HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Socio-economic context

An innovative powder

Objective

Production cheese
on demand

Materials and methods

new
consumption
patterns

Results and discussion

eco-efficiency

Perspectives

INRAe

A new cheesemaking technology, using dairy powder, to reduce the environmental impact of international trade in cheese

Marielle Harel-Oger, Gilles Garric
UMR STLO, INRAE, Institut Agro, FRANCE

- Cheese production and consumption are expected to grow by 1%/year worldwide in the next 10 years, especially in developing countries (OCDE and FAO 2020-2029)
- Cheese consumption appears to be stagnating in Europe (CNIEL, 2021)
- The mismatch between production and consumption areas should increase global trade in cheese, which would advantageously be achieved in powder form, easy to reassemble and with multiple flavours and textures adapted to new consumption patterns

Develop new cheese products and new technologies adapted to the expectations of consumers in emerging countries

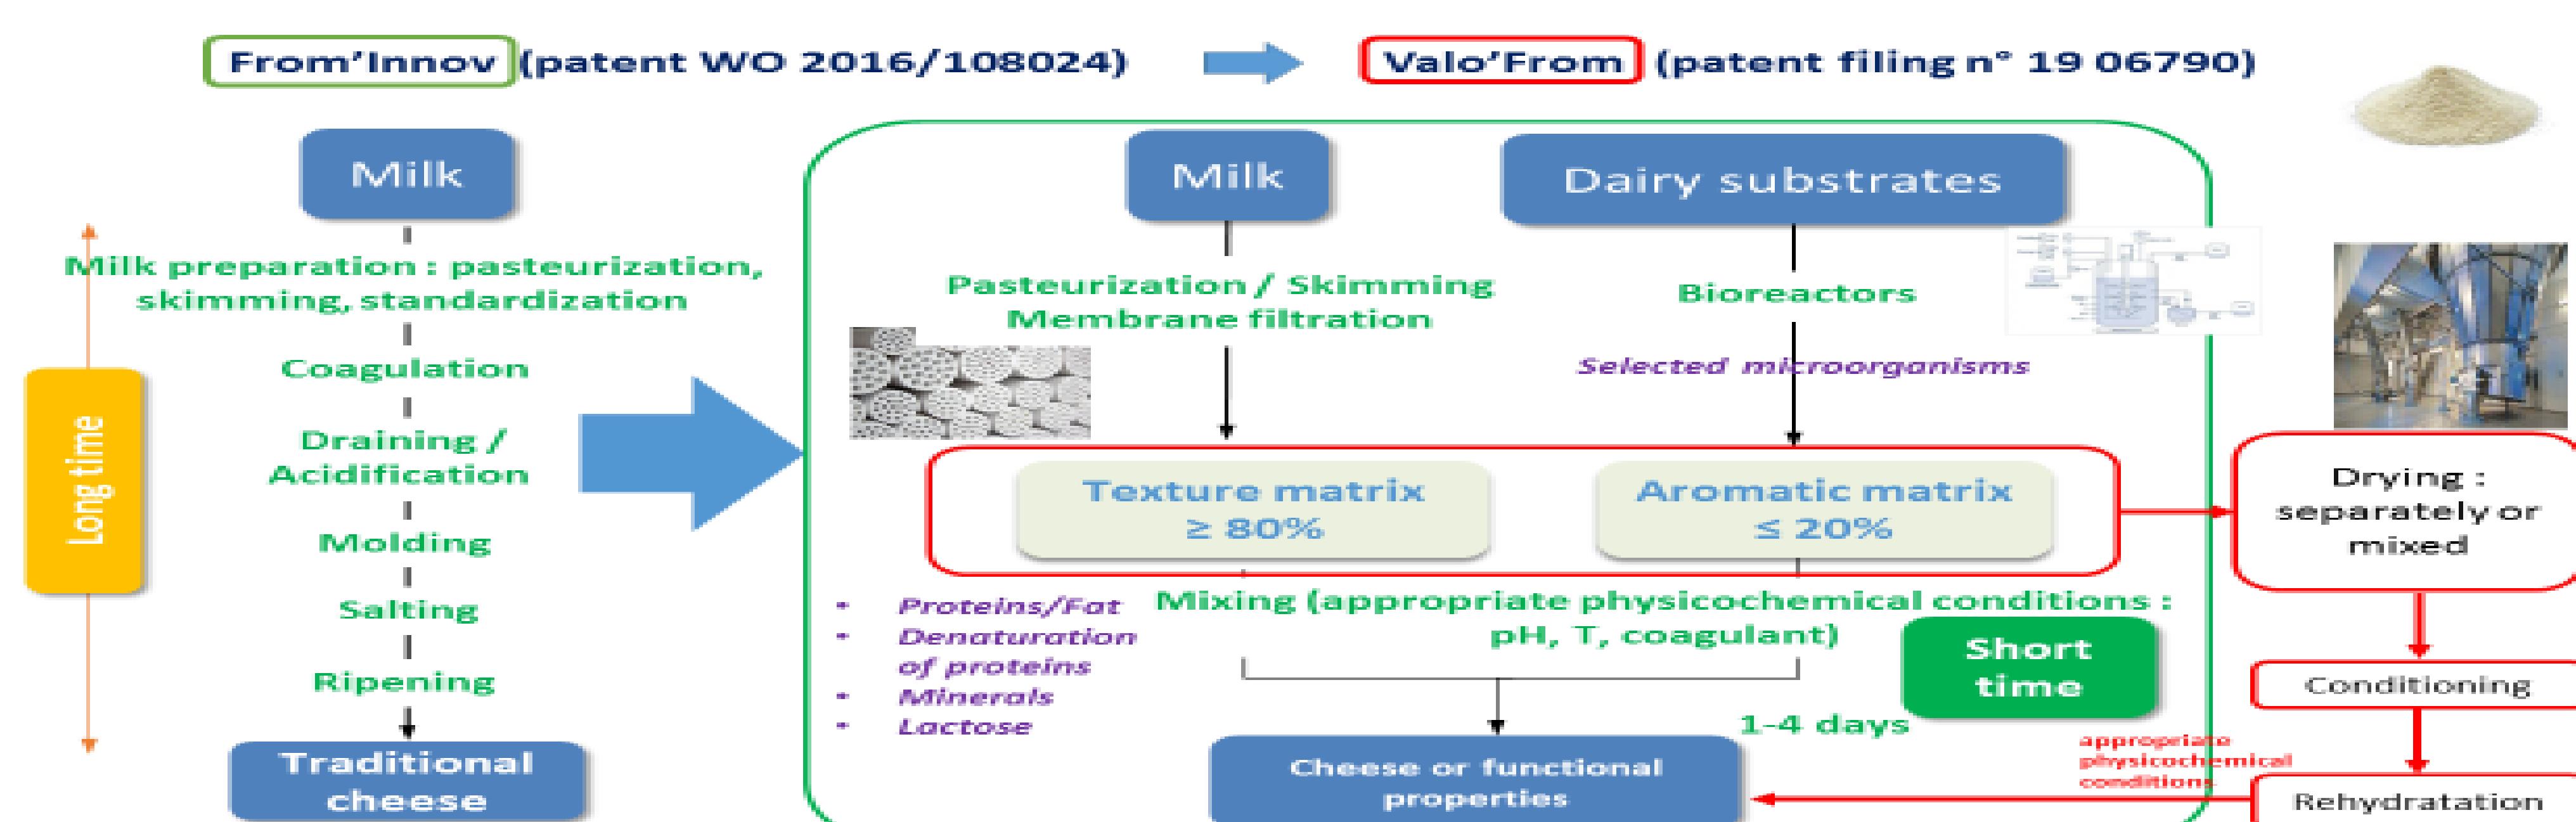

Fig. 1: Valo'from: a process adapted to new consumption models for developing countries

