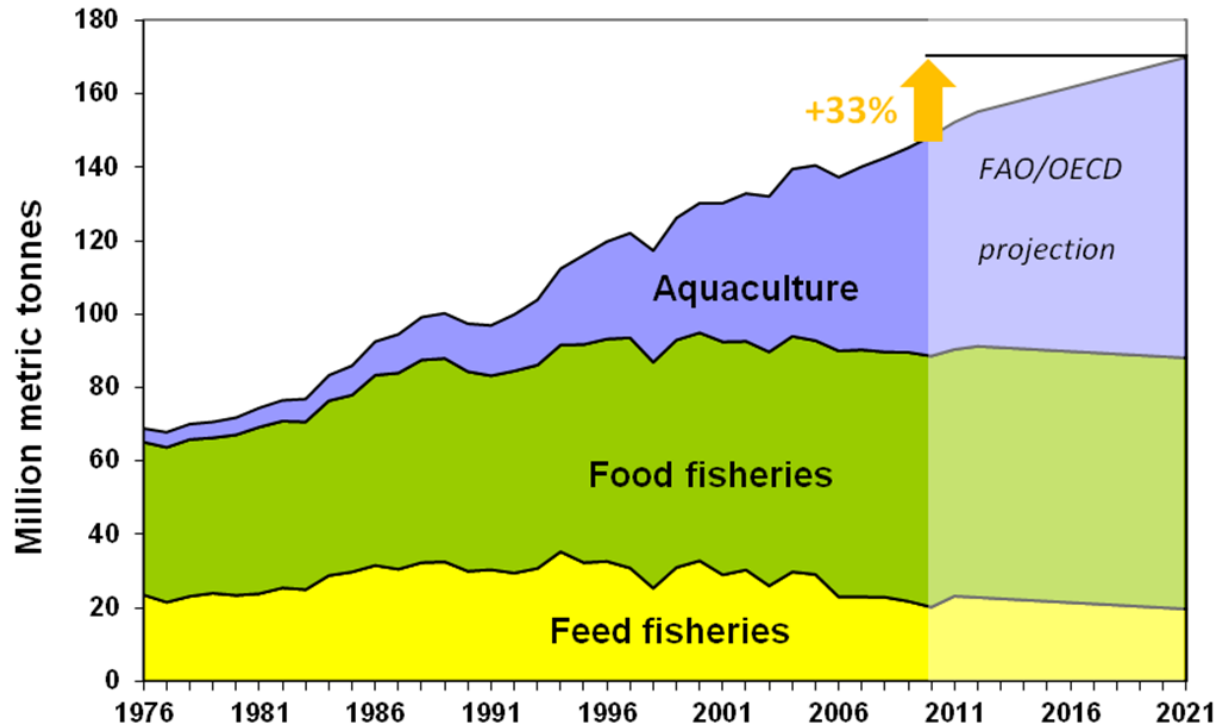

**AQUAEXCEL and AQUAEXCEL²⁰²⁰:
RESEARCH INFRASTRUCTURE PROJECTS FOR THE
BENEFIT OF EUROPEAN AQUACULTURE**

Marc VANDEPUTTE
AQUAEXCEL²⁰²⁰ coordinator
INRA, France

Paris, CRB Anim international seminar, 12 May 2017

Aquaculture: a growing challenge

EU level: production is now stagnating and 85% of seafood is imported

→ EU strategy to develop aquaculture production

→ Research to improve competitiveness and sustainability

AQUAEXCEL²⁰²⁰ – At a glance

Aquaculture Infrastructures for Excellence in European Fish Research (towards 2020)

AQUAEXCEL	AQUAEXCEL ²⁰²⁰
2011-2015 (4 years)	2015-2020 (5 years)
17 partners, 27 facilities	22 partners, 39 facilities
9.2 M€ grant	9.7 M€ grant

Main goal: to integrate and open the key aquaculture research infrastructures in Europe, covering all EU fish culture systems and competences

Types of activities

Transnational Access (TNA): Give 'free of charge' access to the world-class infrastructures and resources of the consortium

Networking Activities (NA): Co-ordinate partners infrastructures (resource and know-how sharing, communication) and give visibility

Joint Research Activities (JRA): Joint R&D to improve the services provided by the infrastructures

