Submitted on 5 Dec 2022

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Collaborative validation of visual data through the Pl@ntNet identification system

S. Dufour-Kowalski, J. Salinier, A. Peronnet, J. Carré,
J.-P. Milcent, H. Goëau, A. Joly, N. Boujemaa,
P. Bonnet, J. Barbe, J.-F. Molino, D. Barthélémy

Context & challenges

Accurate knowledge of **plants** (distribution and ecology) is essential for **sustainable agriculture** and **biodiversity conservation**

But accessing basic information about plants is still challenging

Botanical data is:

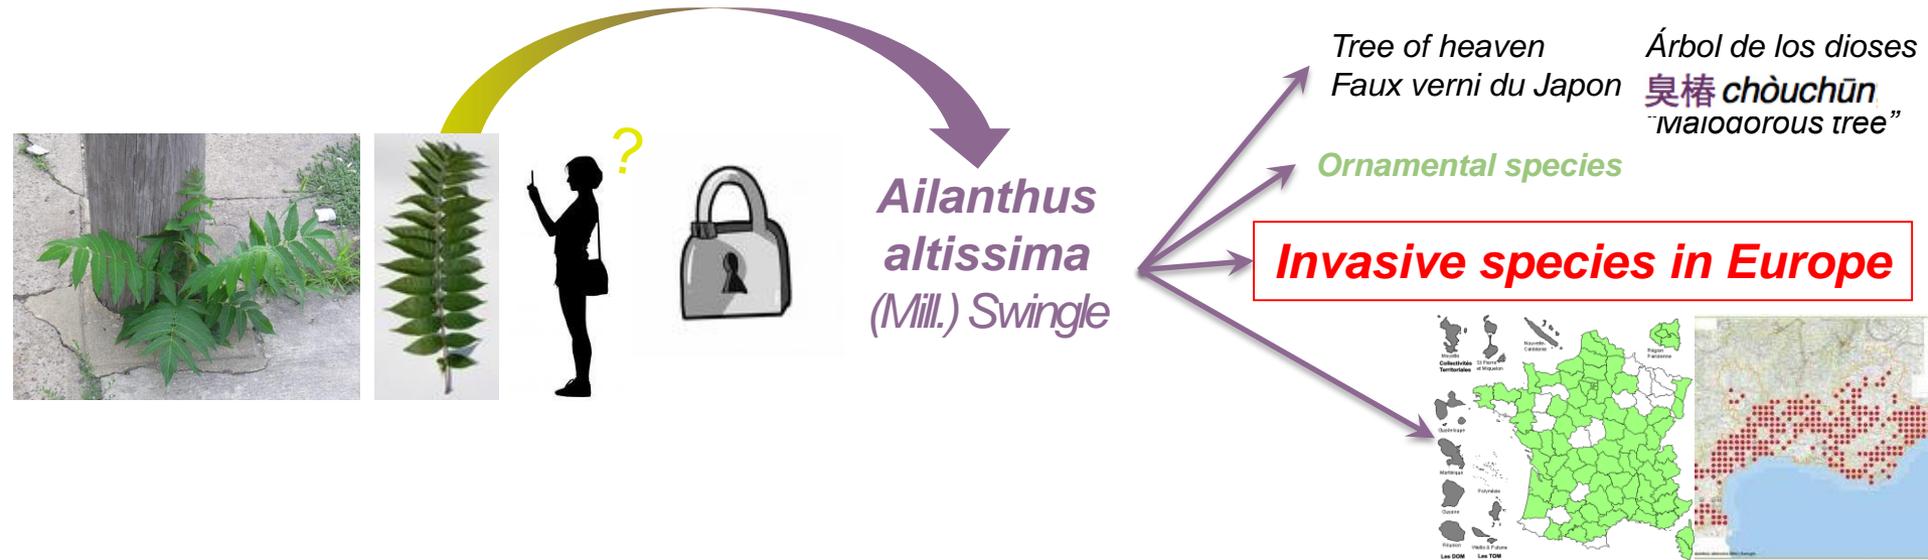

- ❖ *decentralized and heterogeneous*
- ❖ *complex* (un-structured tags, empirical measurements,...)
- ❖ *sparse and incomplete*
 - *huge & unknown number of species*
 - *"long tail distribution" (1 record per species !)*

Towards bridging the taxonomic gap

Identifying and naming plants is a very difficult task

Plant names are the **KEY** to access and to enrich botanical information on plants

