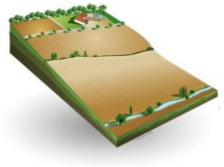
CONTEXT: CARBON FARMING and MRV

Agro-ecosystems and carbon storage:

- 4/1000 (Minasny et al. 2018, Amelung et al. 2020)
- Conservation, tillage, cover crops … => Carbon farming

National & international Initiatives:

- Label bas carbone (France)
- GREEN deal
- Voluntary carbon market



cover crops
crop rotations
agroforestry

Soil monitoring, reporting and verification framework
adapted from Smith P. et al (2020) *Global Change Biology*

CONTEXT: CARBON FARMING and MRV

Agro-ecosystems and carbon storage:

- 4/1000 (Minasny et al. 2018, Amelung et al. 2020)
- Conservation, tillage, cover crops … => Carbon farming

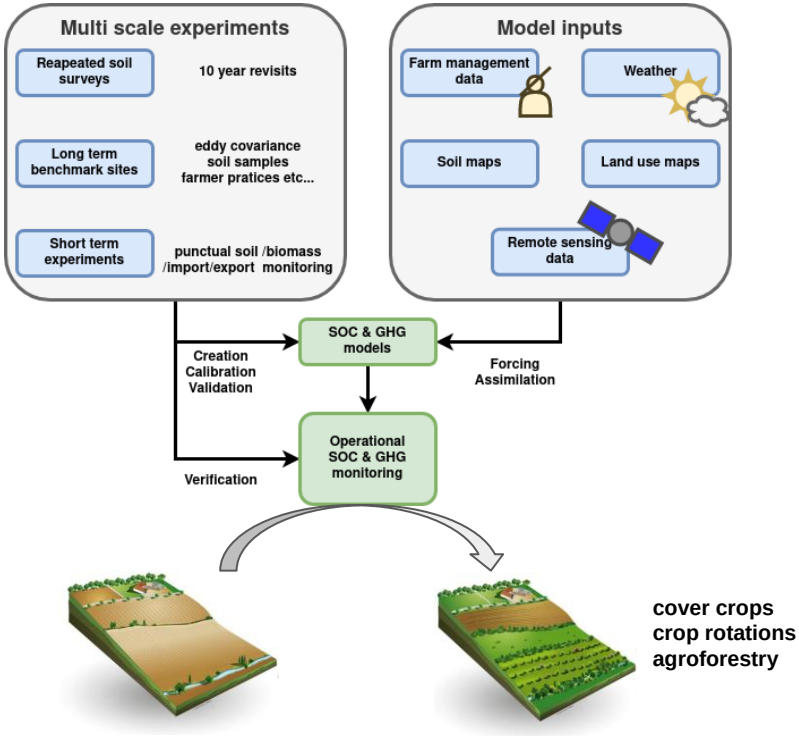
National & international Initiatives:

- Label bas carbone (France)
- GREEN deal
- Voluntary carbon market

International scientific cooperation for soil carbon MRV:

- **CIRCASA**(2017-2021)
  - conceptual framework
- **ORCASA** (2022-2024)
  - methodological framework + Prototypes
- **IRC Soil Carbon** (2024-)

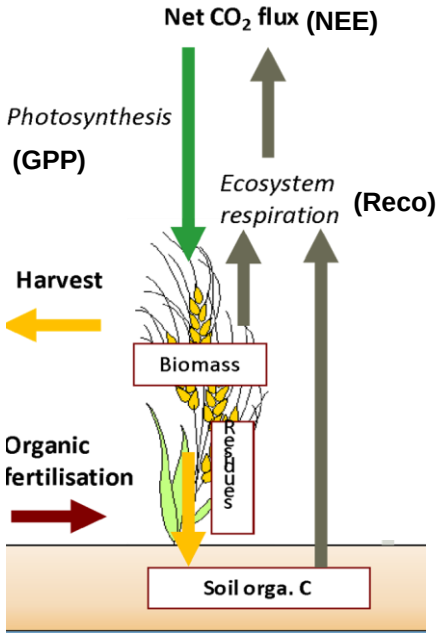
*For scaling, the **MRV framework** relies on **satellite products** & **models***