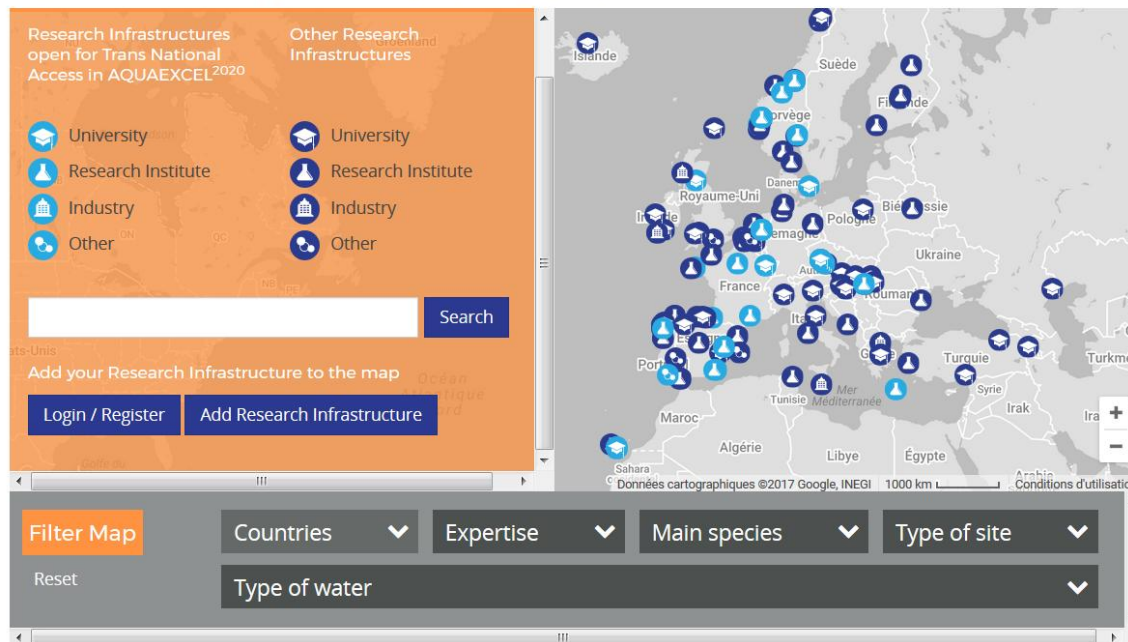

AQUAEXCEL Networking activities

AquaExcel Archive

Interactive Map

For questions related to the map please contact AquaTT (claudia@aquatt.ie).

The screenshot shows the 'Interactive Map' interface. On the left, there is a search bar and a list of categories: University, Research Institute, Industry, and Other. Below this is a 'Search' button and a section for 'Add your Research Infrastructure to the map' with 'Login / Register' and 'Add Research Infrastructure' buttons. The main area is a map of Europe with numerous blue location markers. At the bottom, there is a 'Filter Map' section with dropdown menus for 'Countries', 'Expertise', 'Main species', 'Type of site', and 'Type of water', along with a 'Reset' button.

