**Type** Package

**Title** Hydro-Meteorological Catchments Datasets for the 'airGR'  
Packages

**Version** 0.2.1

**Date** 2023-07-11

**Description** Sample of hydro-meteorological datasets extracted from the 'CAMELS-FR' French database <<https://hal.inrae.fr/hal-03687235>>. It provides metadata and catchment-scale aggregated hydro-meteorological time series on a pool of French catchments for use by the 'airGR' packages.

### Description

Sample of hydro-meteorological datasets extracted from the 'CAMELS-FR' French database <<https://hal.inrae.fr/hal-03687235>>. It provides metadata and catchment-scale aggregated hydro-meteorological time series on a pool of French catchments for use by the 'airGR' packages. More especially, it can be used by teachers and students for hydrological modeling exercises adapted to the 'airGRteaching' package as described in Delaigue et al. (submitted) and in the 'airGRteaching' vignettes.

The package contains the following types of datasets:

- **lumped\_daily**: a set of lumped catchment daily hydrometeorological time series, and associated metadata.

### Description

The meteorological forcing is derived from the SAFRAN reanalysis (8 km resolution grid) produced by Météo-France (Vidal et al., 2010).

The meteorological forcing is aggregated at the catchment scale and merged to streamflow data in the CAMELS-FR database from INRAE (Delaigue et al., 2022). To do that, boundaries, area and elevation are calculated using the SRTM DEM (Werner, 2001); the stations were snapped on a theoretical river network by INRAE (100 m resolution grid).

The streamflows, codes and name of hydrometric station are provided by the SCHAPI (the French Central Hydrometeorological and Flood Forecasting Support Service) on the Hydroportail website (SCHAPI, 2022). Streamflows are converted into mm/d using the DEM-based area.

**Format**

[list] of 3 elements:

Meta [list] metadata

- Code [list] of 2 [character] codes of the hydrometric station (H3: code since 2022, H2: former code)
- Name [character] name of the hydrometric station (H3)
- Coord [list] of 2 [numeric] coordinates (X and Y) of the catchment outlet [decimal degrees; epsg: 4326]
- Area [numeric] area of the catchment [km<sup>2</sup>]

TS [data.frame] catchment daily time series from 1999-01-01 to 2018-12-31

- Date [POSIXct] dates (timezone = "UTC")
- Ptot [numeric] total precipitation (liquid + solid) [mm/d]
- Temp [numeric] mean air temperature [°C]
- Evap [numeric] total potential evapotranspiration computed with Oudin's Formula (Oudin et al., 2005)
- Q1s [numeric] outlet streamflow [l/s]
- Qmmd [numeric] outlet streamflow [mm/d]

Hypso [numeric] hypsometric values (101 quantiles from 0 to 100 % of the elevation range of the catchment) [m]