Soil monitoring, reporting and verification framework
adapted from Smith P. et al (2020) *Global Change Biology*

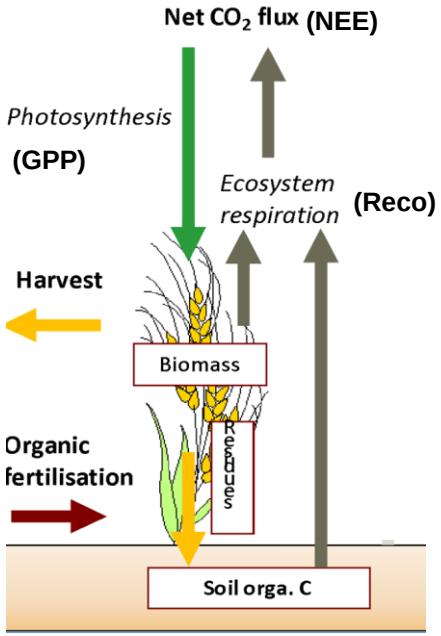
Objective: Quantify the carbon budget components

Process based approach => SAFYE-CO2 (Pique et al. 2020 A&B)



Objective: Quantify the carbon budget components

Process based approach => SAFYE-CO2 (Pique et al. 2020 A&B)



At large scale & intra field resolution:

- ➢ Regional/National Coverage
- ➢ Coherent with biophysical processes & management

Taking in account local growth variability

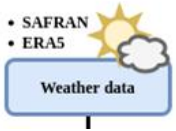
- ➢ Crop rotations ,cover crops, regrowths …
- ➢ Remote sensing data assimilation

Quality assessments for each component

- ➢ Extensive validation using field measurements
- ➢ Uncertainty estimations

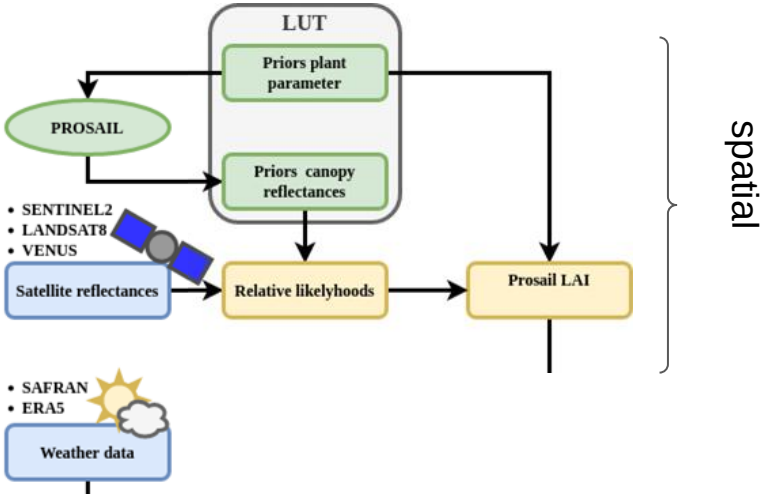
Argicarbon-EO =SAFYE-CO2+ bayesian assimilation

Overview of the Agricarbon-EO processing chain



Downloads, **colocates and regrids data:** plot contours, weather data (ERA5LAND/SAFRAN) from optical remote sensing data.