AQUAEXCEL Networking activities

ATOL / EOL ontologies

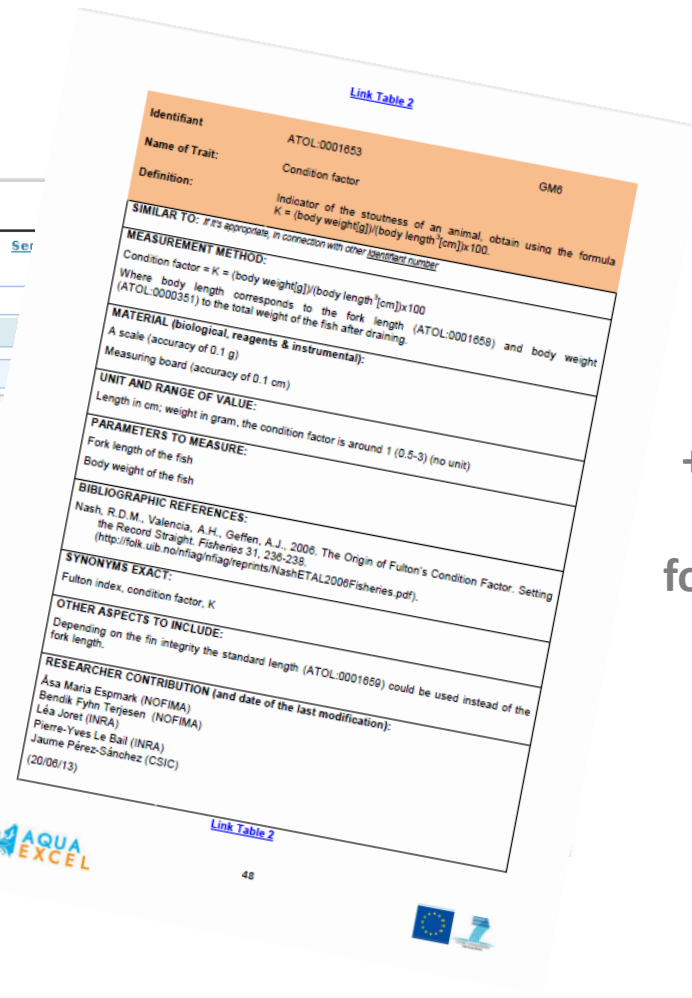

AQUAEXCEL
Aquaculture Infrastructures for Excellence in European Fish Research
Project number: 262336
Combination of CP & CSA
Seventh Framework Programme
Capacities

Deliverable 3.2
Best practices & cross-applicability of methods to measure phenotypes

Duration: 48 months

Due date of deliverable: M24
Actual submission date: M28
Start date of the project: March 1st, 2011
Organisation name of lead contractor: ULPGC
Revision: Bendik Fyhn Terjesen

Project co-funded by the European Commission within the Seventh Framework Programme (2007-2013)
Dissemination Level
PU Public
PP Restricted to other programme participants (including the Commission Services)
RE Restricted to a group specified by the consortium (including the Commission Services)
CO Confidential, only for members of the consortium (including the Commission Services)

[Link Table 2](#)

Identifiant	ATOL.0001653
Name of Trait:	Condition factor
Definition:	Indicator of the stoutness of an animal, obtain using the formula $K = (\text{body weight}[\text{g}] / \text{body length}^3[\text{cm}]) \times 100$
SIMILAR TO:	<i>if it's appropriate, in connection with other identifier number</i>
MEASUREMENT METHOD:	Condition factor = $K = (\text{body weight}[\text{g}] / \text{body length}^3[\text{cm}]) \times 100$ Where body length corresponds to the fork length (ATOL:0001658) and body weight (ATOL:0000351) to the total weight of the fish after draining.
MATERIAL (biological, reagents & instrumental):	A scale (accuracy of 0.1 g) Measuring board (accuracy of 0.1 cm)
UNIT AND RANGE OF VALUE:	Length in cm; weight in gram, the condition factor is around 1 (0.5-3) (no unit)
PARAMETERS TO MEASURE:	Fork length of the fish Body weight of the fish
BIBLIOGRAPHIC REFERENCES:	Nash, R.D.M., Valencia, A.H., Geffen, A.J., 2006. The Origin of Fulton's Condition Factor. Setting the Record Straight. <i>Fisheries</i> 31, 236-238. (http://folk.uib.no/nifmag/riag/reprints/NashETAL2006Fisheries.pdf).
SYNONYMS EXACT:	Fulton index, condition factor, K
OTHER ASPECTS TO INCLUDE:	Depending on the fin integrity the standard length (ATOL:0001650) could be used instead of the fork length.
RESEARCHER CONTRIBUTION (and date of the last modification):	Ása Maria Espmark (NOFIMA) Bendik Fyhn Terjesen (NOFIMA) Léa Jorset (INRA) Pierre-Yves Le Bail (INRA) Jaume Pérez-Sánchez (CSIC) (20/06/13)

AQUAEXCEL Joint research

Effect of experimental unit size on results

AQUAEXCEL Joint research

Early individual tagging of sea bass and sea bream

Insertion of the NonaTec tag in the abdominal cavity of a 400 mg juvenile seabass

Sampling of the caudal fin for DNA collection

Sampling mucus on Whatmann paper and storage at -20°C

- Survival OK for BW > 400 mg
- No effect on growth
- Effect on swimming behaviour (disappears after 42 days)
- Reading success > 80%
- Survival OK
- DNA collected starting 71 dpf (43 mg)
- DNA quality/quantity OK for routine genotyping for fish > 87 dpf (248 mg)

Early individual electronic identification of sea bass using RFID microtags: A first example of early phenotyping of sex-related growth

AQUAEXCEL Joint research

Isogenic fish lines: the lab mouse of fish research

Already there:

Project structure

Four workpackages focus on strengthening joint research activities, whilst four more involve TNA, industry links, developing common standards and tools and providing training and dissemination

