**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# CONTEXT AND EXPERIMENTAL SITE

- Agroforestry systems → Candidates for agroecological transition
  - DIAMS "Experimental site in Mediterranean Agroforestry under water Stress":
    - Agroforestry system planted in 2017
    - 3 land uses compared : → Agroforestry ( $331 \text{ trees.ha}^{-1}$ )  
→ Crop (no trees)  
→ Forestry ( $1689 \text{ trees.ha}^{-1}$ )
    - Cereal and legume rotations (wheat/barley/pea)
    - Highly instrumented with above and belowground sensors
    - One of the few long term agroforestry experiments

# PHENOLOGICAL MONITORING

**Phenological monitoring of crops**

1 Development records (BBCH scale)  
Aerial biomass  
Root biomass  
Crop yield components

2 Flowering calendar  
Specific richness  
Relative abundance  
Aerial biomass  
Root biomass

3 Black locust development records (BBCH scale)

4 Macroinvertebrate monitoring at the soil surface (Barber traps)

The timeline shows the progression of crop development (pink dots), flowering (blue dots), and black locust development (yellow dots) from January to December. The crop development timeline is labeled with 'Flowering' and 'Maturity' phases. The flowering calendar and black locust development records are aligned with the flowering phase. Macroinvertebrate monitoring is shown as yellow dots at regular intervals throughout the year.

Month	Development records (BBCH scale)	Flowering calendar	Black locust development records (BBCH scale)	Macroinvertebrate monitoring (Barber traps)