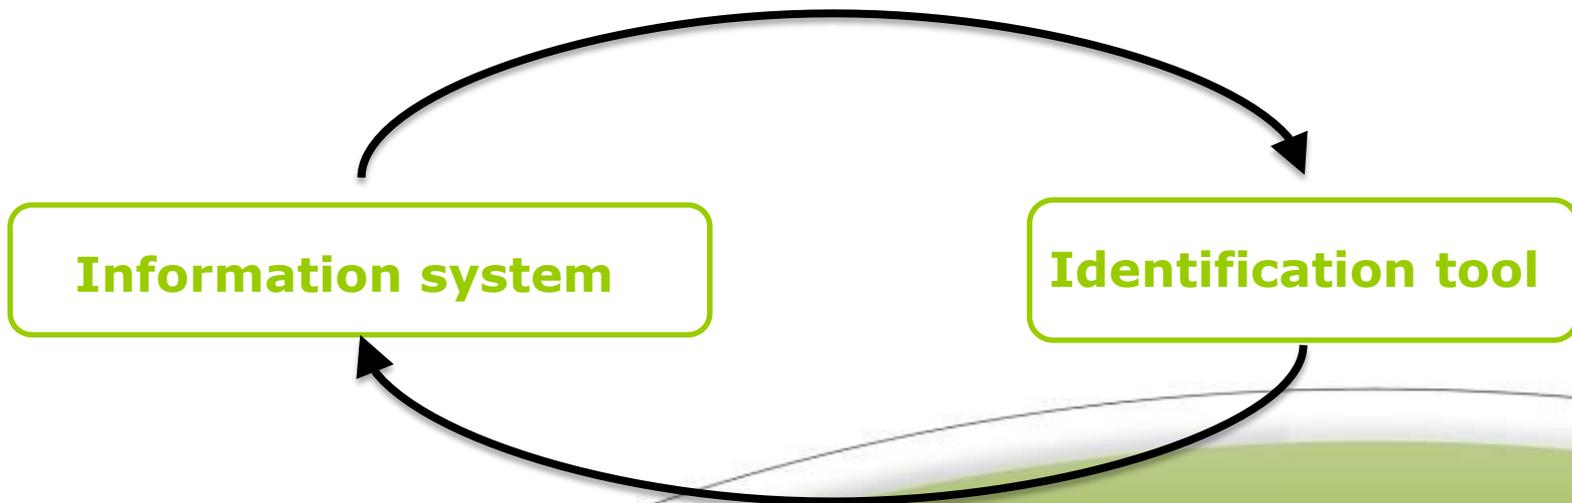

Towards bridging the taxonomic gap

Possible solutions

- ❖ **Collaborative Information Systems**
Sharing and speeding up integration of raw data
- ❖ **Large audience Identification Tools**
Multimedia image retrieval techniques ...

But ...

Few, small, biased datasets

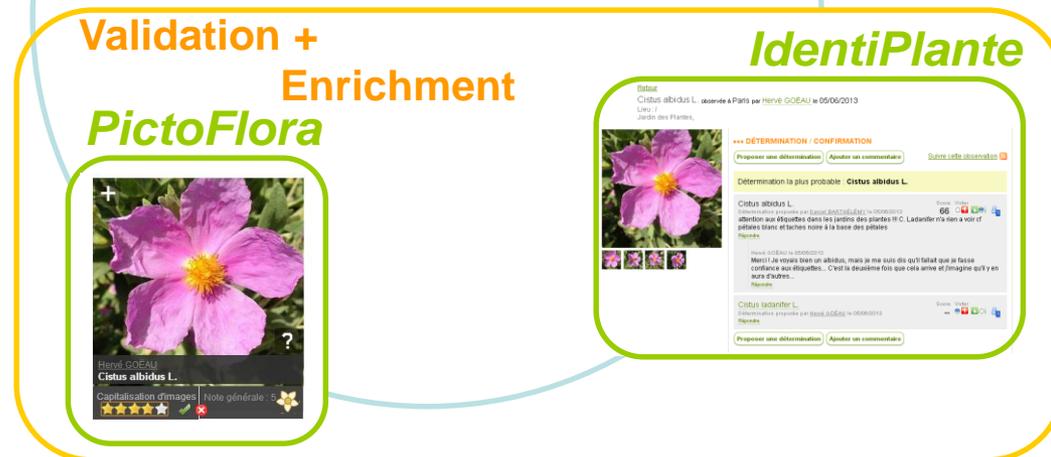

• **Validation / Data quality ?**

Pl@ntNet Workflow

- Image sharing and retrieval app for plant identification
- Shared observations (Creative Commons)

- Botanical obs. management system (pictures, species, date, GIS, author)

- Collaborative images annotation system

- Tags (flowers, leaves, etc.)
- Quality evaluation

• Joly & al., 2013. Ecological informatics.

