HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Farm forests

- High diversity
- Low management
- Increasing wood stock

Wood products

Energy

Domestic wood uses decreasing BUT may regain interest in the context of higher energy costs

Farm forests are less harvested than the other productive forests. They have a potential to provide more local wood

Biodiversity

Ecosystem services

Low conservation value BUT may contribute strongly to the development of agroecology

A matter of scale: Landscape, territory, watershed, etc. are the levels where bioenergy and biodiversity can converge

Commons and anti-commons theoretical frameworks

A better collective management is required to conciliate both outputs
