**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# VizFaDa: Visualisations of FAANG data

## Abstract

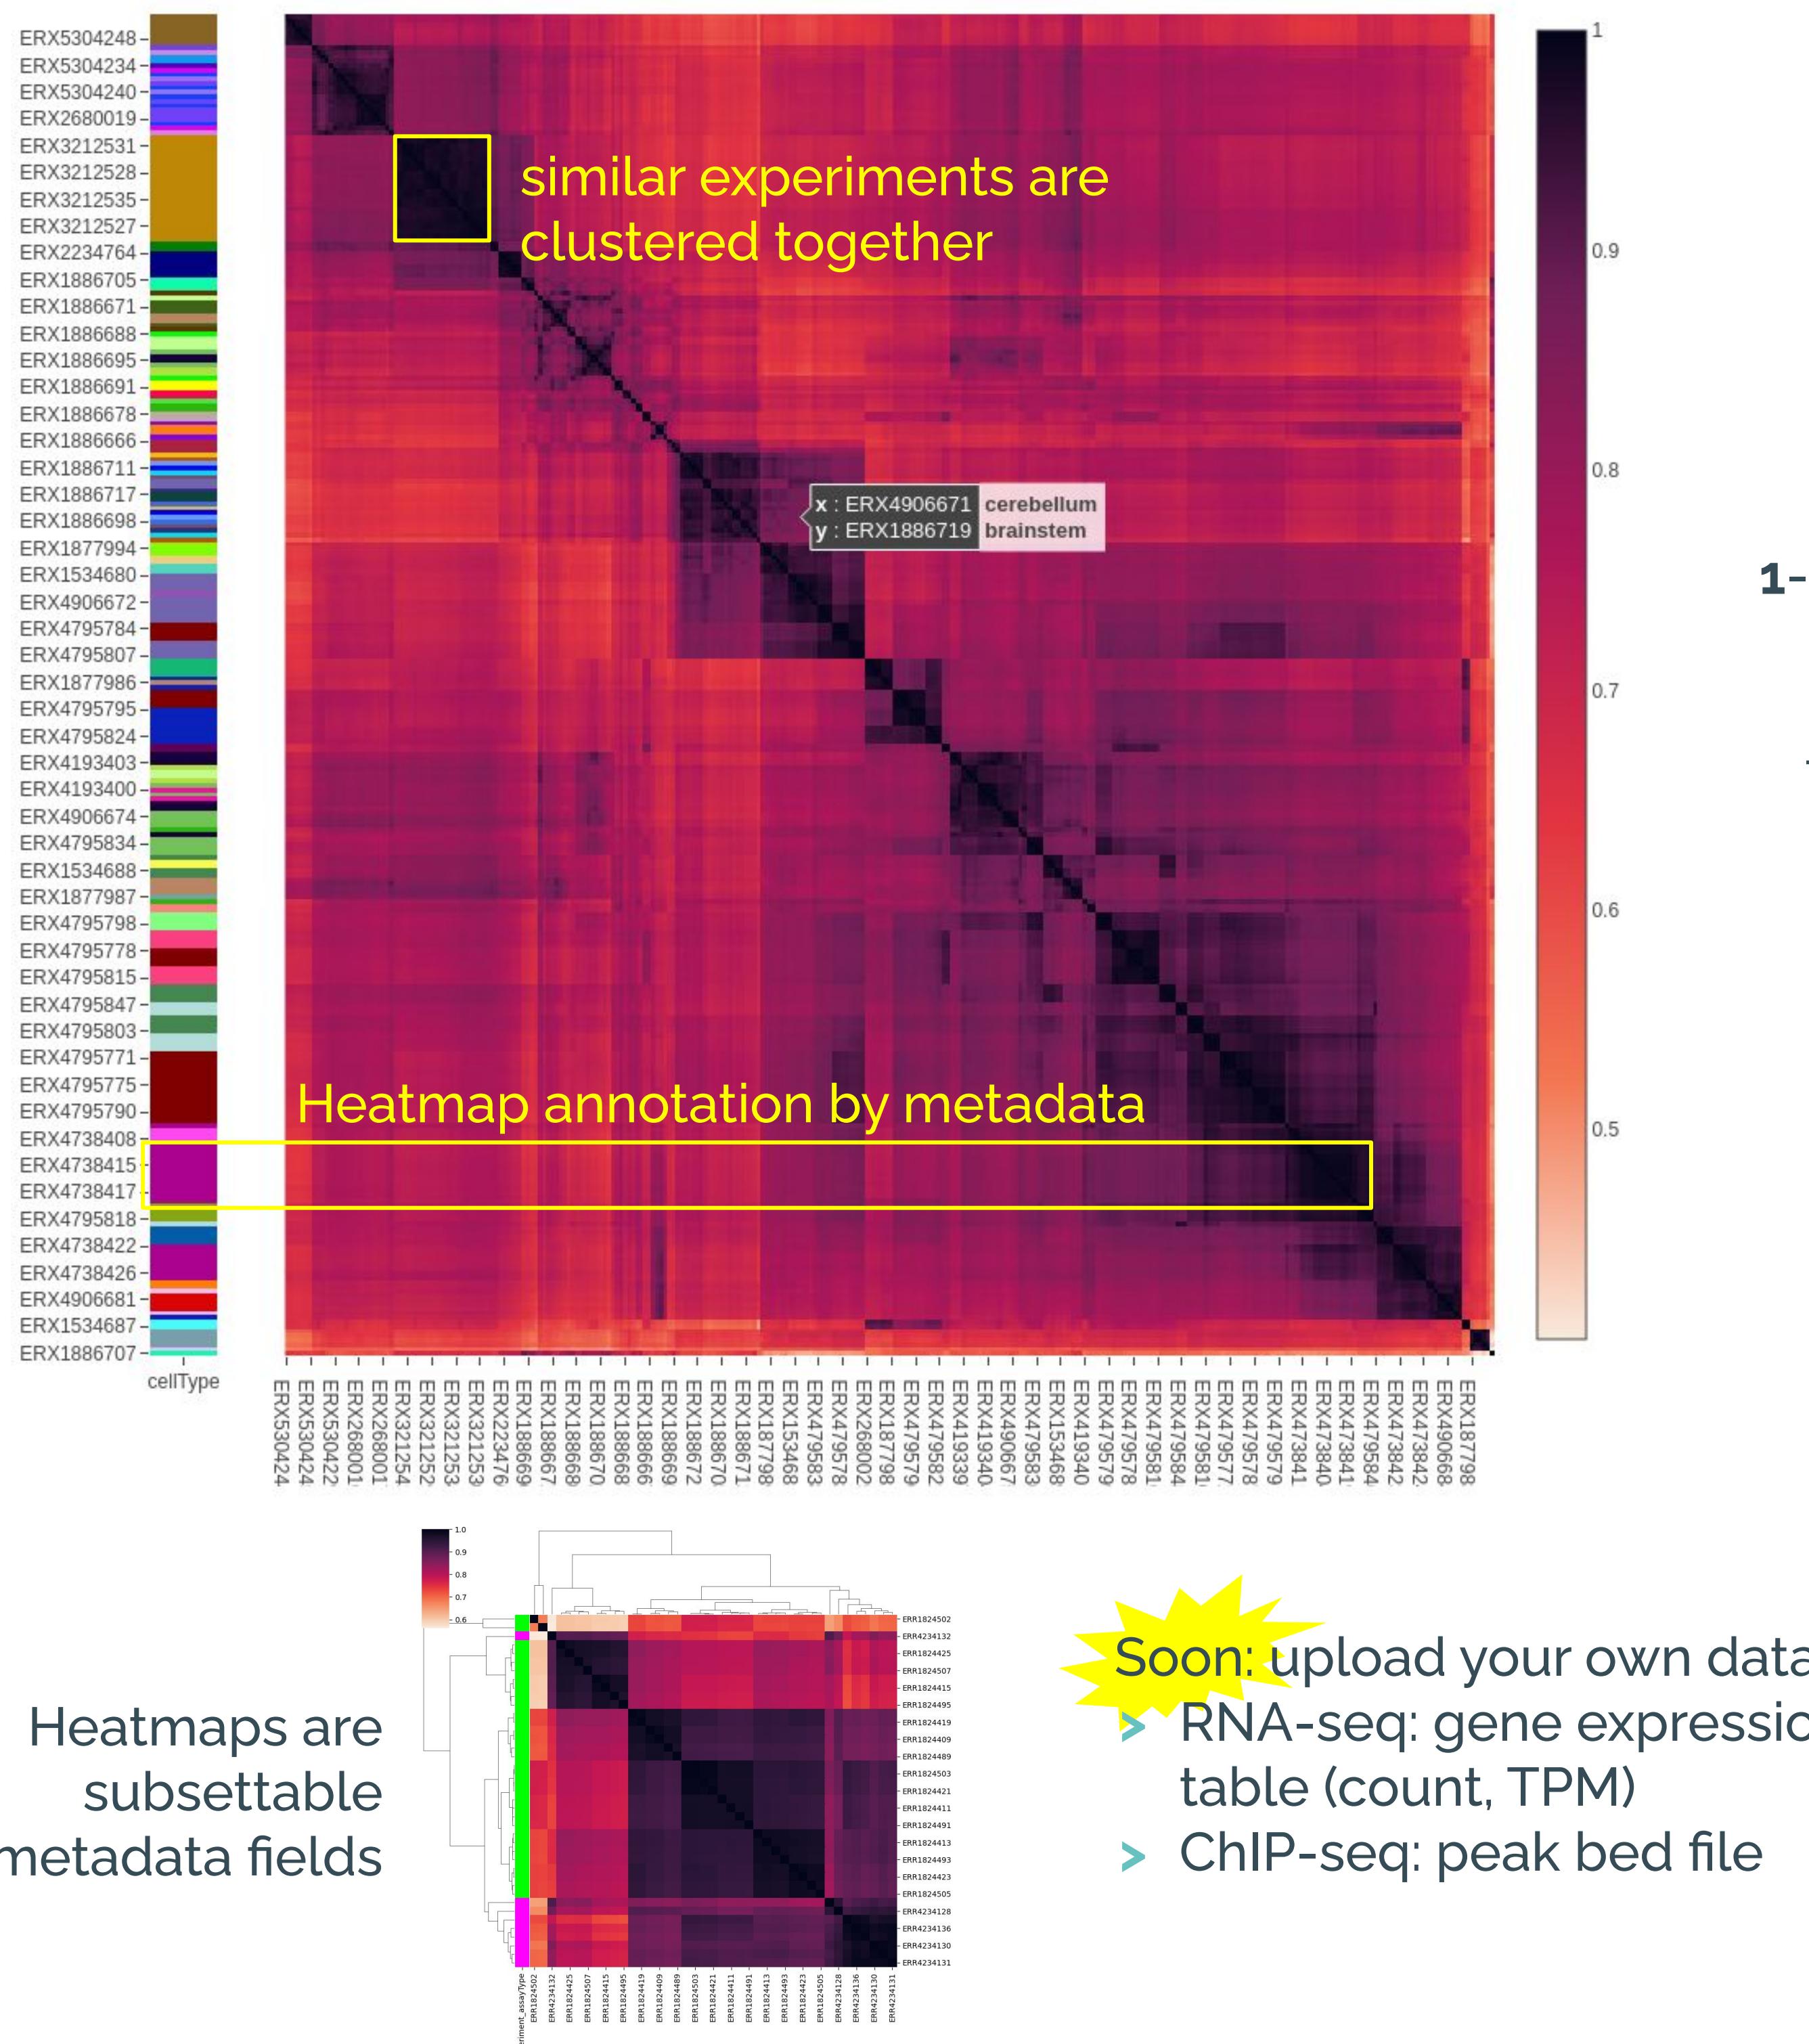

- Functional Annotation of Animal Genomes (FAANG) is an open consortia gathering genome regulation data in farmed animals: 🐑🐖🐄🐎🐓🐟
- Raw genomic data and rich sample metadata are freely available through a data portal hosted at EMBL-EBI: [data.faang.org](http://data.faang.org)
- We aim to provide data visualisations of FAANG datasets (RNA-seq, ChIP-seq, ATAC-seq, DNA methylation), embedded to the FAANG data portal.
- Visualisations will provide an overview of the available data to foster data re-use.