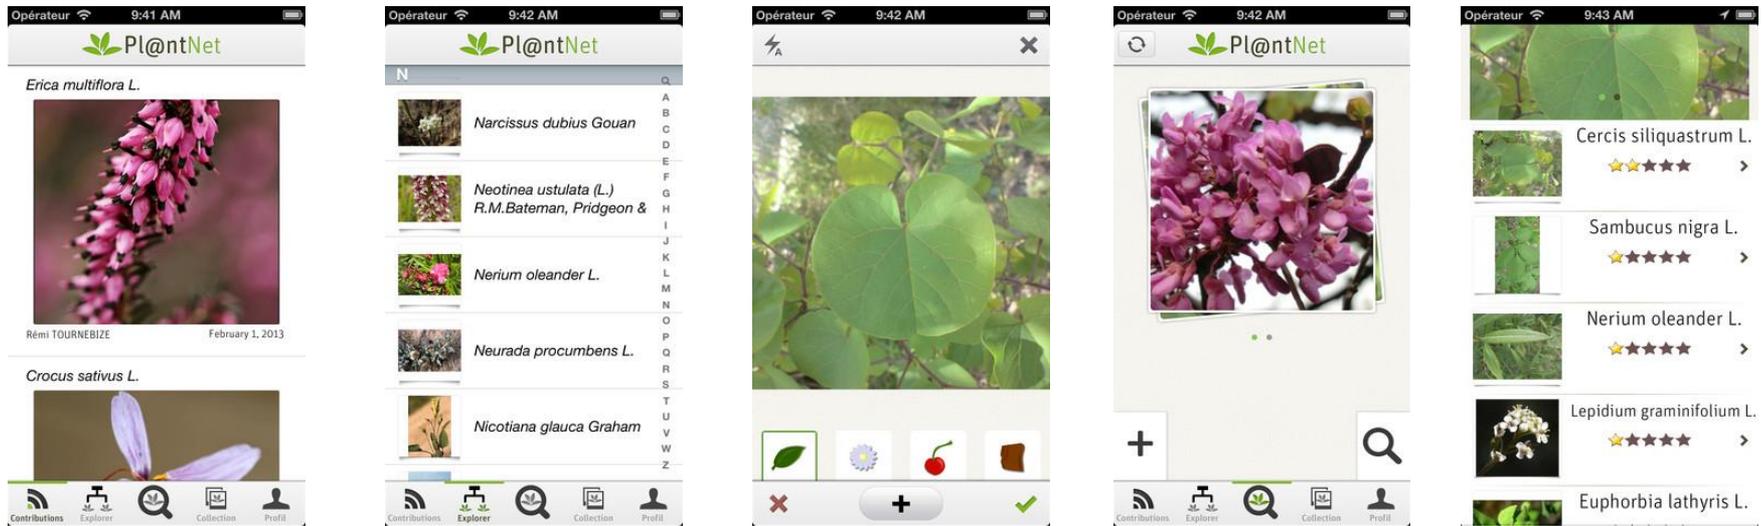

- Collaborative Identification

- Identification suggestion
- Identification vote
- Forum

Pl@ntNet mobile app

iPhone

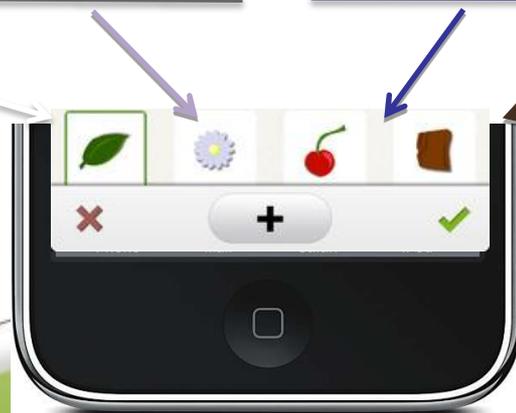

• Goëau & al., 2013. ACMM.