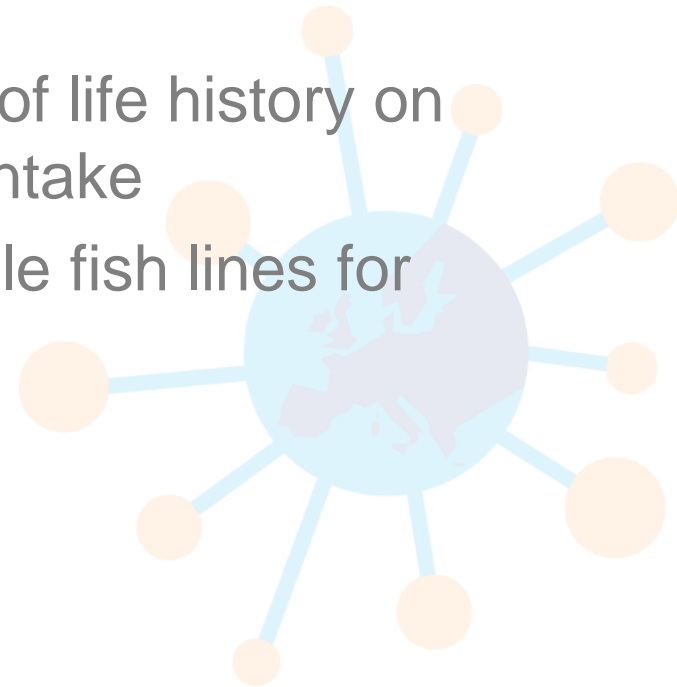

Networking activities

- Management of the TNA calls
- Fostering innovation through analysis and promotion of results by and Industry-Research Advisory Panel
- The Digital Fish: organize and share fish lines data
- An open access bioinformatics tool (Fish and Chips)
- Common procedures for cryobanking
- Data collection and interoperability
- “one stop shop” Web portal www.aquaexcel2020.eu
- Face-to-face and distance learning courses

Joint research for better experiments

- Virtual modelling of aquaculture experimental facilities to help design/interpret experiments
- Experimental fish management: effect of life history on results, how to achieve maximal feed intake
- Development and maintenance of stable fish lines for experimental purposes
- Internal nano-sensors to monitor fish physiology/behavior in real time

Transnational Access

The numbers

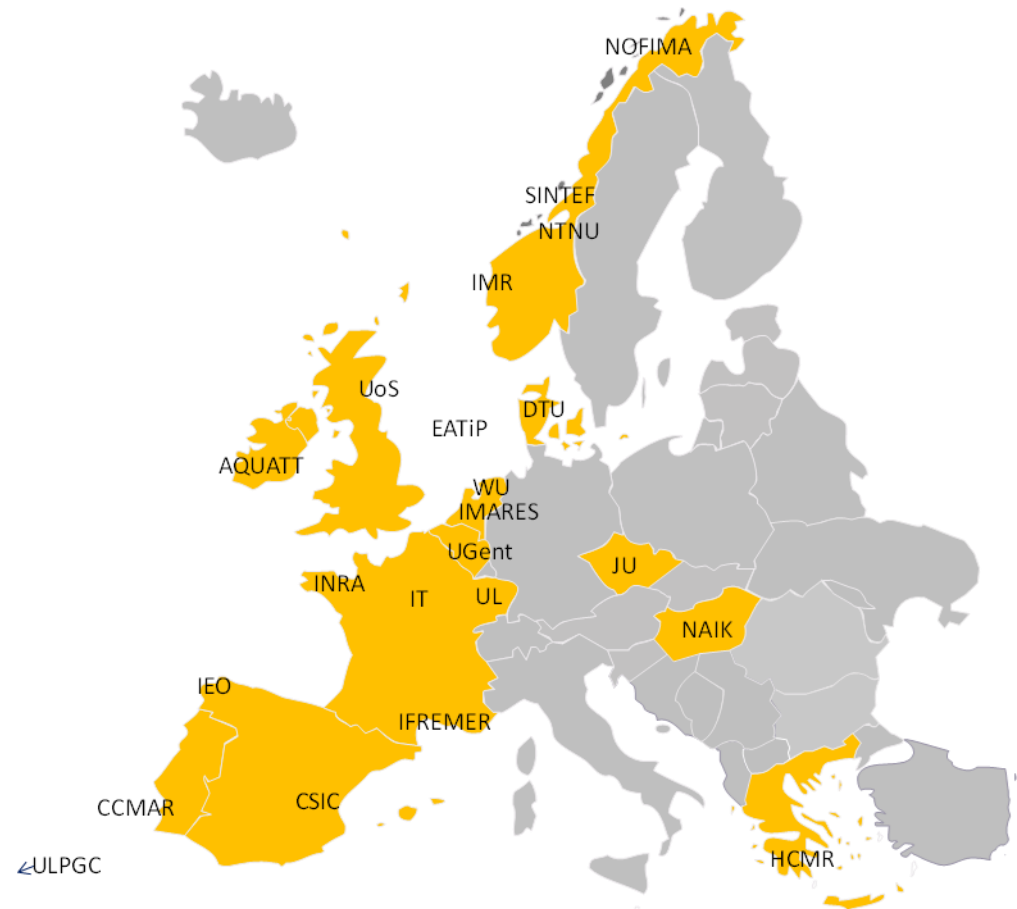

21 Host Organisations

39 Research Installations

~170 Funded Projects

~217 Users

~300 Applications

ARE YOU INVOLVED IN AQUACULTURE RESEARCH?

