

Figure S1. Effects of chronic i.c.v. administration of 26RFa on various metabolic parameters of the obese/diabetic mice. Measurement of meal size (**A**), meal frequency (**B**), meal duration (**C**), total meal size (**D**), and horizontal (**E**) and vertical (**F**) locomotor activity in high fat mice during the chronic treatment with 26RFa (red) or the vehicle (black) (n=8/group). Values represent the mean \pm SEM.
