Submitted on 28 Oct 2021

**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# INTERSECTIONAL APPROACH OF EVERYDAY GEOGRAPHY

Julie Vallée & Maxime Lenormand

Géographie-cités, CNRS, Paris, France

TETIS, INRAE, Montpellier, France

# MOTIVATIONS

Only few studies about everyday segregation... and they usually explore single axe of difference (ie. social class) with a single-city focus

**Measuring segregation using patterns of daily travel behavior: A social interaction based model of exposure**

Steven Farber <sup>a,\*</sup>, Morton O'Kelly <sup>b</sup>, Harvey J. Miller <sup>b</sup>, Tijs Neutens <sup>c</sup>

**Social segregation around the clock in the Paris region (France)**

Guillaume Le Roux <sup>\*</sup>, Julie Vallée, Hadrien Commenges

**Beyond residential segregation: A spatiotemporal approach to examining multi-contextual segregation**

Yoo Min Park <sup>\*</sup>, Mei-Po Kwan

**The temporal variation of ethnic segregation in a city: Evidence from a mobile phone use dataset**

Siiri Silm <sup>a,\*</sup>, Rein Ahas <sup>a,b</sup>

**From residence to movement:  
The nature of racial segregation  
in everyday urban mobility**

**Jennifer Candipan** 

Brown University and Harvard University, USA

**Nolan Edward Phillips**

Harvard University, USA

**Robert J Sampson**

Harvard University, USA

**Mario Small** 

Harvard University, USA

Here we explore how local population concentration change throughout the day

- ✓ crossing three axes of differences (gender, age and education) from an intersectional lens
- ✓ in 49 French city regions to make comparisons across and within city regions possible

# DATA

- From public transportation surveys in 49 French city regions
  - 385,000 respondents
  - 1.7 millions of trips
- Trips dataset to hourly location dataset
  - displayed in **MOBILISCOPE** platform
- Present population
  - space (district scale – 2572 French districts)
  - hour (24 hours – a weekday)
  - social group
    - ✓ gender (women; men)
    - ✓ age (4 age groups)
    - ✓ education (4 educational groups)

# DATA

# MISMATCH IN HOURLY PROFILES - Methods

## DOMINANTS *versus* SUBORDINATES

Mismatch between the three '**dominants**' groups:  
*men, middle-age and high educational people*

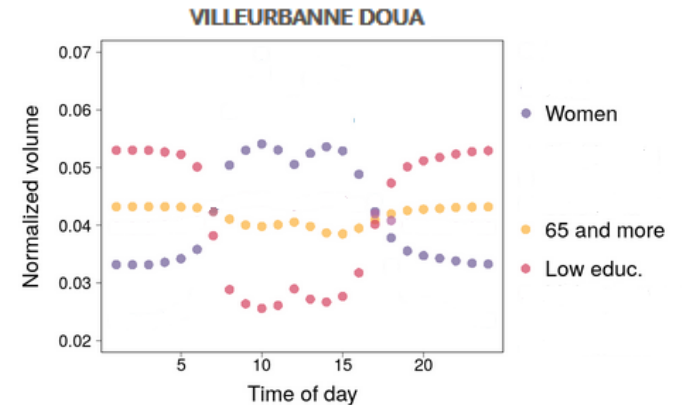

# MISMATCH IN HOURLY PROFILES - Methods

## DOMINANTS *versus* SUBORDINATES

Mismatch between the three '**dominants**' groups:  
*men, middle-age and high educational people*

Mismatch between three '**subordinates**' groups:  
*women, elderly and low educated people*

# MISMATCH IN HOURLY PROFILES - Results

## DOMINANTS *versus* SUBORDINATES

Number of districts	Dominants	Subordinates
	<i>men, middle-age and high educational people</i>	<i>women, elderly and low educated people</i>
Average mismatch ( <i>and standard deviation</i> ) in hourly profiles		

Per profiles (for the All population)

'daytime' attractive	Profile 1	67	0.068 (0.112)	<	<b>0.273</b> (0.134)
	Profile 2	261	0.163 (0.117)	≈	0.168 (0.1)
stable	Profile 3	585	<b>0.125</b> (0.109)	>	0.09 (0.09)
	Profile 4	567	<b>0.125</b> (0.104)	>	0.084 (0.077)
'nighttime' attractive	Profile 5	901	0.11 (0.087)	≈	0.125 (0.077)
	Profile 6	180	0.052 (0.074)	<	<b>0.209</b> (0.102)

# TO RESUME

- It is especially in areas with strong increase or decrease of population during the day that hourly profiles
  - combine the largest dissimilarities within gender, age and educational subgroups
  - are widely more synchronous between 'dominants' subgroups than between 'subordinates' subgroups
- Empirical keys
  - to broaden the scope of segregation traditionally centered on residential areas
  - to improve knowledge of space-time (de)synchronization across gender, age and educational groups
- A step forward to distinguish
  - places where 'dominants' groups are well-placed to join forces and perpetuate differential access to privileges,
  - or conversely places where 'subordinates' groups face larger obstacles to make common causes and to get a convergence in their empowerment

# OPEN SCIENCE

- All data, code and materials are available
  - Initial **data** with hourly populations estimations
    - ✓ in the **M****BILISCOPE** platform - <https://mobiliscope.cnrs.fr/en>
    - ✓ also in a Zenodo repository - <https://doi.org/10.5281/zenodo.4900655>
  - **Procedures** in a public repo - <https://gitlab.huma-num.fr/daycourse/intersectionality>
  - **Findings** can be fully explored in a open dedicated cartographic platform <http://shiny.umr-tetis.fr/Intersectionality>
- Pre-print paper - <https://arxiv.org/abs/2106.15492>