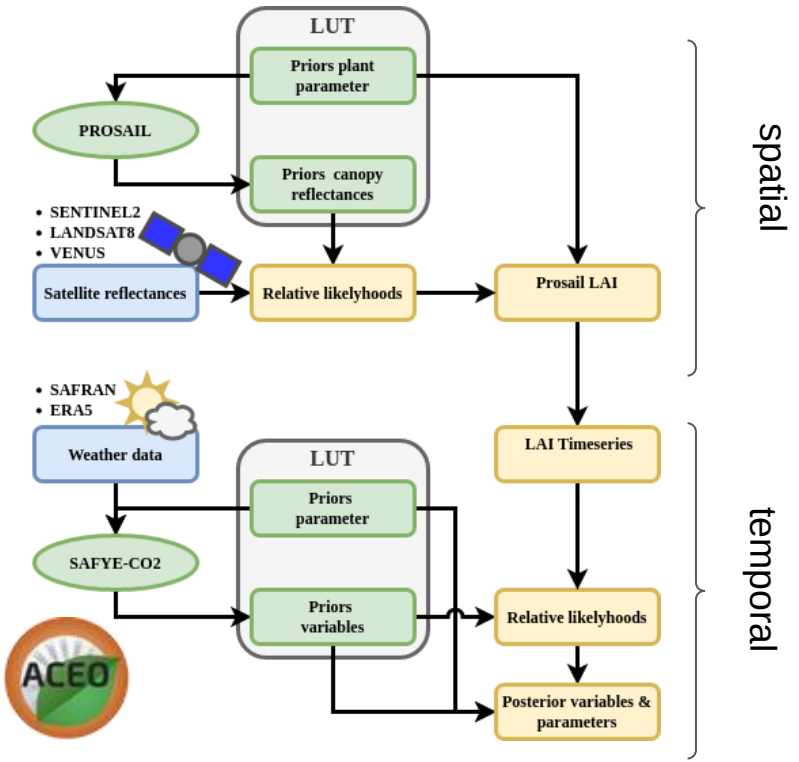
Overview of the Agricarbon-EO processing chain



Downloads, **colocates and regrids data** from optical satellites (Theia*), weather reanalysis ERA5LAND (ECMWF**)/SAFRAN & validation data

Bayesian LUT based Inversion of **Prosail** for each image to obtain **LAI +uncertainties**

Overview of the Agricarbon-EO processing chain



Downloads, **colocates and regrids data** from optical satellites (Theia*), weather reanalysis ERA5LAND (ECMWF**)/SAFRAN & validation data

Bayesian LUT based Inversion of **Prosail** for each image to obtain **LAI +uncertainties**

Bayesian LUT based assimilation of LAI time series into **SAFYE-CO2** to obtain **parameters and variables**

