HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Graph theory applied to agroforestry system co-design

Lemière Laëticia^{1,2}, Jaeger Marc², Subsol Gérard³, Gosme Marie¹

Mockup

Traditional way

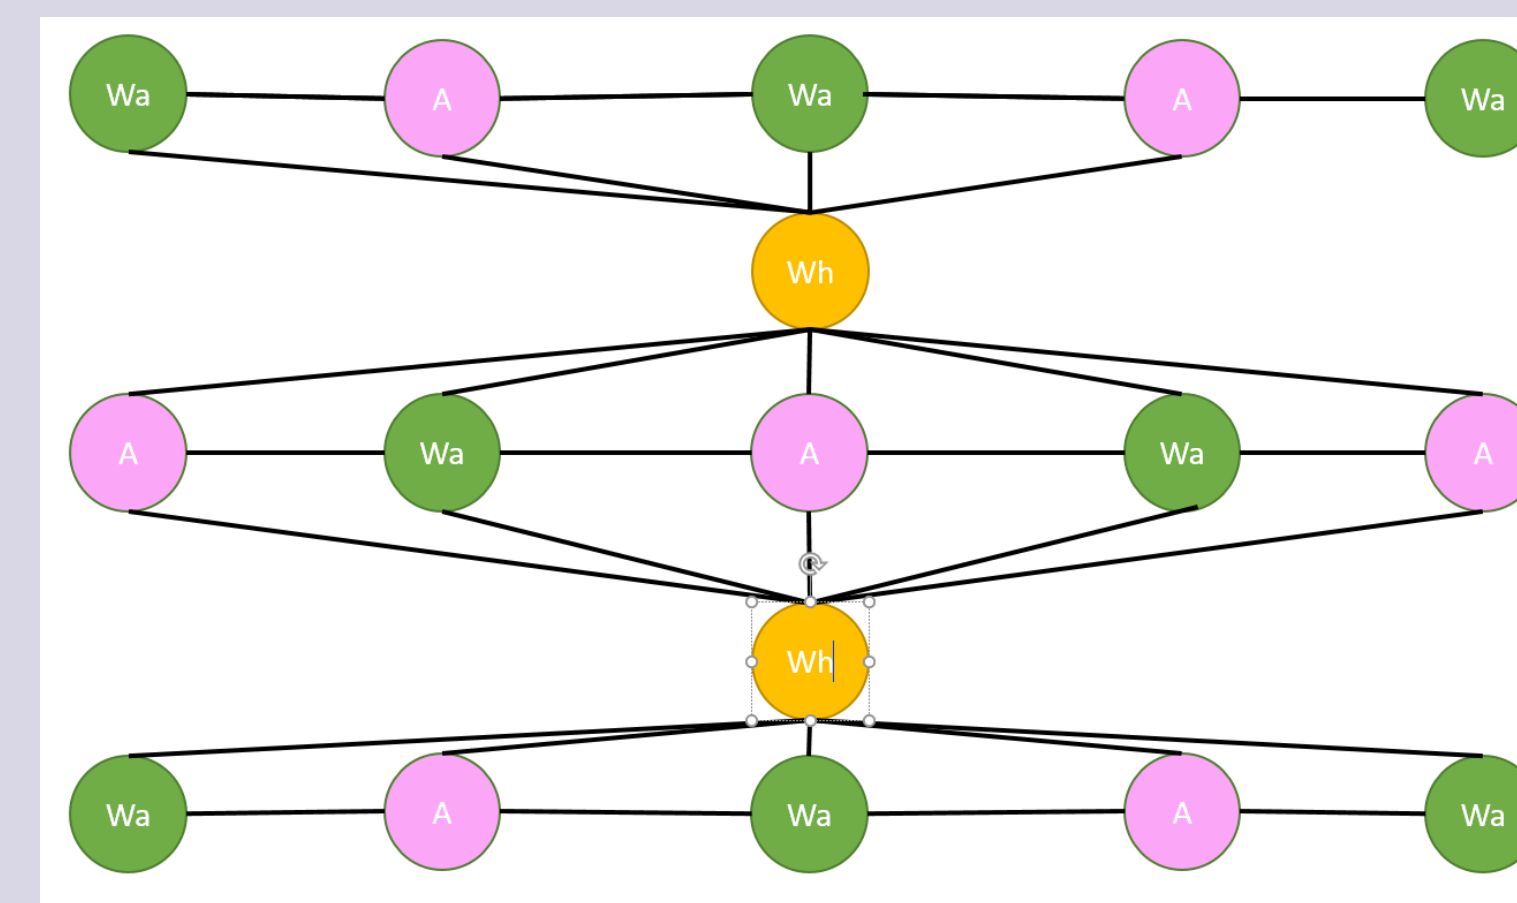

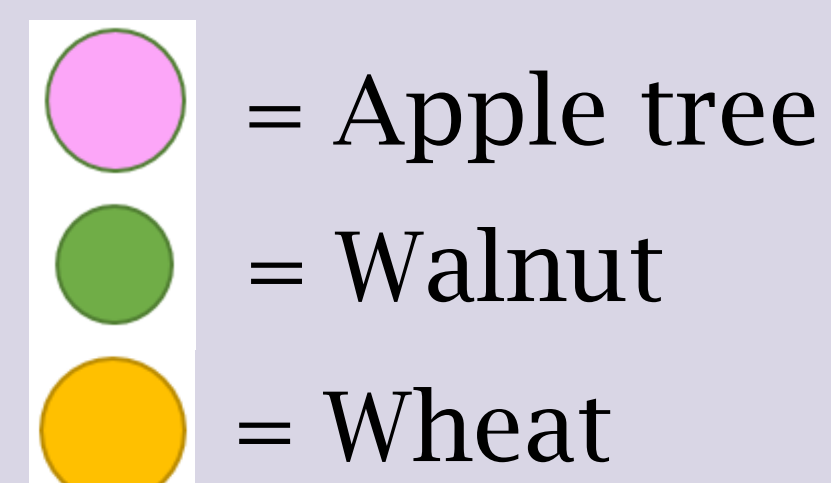

(Space and time) Designs are not easy to share

Our method

Processed **digital twin** of the mockup

Each element is transformed into a node

Digital twin is translated into a **graph**
2 elements are neighbors -> an edge

Search of known patterns
