HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Support agroecological transitions for orphan crops

Hybridization and knowledge creation for plantain in Guadeloupe

Research Team

UE PEYI

Marie BEZARD, Nadine ANDRIEU, Carla BARLAGNE, Valérie ANGEON, Jean-Louis DIMAN & Harry OZIER

Plantain Banana
(*Musa* spp. AAB)

- ✓ A crop for local market
- ✓ But few research studies
- ✓ Important knowledge gaps

How to generate and aggregate knowledge required to understand the innovation dynamics that can support agroecological transitions ?

1

Start with a *scale* known to the farmers and accessible to researchers Use a *method* to bring out and aggregate existing knowledge

Plantain farms & cropping systems

Co-design & semi-structured interviews

Characterize the **diversity** of existing practices and strategies Identify the **knowledge gaps** hindering to the agroecological transitions

Ecophysiology

Mobilize other disciplines to fill the knowledge gaps

Sociology

2

Plant

Controlled conditions

Optimize an on-farm plantain multiplication and sanitation technique

3

Agricultural Innovation System

Semi-structured interviews

Understand the role of actors' networks in the dissemination of alternative practices

Economy & Geomatic

4

Socio Technical System

Semi-structured interviews, Image Analysis and Prices

Study the role of the dominant system in agro-ecological transition dynamics within niches

The benefits of a multi-scale and transdisciplinary approach ?

Combining scientific and non-academic knowledge it allowed to identify and design technical and organizational alternatives for orphan cropping systems (plantain-based systems) in Guadeloupe