Public version

70 000 images

3 700 species

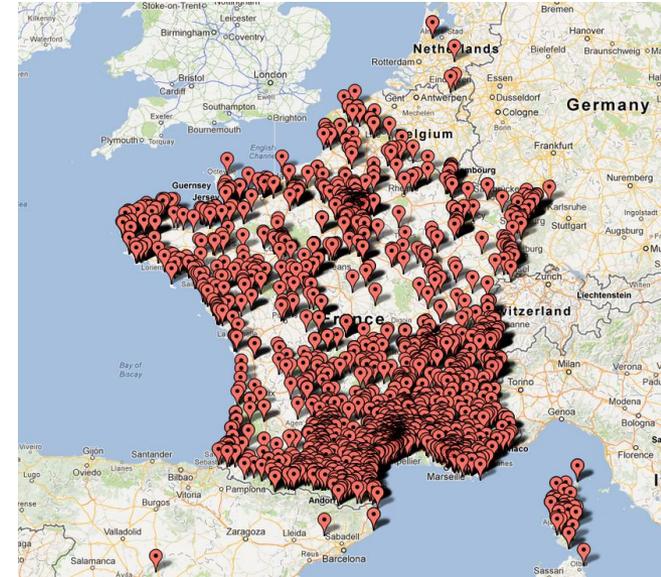

BETA

105 000 images

5 000 species

Dataset based on social network of botanists

- ❖ 21 500 members
 - From amateur to expert botanists
- ❖ Hundreds of contributors with different skills
 - with their own scanners, cameras & Smartphone
- ❖ Thousands of individual botanical records
 - at different growing stage,
 - different periods of the year,
 - under different light conditions (raining, sunny, ...)

A huge visual diversity to canalise

PI@ntViews dataset

Leaf diversity

Leaf at different growing stage of *Platanus x hispanica* Mill ex. Münchh. (London plane)

Spring 2012 Summer 2010
Autumn 2011 Winter 2011

Shooting conditions and used devices, *Acer platanoides* L. (Norway mapple)

Lobe number and deep of leaf lobes on *Ficus carica* L. (Common fig)

IdentiPlante, for Identification validation

The screenshot shows a web browser window with the URL www.tela-botanica.org/eflore/del/del.html#page_validation~1053197. The page displays a plant identification entry for *Sorbus aucuparia* L., proposed by Bernard ANDRIEU on 07/05/2014. A voting table shows 71% 'Votes Pour' and 29% 'Votes Contre'. Below the table, there is a comment section with a comment by Charlotte POLLET on 14/10/2013. The page also features a 'Proposer une détermination' button and an 'Ajouter un commentaire' button.

Votes Pour 71%		Votes Contre 29%	
David MERCIER	13/10/2013	Florent BECK	13/10/2013
Danièle DOMEYNE	14/10/2013	Charlotte POLLET	14/10/2013
Benoît BOCK	14/10/2013		
Jean-Claude ECHARDOUR	14/10/2013		
Et 1 vote anonyme			

Sorbus domestica L.
Détermination proposée par Florent BECK le 13/10/2013
On ne voit pas bien distinctement, cependant il me semble que la dentation des folioles ne descend pas jusqu'à leur base (ce qui devrait être le cas pour *Sorbus aucuparia*) mais s'arrête vers le tiers inférieur pour se terminer par une marge lisse, ce qui conduit à *Sorbus domestica*.

Charlotte POLLET le 14/10/2013
Sorbus domestica n'a pas des fruits rouges mais plutôt jaunâtres/rosés et plus ovales. Pour moi il s'agit de *sorbus aucuparia*.

PictoFlora, for Tags and image quality evaluation

The screenshot shows the PictoFlora website interface. At the top, there are browser tabs and the URL www.tela-botanica.org/eflore/del/del.html#page_recherche_images. A welcome message in French states: "Cette galerie vous permet de rechercher les illustrations des membres du réseau issus du Carnet en ligne... et de voter pour la qualité des images selon un protocole défini." Below this, there is a search bar with the text "Recherchez par espèce, genre, famille, numéro ou son de département, commune, arbre ou mot-clé..." and a "Rechercher" button. A "RECHERCHER ET VOTER" section is also visible. The main content is a grid of 12 plant images, each with a voting interface. The first image is *Hibiscus ovalifolius* (Forsk.) Vahl, which has a 5-star rating highlighted in yellow. Other images include *Viburnum tinus* L., *Viscum album* L., *Allium sphaerocephalon* L., *Diploxaxis erucoides* (L.) DC., *Ruscus aculeatus* L., *Guaiacum officinale* Linnaeus, *Clematis flammula* L., *Drosera rotundifolia* L., *Pieris hieracioides* L., and *Colchicum neapolitanum* (Ten.) Ten. Each image has a "Votez !" button and a star rating system.

User can see its **own votes**

Each picture can be tagged

According to visual concepts of PI@ntNet Identification app

63 000 tags
137 000 votes

70 000 images / 3 700 species

Future directions

- ❖ Invest in user profile
(for a specific region, or group of taxa)
- ❖ Use all the data according to their quality
- ❖ Use some automatic algorithm to tag data
- ❖ Use of meta data in the identification and the validation process (localisation and/or date).
- ❖ Apply this workflow on other botanical (or non botanical) datasets
