## RÉVOLUTION NUMÉRIQUE

(Lajoie-O'Malley et al., 2020)

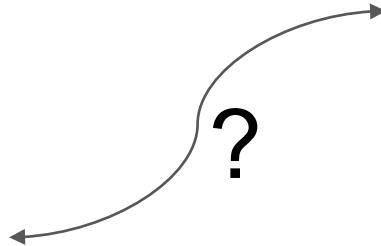

# Introduction

---

**Purpose : Show the diversity of digital use patterns and to explain how these patterns connect to different forms of agricultural ecologisation**

*Image : Pillaud, 2015*

**Ecologisation**

---

## 2. Background : digitalisation and ecologisation

# Trajectories

---

## Digitalisation

- DTP :Digital Technologies for Production
- DTC : Digital Technologies for information and communication

## Ecologisation

- Optimisation
- Re conception

# Trajectoires

---

## Digitalisation

- DTP : Digital Tech

Proposition 1 : the use of DTP is associated with weak forms of ecologisation that are intertwined with industrial economic models of farming

- DTC : Digital Tech and communication

Proposition 2 : The use of DTC is associated with stronger forms of ecologisation, which are based on a reconception of production systems

## Ecologisation

- Optimisation

- Reconception

---

## 3. Method

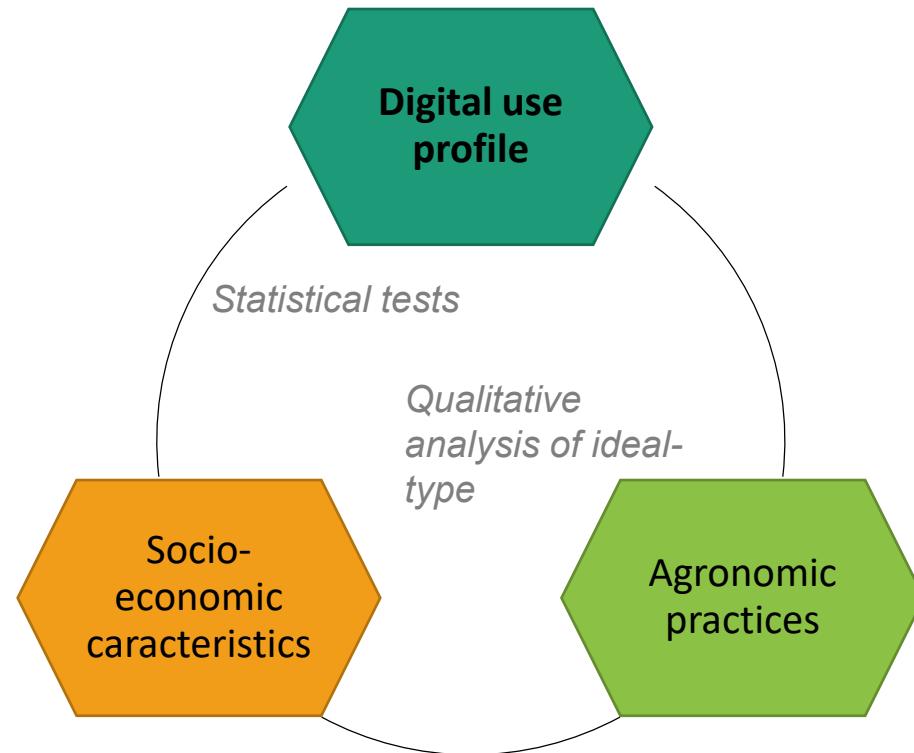

# A mixed method

98 interviews with cereal farmers  
in South-West France

*Hierarchical cluster analysis*

Digital use  
profile

*Statistical tests*

Socio-  
economic  
characteristics

*Qualitative  
analysis of ideal-  
type*

Agronomic  
practices

---

## 4. Results

# Digital use profiles

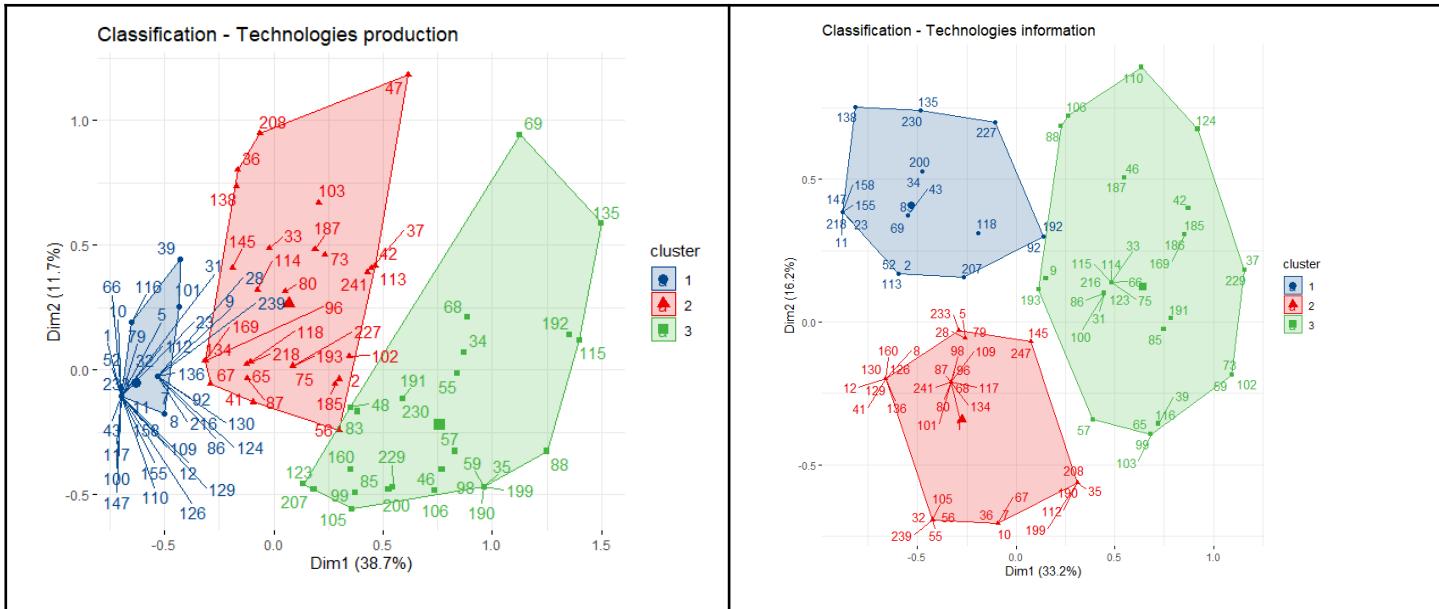

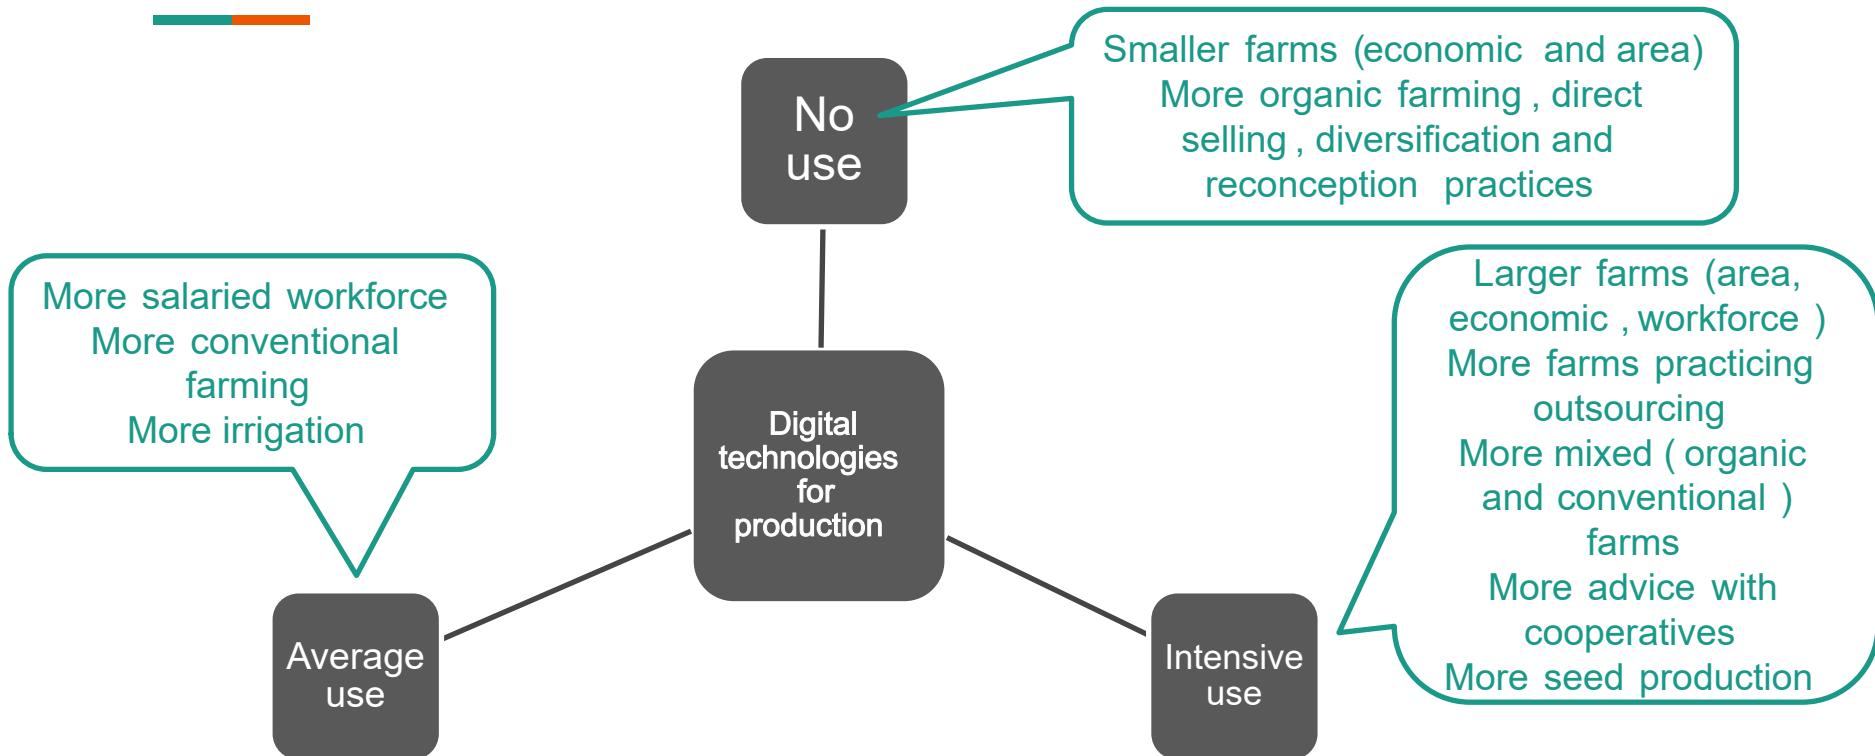

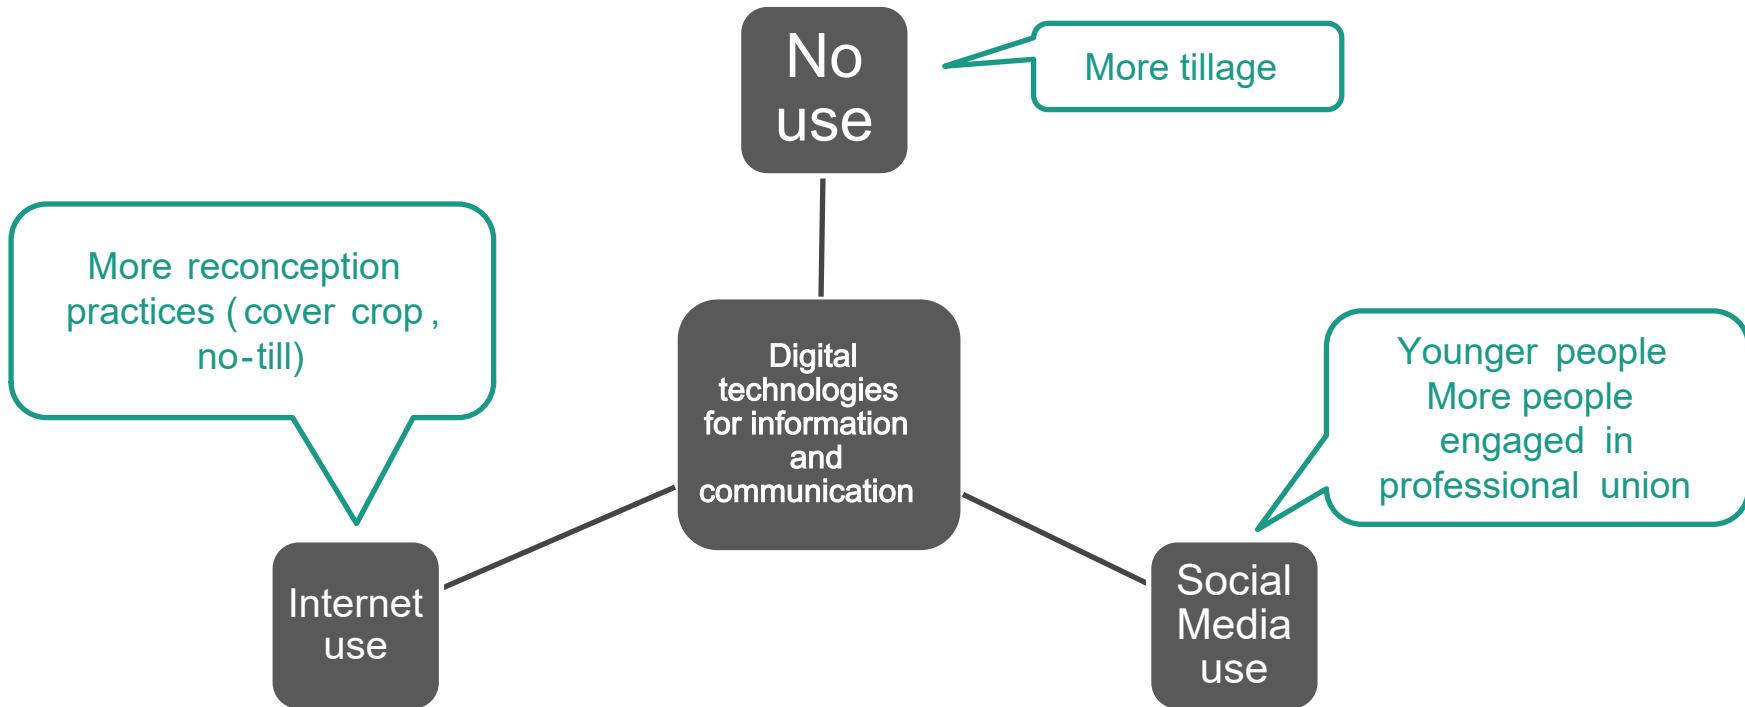

Figure 1 : résultats des classifications sur R

# Digital use profiles and ecologisation trajectories

# Digital use profiles and ecologisation trajectories

---