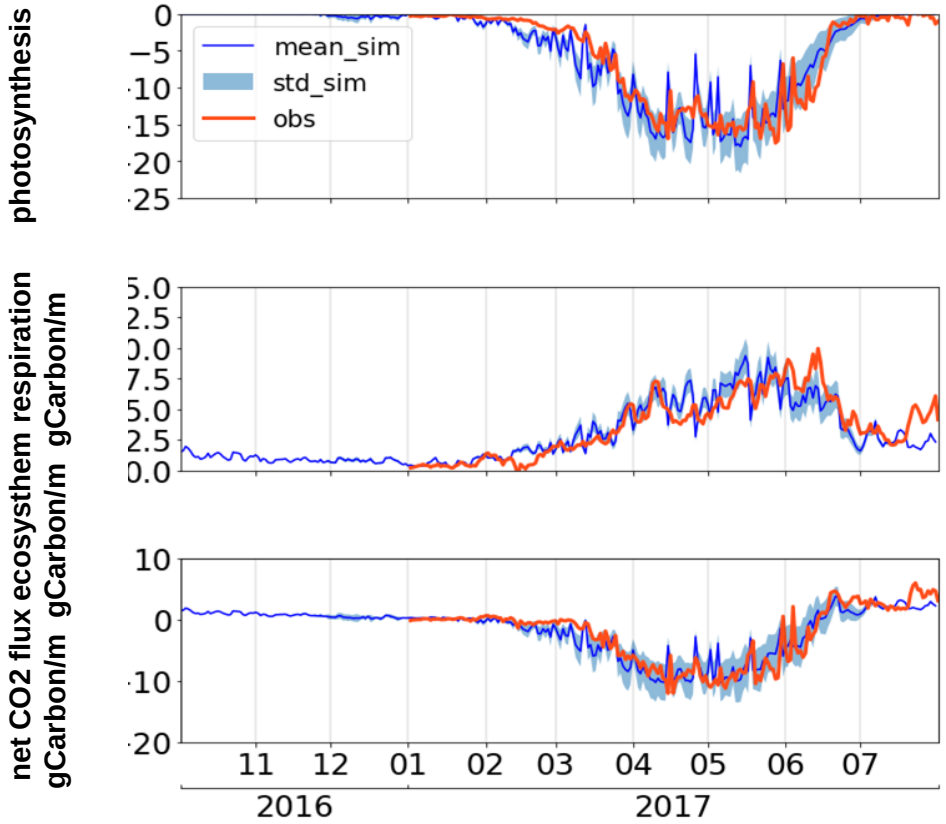
Produces

- Quality indicators & uncertainties
- Maps of variable & parameter as well as their distributions.

SAFYE-CO2 simulation over one Sentinel2 tile 4h

Validations of Agricarbon-EO Wheat: CO_2 fluxes

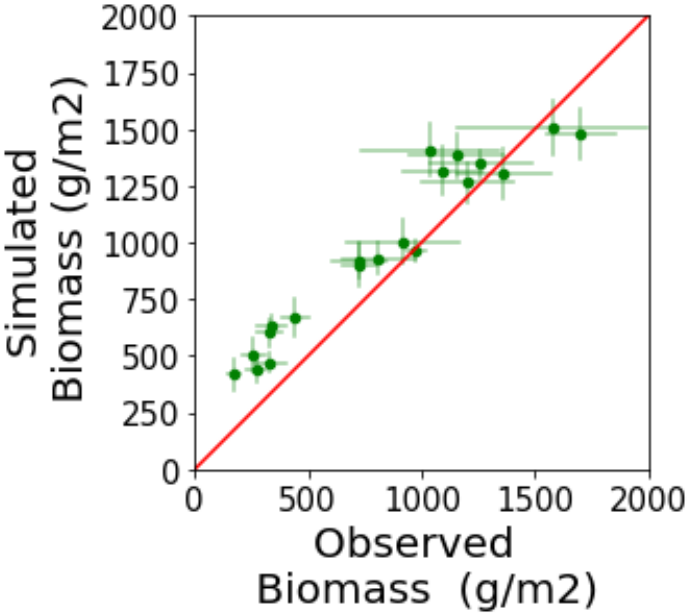
ICOS FR-Aur in 2017



- Slight overestimation of GPP at the beginning of the cycle
- Reco is less accurate
- Overall good performance

	RMSE	MAE	bias	R2
GPP	1.97	1.44	-0.41	0.90
Reco	1.12	0.87	0.08	0.75
NEE	1.55	1.18	-0.33	0.85

Validations of Agricarbon-EO Wheat: Biomass

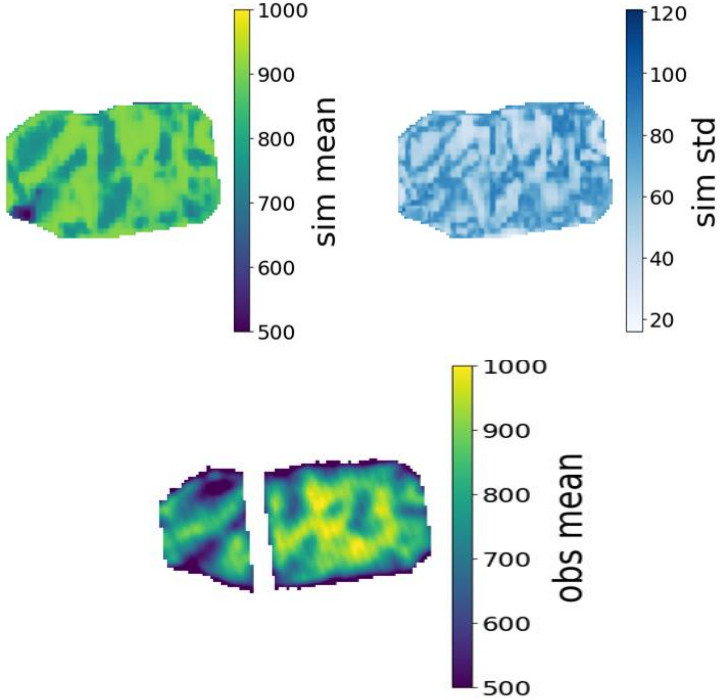


- Slight overestimation of biomass in the beginig of the growth
- High correlation and low errors given the measurement and model uncertainties

