HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers. L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Maritime pine genomics in focus

This document is available upon request at: laurent.bouffier@inrae.fr

Abstract

The advent of the next-generation genome sequencing technologies has allowed approaching the sequencing and analysis of large and complex conifer genomes. Maritime pine (*Pinus pinaster* Ait.) is an important economically and ecologically conifer species widely distributed in South-West Europe, which shows a significant genetic and adaptive variability. This chapter takes on the task of reviewing the insights into the maritime pine genome sequencing breakthrough and its impact on downstream analysis. Maritime pine genome sequencing and assembly approaches are described along with the impact of related tools. A section of the state-of-the-art research on comparative, functional, structural and translational genomics aimed at dissecting the genetic basis and the specific regulation of biological processes underlying the expression of traits of interest in maritime pine and other conifers is also described. Perspectives about the impact of these tools as well as additional research approaches are discussed.

Contents

5.1 Introduction

5.2 New tools

- 5.2.1.1 Template Selection and Preparation
- 5.2.1.2 Next Generation Sequencing Platforms
- 5.2.1.3 Characterization of BAC Clones and Genome Sequencing Effort
- 5.2.1.4 Genome Assembly and Annotation
- 5.2.2. Transcriptome Atlas of Pinus pinaster
- 5.2.3. Vegetative Propagation
- 5.2.4 Transgenesis
- 5.2.5 Molecular Breeding

5.3 Enabling new Discoveries

- 5.3.1 Genome Structure through the Lens of Comparative Genomics
- 5.3.1.1 Insights from Comparative Mapping between Conifers
- 5.3.1.2 Functional Comparative Genomics
- 5.3.2 Gene Expression Regulation: Analysis of small RNA and TF.
- 5.3.2.1 Gene Expression Regulation: Analysis of small RNA
- 5.3.2.2 Gene Expression Regulation: Analysis of Transcription Factors
- 5.3.3 Gene Related to Functions
- 5.3.3.1 Developmental Plasticity and Adult Cell Reprogramming: The Case of Adventitious Regeneration
- 5.3.3.2 Abiotic Stress Response: The Case of Drought Response
- 5.3.3.3 Biotic Stress Response: Coping with Pests (PWN), Pathogens (PPC) and Herbivores
- 5.3.4 Genetic Architecture
- 5.3.4.1 Linkage Mapping Using Pedigreed Populations
- 5.3.4.2 Association Mapping Studies
- 5.3.4.3 Polygenic Association Methods
- 5.3.5 Genetic variation as a fuel for adaptation
- 5.3.5.1 Response to Selection
- 5.3.5.2 Association between Traits and Fitness
- 5.3.5.3 Phenotypic Plasticity and Adaptation
- 5.4 Perspectives
