HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A MEDIUM-THROUGHPUT METHOD TO PHENOTYPE FISH FOR INDIVIDUAL FEED EFFICIENCY

M. Besson, F. Allal, B. Chatain, A. Vergnet, F. Clota, S. Ferrari & M. Vandeputte

Background

Feed conversion ratio (FCR) = ability of fish to convert feed into biomass

$$\text{FCR} = \text{feed intake} / \text{weight gain}$$

Individual feed intake unknown

Easy to measure

→ Genetic parameters of FCR are unknown

Our innovation

Phenotyping fish in individual aquariums

Fish kept in aquariums 6 weeks

200 aquariums

→ Weight gain
Weight measured every 2 weeks

→ Feed intake
Automatic delivery of restricted ration
Uneaten pellets counted daily

Extra results

Individual phenotype

+

Individual genotype
(3000 SNPs)

=

$h^2 = 0.26$

Individual FCR can be improved through selective breeding