	RMSE	MAE	bias	R2
DAM	197.20	174.81	-138.75	0.92

Validation over punctual biomass field measurements in 2018

Validations of Agricarbon-EO Wheat: Yield

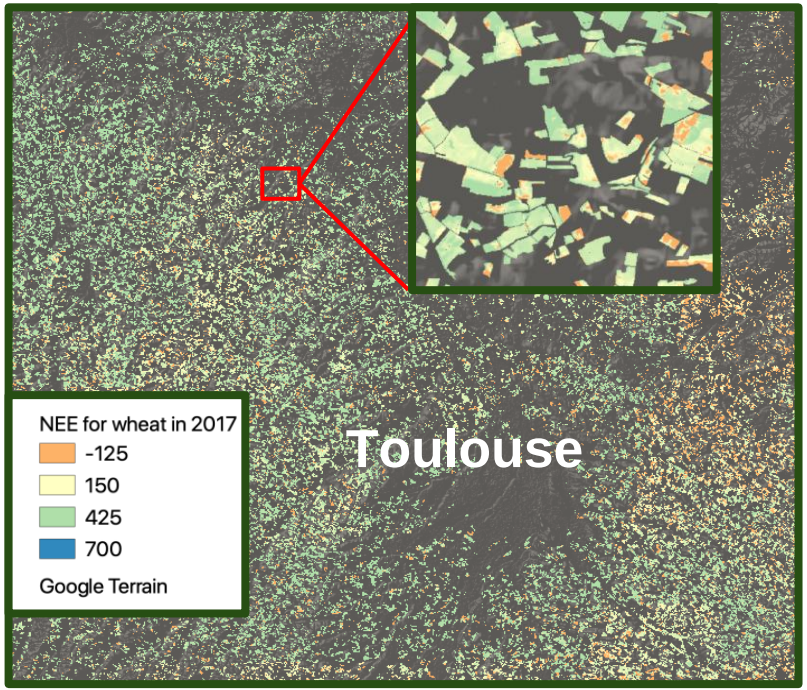


Validation using harvest maps in 2017

- Representation of spatial variability
- lack of amplitude in the simulations.
- more expertise on harvest maps needed

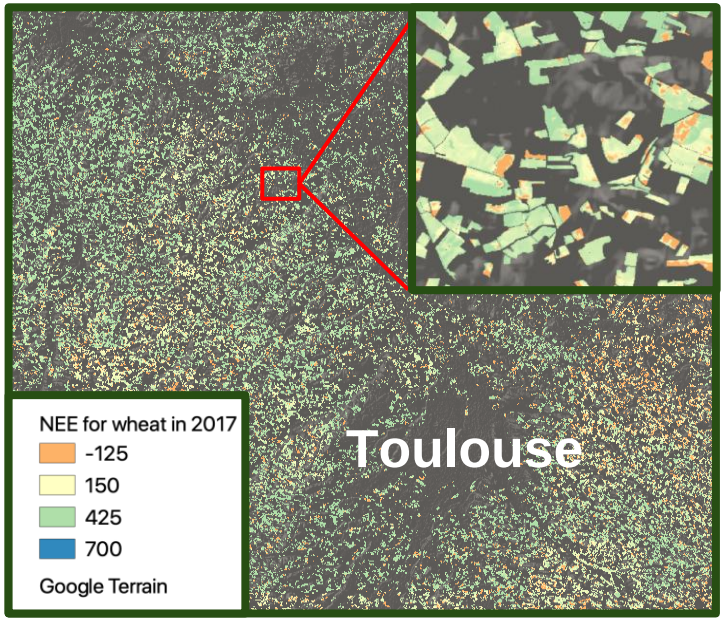
Application: carbon budgets over a sentinel2 tile