## 5. Discussion

# Digitalisation & Ecologisation

---

- A diversity of digitalisation trajectories coexist
  - Non-linearity of the process of digitalisation ( phenomena of technologies abandonment )
  - Non adoption of digital : coherent choice that matches their practices and objectives, towards a different technological trajectory
- 
- **The use of DTP is linked with the industrialisation of farming models**
  - Economic size =capacity to invest in digital (farm size or expansion through outsourcing)
  - DTP = a response to the specific needs of more industrial production models based on expansion, outsourcing activities, salaried employees, specialisation and intensification  
⇒ Reinforcement mechanisms
- 
- Organic farming: DTP is not adapted to their production system
  - The use of DTP seems to encourage optimisation over redesign.

# Digitalisation & Ecologisation

---

- **Digital use associates with more radical ecologisation trajectories**
- DTP : used to develop organic farming in industrial farms
- DTC : cause and consequence of changing practices toward more ecologisation
- **Roles of intermediaries and institutions**
- Seed and trading contracts : favour or even impose the use of DTP / decrease the use of DTC
- Advice within a cooperative : favours the use of DTP / decreases the use of DTC

# Perspectives and conclusion

---

Effects on farming trajectories ? Micro / macro

Roles of intermediaries and cooperatives

Digitalisation policies : not neutral , promote certain farming trajectory

# Thank you

---