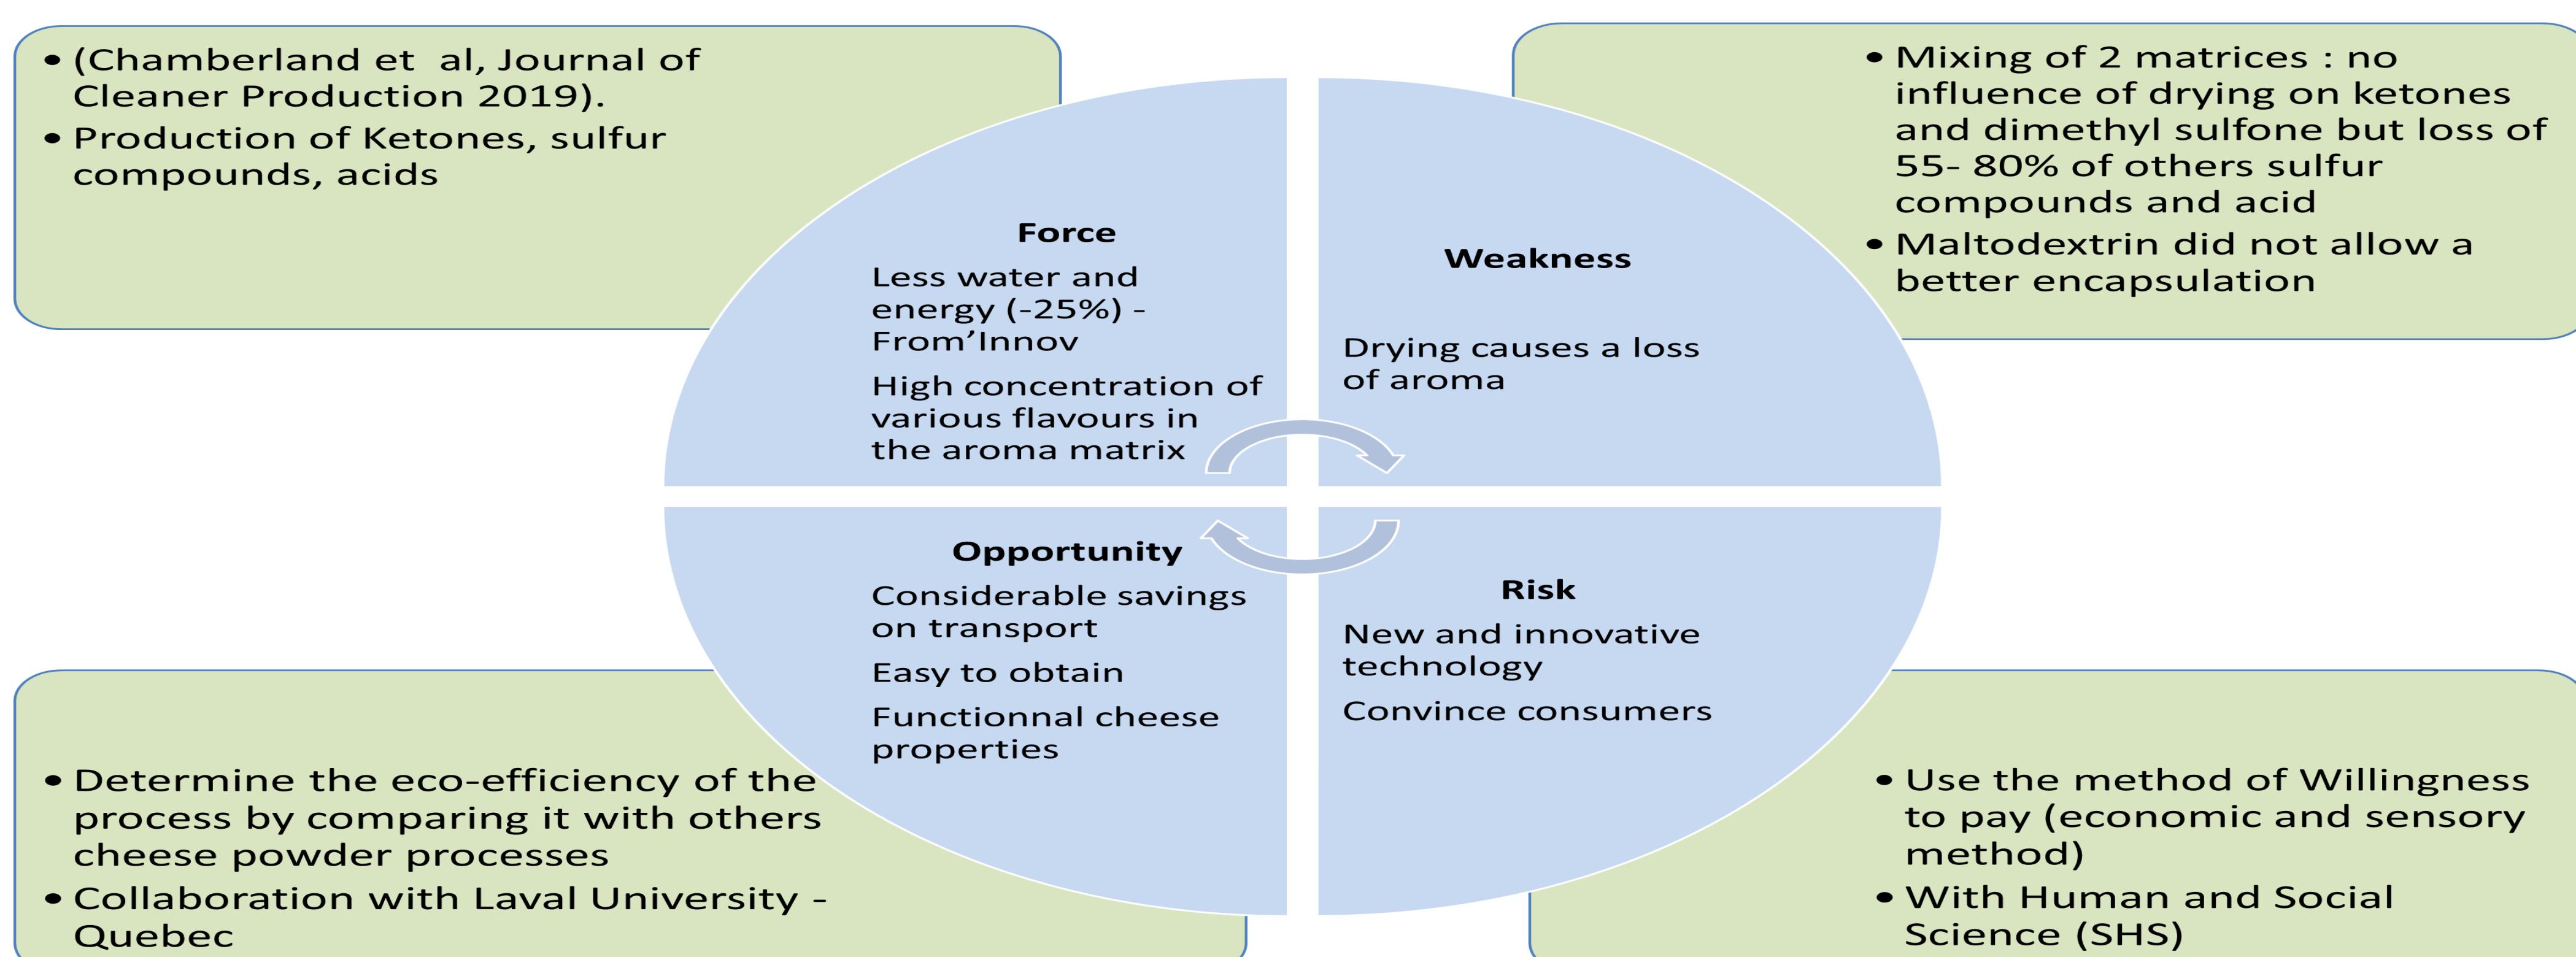

Fig. 2: SWOT of the process of Valo'from

- Quantify the eco-efficiency of the process from the raw material to the market
- Improve the encapsulation of aroma compounds