AQUA EXCEL 2020

FIRST CALL

Apply for Fully EC-Funded Access to Top-Class Research Infrastructures with AQUAEXCEL 2020

AQUAEXCEL 2020 offers access to top-class research infrastructures for both basic and applied research, giving aquaculture research groups the opportunity to utilise AQUAEXCEL 2020's installations.

The AQUAEXCEL 2020 project regularly invites proposals from European research groups for scientific research that utilises the installations of any of the participating Aquaculture Research Infrastructures.

These installations are made available to the research community for Terms and Conditions with the support of the European Union's Horizon 2020 Research and Innovation Programme.

Interested researchers can propose aquaculture research projects that:

- Involve research on any of the available fish species at the selected aquaculture research infrastructure
- Are compliant with the CATH Strategic Research & Innovation Agenda
- Involve visits of one or two people to a research infrastructure that provides data others not available in their own country for periods of up to three months.

Access to the research infrastructures and associated travel and subsistence expenses will be paid for under the project.

THE FIRST CALL FOR ACCESS IS NOW OPEN - DEADLINE FOR APPLICATIONS 29 JANUARY 2016
For more information: www.aquaexcel.eu

AVAILABLE RESEARCH INFRASTRUCTURES COVER

- WATER ENVIRONMENT**
Ecological Health and simple and 2D Water Quality Assessment
- FISH SPECIES**
Salmon, Trout, Sea Bream, Sea Bass, Gilthead Sea loach, Carp, Catfish
- FIELDS OF EXPERTISE**
Nutrition, Pathology, Health, Welfare, Genetic, Reproduction, Health and Environment, Technology
- AQUACULTURE SYSTEMS**
Recirculation, Flow-through, Cage, Harbours and Pond Systems
- MULTIPLE SCALES**
Small, Medium and Large Scale Experiments

AQUAEXCEL
WWW.AQUAEXCEL.EU

The AQUAEXCEL 2020 project is funded by the European Union's Horizon 2020 Research and Innovation Programme under grant agreement No. 652831. The project information is available on the project's website: www.aquaexcel.eu

The TNA offer

Access to the partner research installations for

- Researchers from public & private organisations
- Maximum 2 people for up to 3 months (remote access also possible)
- Use of facilities not available in own country
- Free (travel and subsistence expenses paid)

Transnational access: all major EU fish species + new species

AQUAEXCEL partners
New in AQUAEXCEL²⁰²⁰

All types of infrastructures

**New in AQUAEXCEL²⁰²⁰:
Disease challenge testing**

What is the vision for 2020 ?

In 2020, we will...

- have 180 TNA projects completed, many by SMEs and young scientists (trained in our AE²⁰²⁰ courses)
- be able to track the background info of all our results
- See AQUAEXCEL²⁰²⁰ results in all EU aquaculture conferences
- provide a documented catalogue of isogenic experimental lines of salmon, trout, sea bass and carp
- obtain better, industry meaningful results with less fish
- Follow experiments in real time with implanted fish and benchmark them with a priori simulation models

...prepare AQUAEXCEL²⁰²⁵ ?

What are the benefits ?

For project partners

- Building a community of leading research organizations
- Sharing of experiences/ methods and tools
- Developing new experimental approaches
- Developing new collaborations through TNA
- But NOT subsidizing routine operation of the infrastructures
- Preparing an ERIC ? Need for national support !

Challenges for an infra project

What do you need to build an infrastructures project ?

- Have a shared vision among top-level EU partners
- Identify complementarities / synergies among partners
- Have the right words in the Work Programme:
 - Easy for Networking Activities
 - Think well for Joint Research Activities:
this is NOT problem-solving research
- The greatest challenge: an attractive TNA offer
 - What are your products and services ?
 - Would you use them if available in other institutions ?
 - Does not subsidize unused structures (20% rule) !!

Thank You

Marc Vandeputte
marc.vandeputte@inra.fr