## > Sample-to-sample correlation heatmaps

By species and by experiment types (RNA-seq, ChIP-seq, DNA methylation)

- overview of available data
- visualising the relationships between samples
- outlier identification

All FAANG pig RNA-seq experiments

## > Data processing nextflow & nf-core

Netflow pipelines based on nf-core:

- A Nextflow module to get metadata & download data
- Fast RNA-seq quantification using Salmon pseudo-aligner
  - Pearson correlation on  $\log_{10}(\text{TPM} + 1)$
- ChIP-seq processing using bwa and macs2
  - Jaccard index from bedtools

## > Notable by-products

Uniformly processed outputs on FAANG data:

- FastQC reports
- Gene and transcript expression matrices (count & TPM)
- ChIP-seq peaks and bigwig tracks

## > Epigenetic profiles at TSS

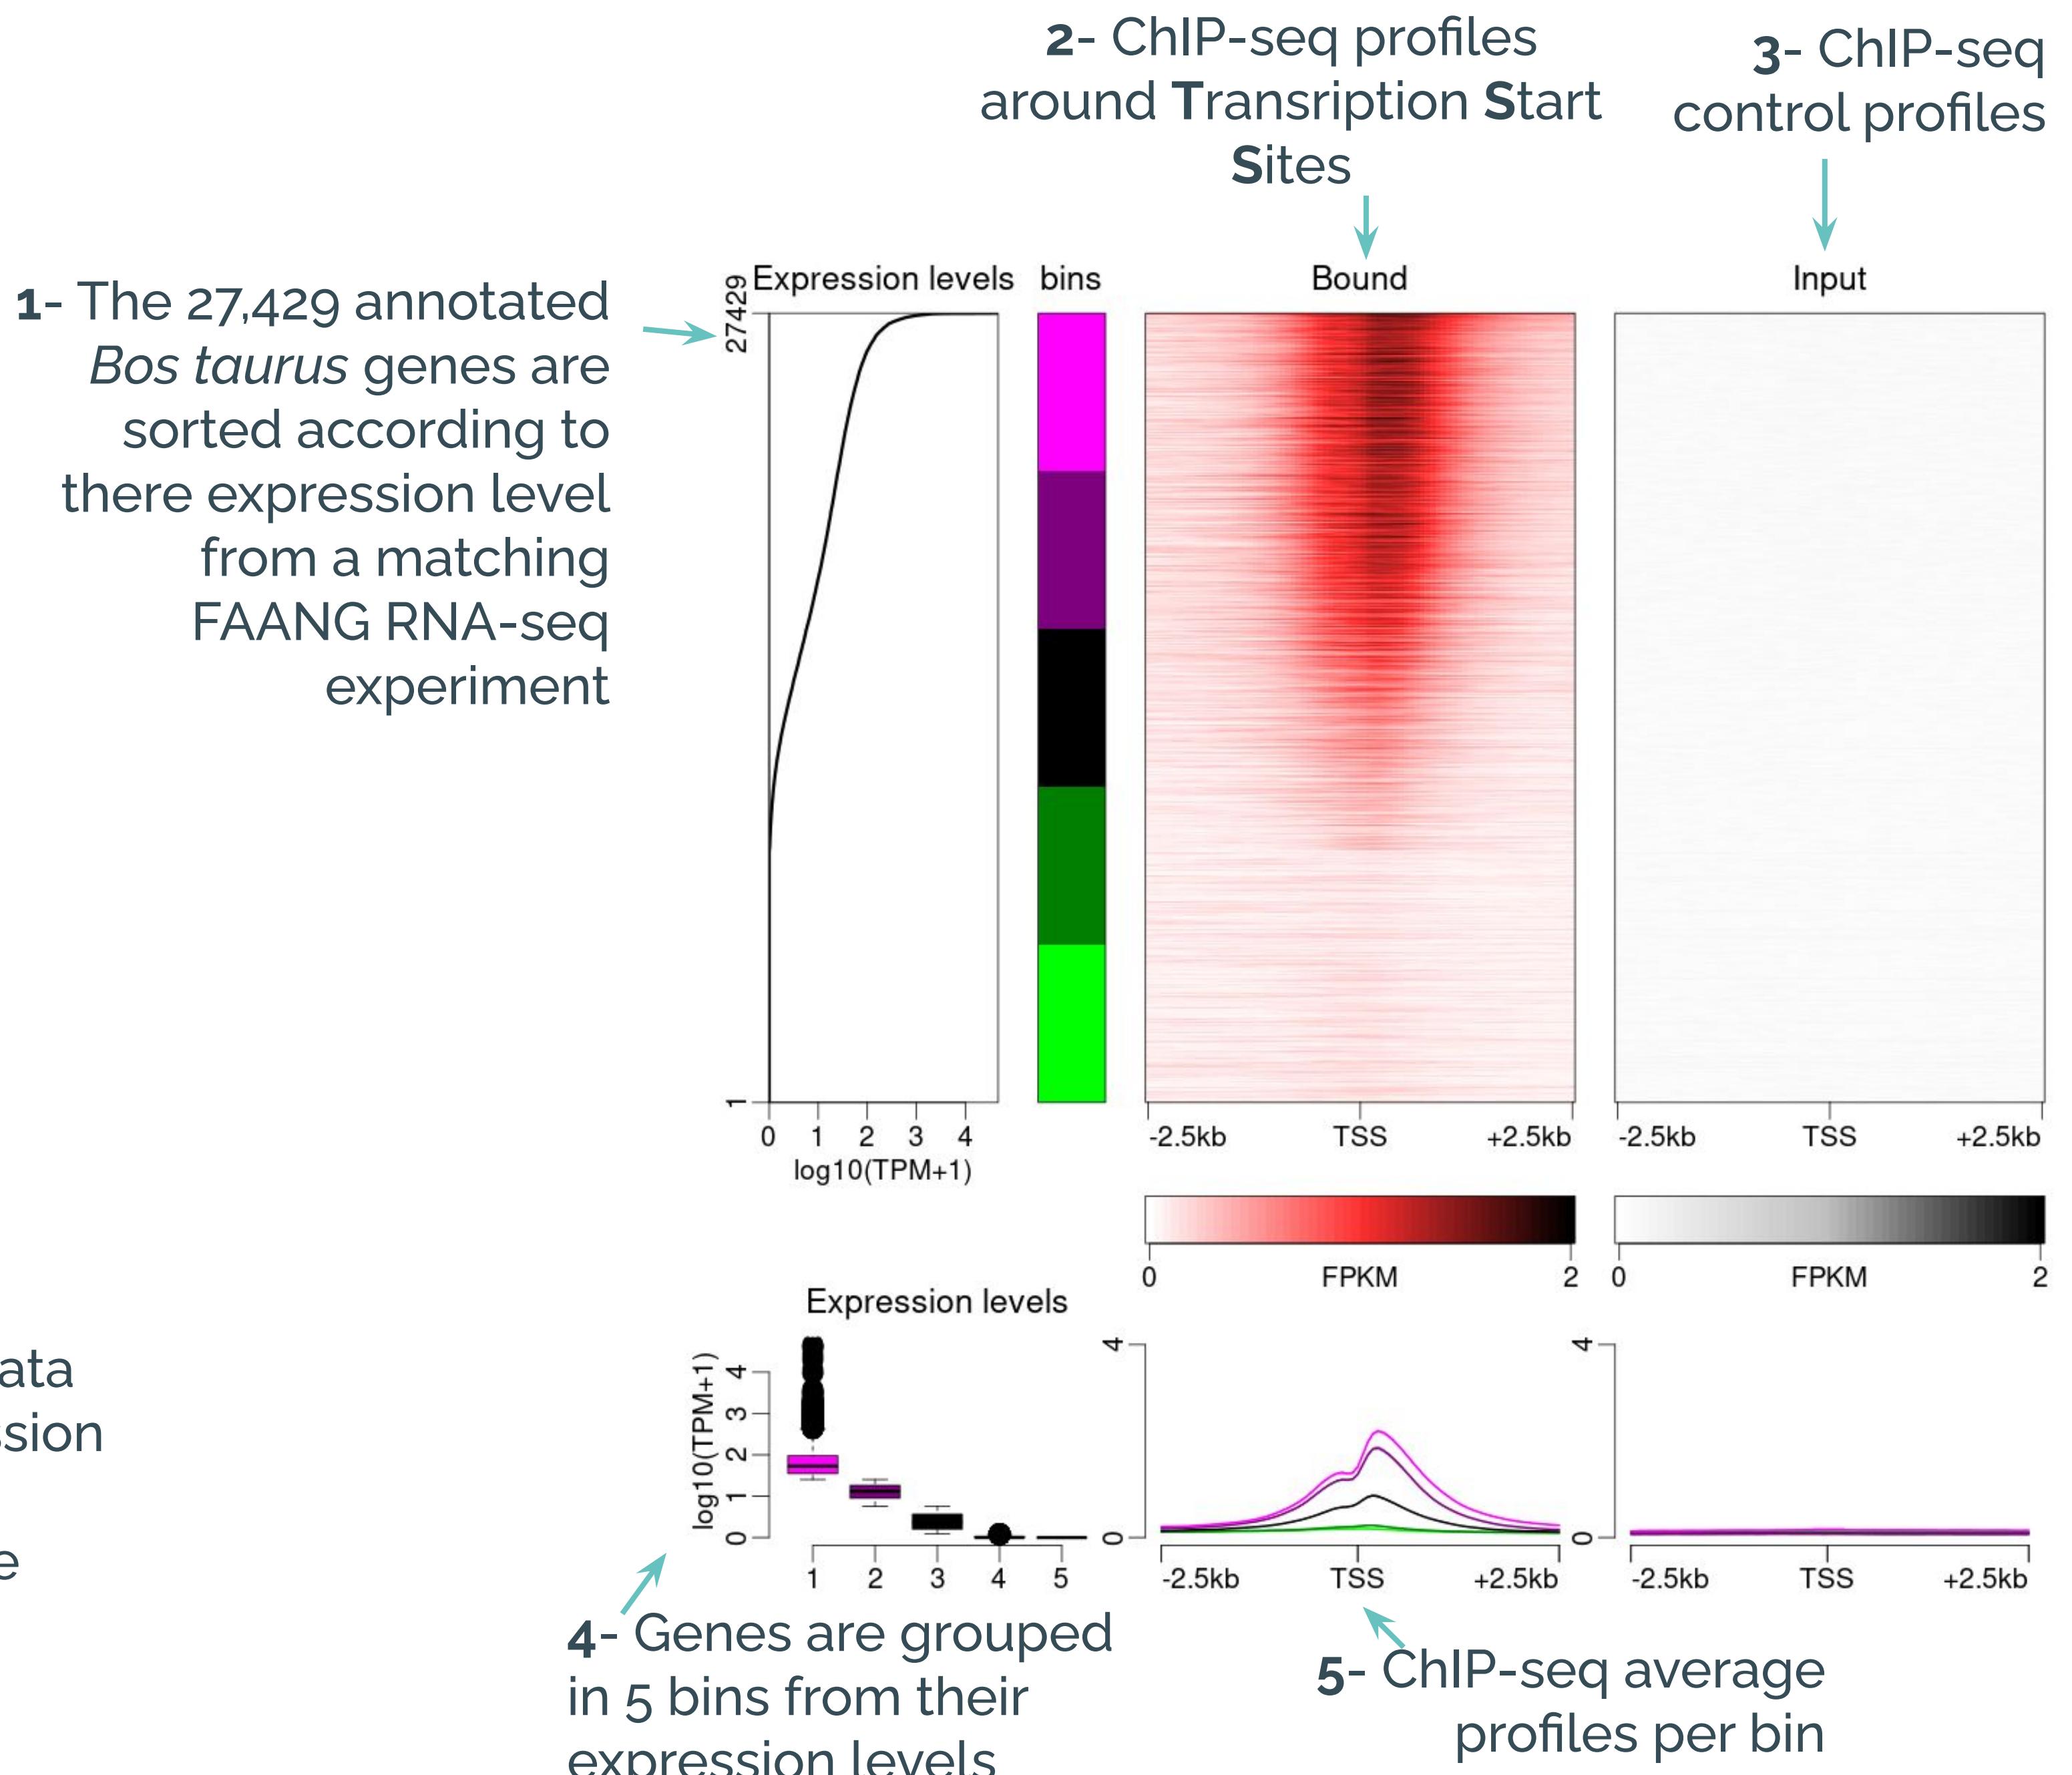

Generated using the R package Epistack:

> [github.com/GenEpi-GenPhySE/epistack](https://github.com/GenEpi-GenPhySE/epistack)

Integrative analysis of RNA-seq and ChIP-seq / DNA methylation data:

- data quality
- exploratory analysis

H3K4me3 ChIP-seq from a cow cerebellum

## > Web applications

Soon: a dedicated web-app for visualisations

Soon: integrations to the data.faang.org portal

## > Fundings

VizFaDa is funded by an Open Science Grant from ANR. The FAANG data portal is supported by the H2020 awards to AquaFAANG (grant no. 817923), GENE-SWiCH (grant no. 817998) and BovReg (grant no. 815668) and the EMBL
