HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

PCI

Open Science

- **2016 INRA : #OpenScience-4 - De nouveaux modes de diffusion de la connaissance**
 - Adapter le modèle éditorial et économique des revues académiques dont l'Inra est propriétaire aux principes d'une science ouverte
 - Explorer et encourager des modèles alternatifs de publication
 - Envisager la sortie du système des abonnements aux revues à l'horizon 2020
- **Aujourd'hui : soutien de la DiPSO**

Scientific Publication

- **too long**
- **not transparent**
- **too expensive**
 - €10 Billion / 3 millions articles = €3000 / article
 - extraordinary profit margin (30-40% for the 5 big publishers)
- **vicious**
 - turnover positively linked to the number of accepted articles

Preprints: the solution?

Preprints are good...

- Low cost
- Free for authors and readers
- Available immediately
- Archive
- Proof of anteriority
- Searchable/Findable

But putative quality problem...

- No formal evaluation – no peer-review
- Everything can be found in open archives including preprints of very bad quality

Preprints are good...

PCI

The background of the slide features a complex network diagram. It consists of numerous nodes of varying sizes, represented by light blue and white circles, interconnected by thin, light blue lines. The nodes are distributed across the entire frame, with a higher density in the center, creating a sense of a large, interconnected system or data network.

ABSTRACT

It is a real challenge for life cycle assessment practitioners to identify all relevant substances contributing to the ecotoxicity. Once this identification has been made, the lack of corresponding ecotoxicity factors can make the results partial and difficult to interpret. So, it is a real and important challenge to provide ecotoxicity factors for a wide range of compounds. Nevertheless, obtaining such factors using experiments is

Relaxation of purifying selection suggests low effective population size in eusocial Hymenoptera and solitary pollinating bees

Weyna, Arthur ; Romiguier, Jonathan

10.24072/pcjournal.3 - Peer Community Journal, Volume 1 (2021), article no. e2.

With one of the highest number of parasite, eusocial and pollinator species among all insect orders, Hymenoptera features a great diversity of specific lifestyles. At the population genetic level, such life-history strategies are expected to decrease effective population size and efficiency of purifying selection. In this study, we tested this hypothesis by estimating the relative rate of non-synonymous substitution in 169 species to investigate the variation in natural selection efficiency throughout the hymenopterian tree of life. We found no effect of parasitism or body size, but show that relaxed selection is associated with eusociality, suggesting that the division of reproductive labour decreases effective population size in ants, bees and wasps. Unexpectedly, the effect of eusociality is marginal compared to a striking and widespread relaxation of selection in both social and non social bees, which indicates that these keystone pollinator species generally feature low effective population sizes. This widespread pattern suggests specific constraints in pollinating bees potentially linked to limited resource and high parental investment. The particularly high load of deleterious mutations we report in the genome of these crucial ecosystem engineer species also raises

- **Accepts as is** all articles recommended by a PCI
- **Free for readers** (Open Access)
- **Free for authors** (no APC)
- 80 PCI recommended articles will be published in the weeks following the launch of the journal

- Peer Community Journal <https://peercommunityjournal.org>
- 93 articles were already published on Peer Community Journal
- Peer Community Journal has an ISSN (2804-3871) and is now indexed in DOAJ (<https://www.doaj.org/toc/2804-387>) and in Google scholar. It is currently under evaluation for indexation in Web of Science, CABI; EBSCO, Norwegian register and Sherpa/Romeo. Between 1 and 2 years of anteriority are required by some databases such as Medline/PubMed and Scopus
- Peer Community Journal is indexed in the Journal Checker Tool of CoaS and is planS-compliant