10m resolution map of straw cereal Net annual CO2 fluxes:
T31TCJ Sentinel2 tile (110 x 110 km)

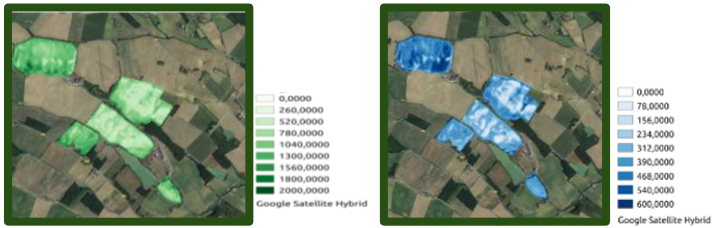


Application: carbon budgets over a sentinel2 tile

Large scale 10m resolution map over the T31TCJ Sentinel2 tile (110 x 110 km)



Net annual CO2 flux (gC-CO2/m2/yr)

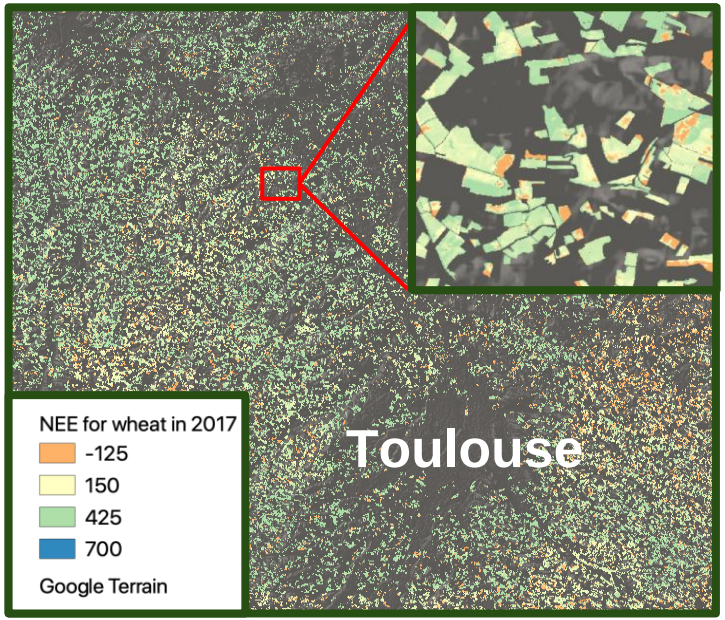


Average **Standard deviation**

Cover crop biomass estimations

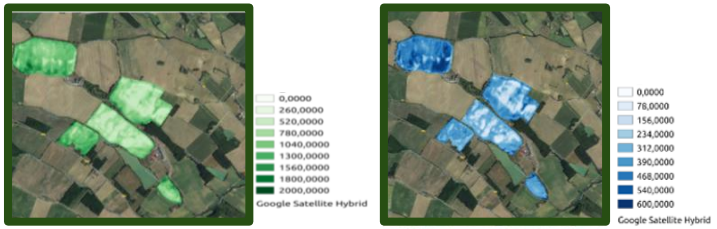
Application: carbon budgets over a sentinel2 tile

Large scale 10m resolution map over the T31TCJ Sentinel2 tile (110 x 110 km)



Net annual CO2 flux (gC-CO2/m2/yr)

Farmer data
(C imports/exports)



Average **Standard deviation**

Cover crop biomass estimations

High resolution carbon budgets map.

Conclusions:

Agricarbon EO:

- ➢ Monitor Carbon budget components
- ➢ Large scale & intra field resolution
- ➢ Local growth variability
- ➢ Quality assessments

MRV compatible demonstrator

- ➢ Streamline the access to farmer data (Agdatahub)
- ➢ Introduce SOC model
- ➢ Assimilate other remote sensing products.