1 pattern = structure supporting ecosystem services

= limiting water stress by tree shadow

Hierarchical graph

Higher level elements are identified

● = vegetal cover

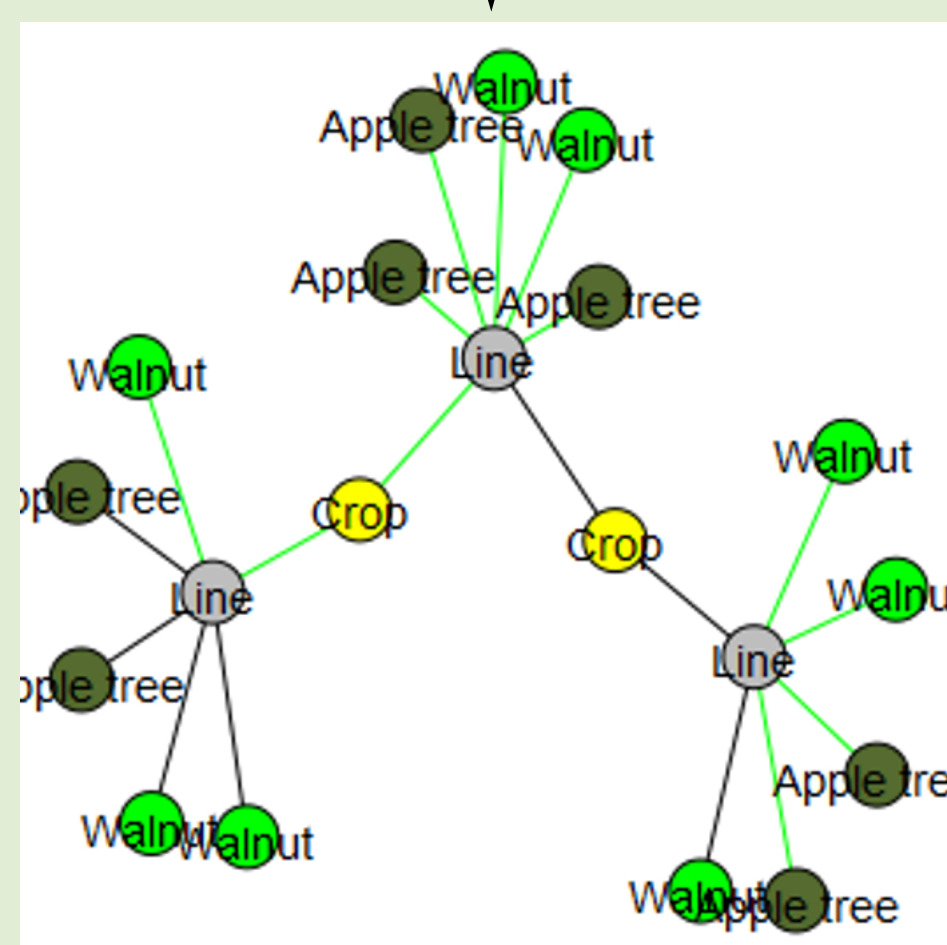

Visualization of the agroforestry system
with ecosystem services

Results and discussion

A novel way to describe agroforestry systems
based on graphs

To **compare** agroforestry systems

To model **temporal evolution** of ecosystem services

Better knowledge of the system

To **share** a more precise
common view
