Submitted on 10 Oct 2023

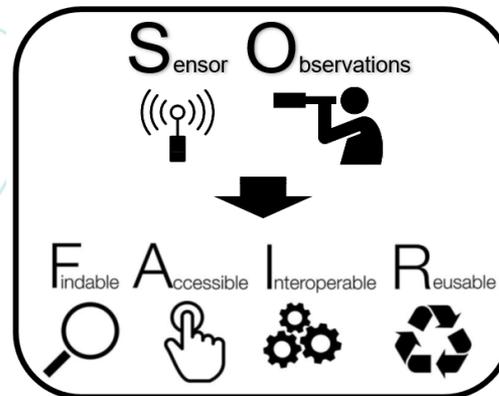

**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# SO FAIR - A generic tool for publishing observation data within an ecosystem of interoperable services

2nd TERENO-OZCAR Conference 2023

28 september 2023

Herve Squividant, Mario Adam, Mikael Faucheux, Ophelie Fovet, Christophe Geneste, Tom Loree, Thierry Morvan, Laurent Ruiz & Zahra Thomas.

## > Context

- Maturity of FAIRisation of geographic data
  - 2000: OGC W\*S standards
  - 2007: INSPIRE directive
  - 2009 : SDI
  - 2010 →... : Platforms + communities + ...
  - ... birth of the spatial open data ecosystem
- Late start for the "liberation" of temporal data
  - 2006: Standard SOS "orphaned by its WMS"
  - 2015: New OGC SensorThings standard
  - 2016: FROST Server
  - 2021 : SensorThings as input of Theia/OZCAR IS
- Complexity of configuring a temporal open data service
- Compartmentalization between FAIR services for "geographic" AND "temporal" data

## ➤ Question

How to **publish** temporal datas **simply** and **integrate** them into an ecosystem of pre-existing services ?

## > Our answer

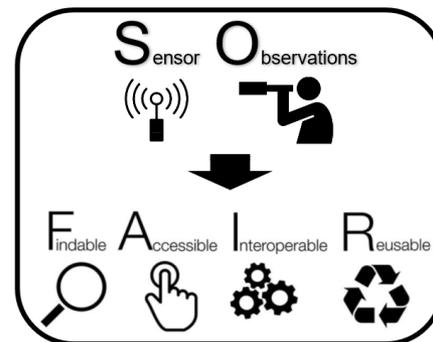

By initiating an internal working group with a mix of different skill profiles : metrologist, scientist, FAIR data scientist, API developer, service deployer / infrastructure manager, ...

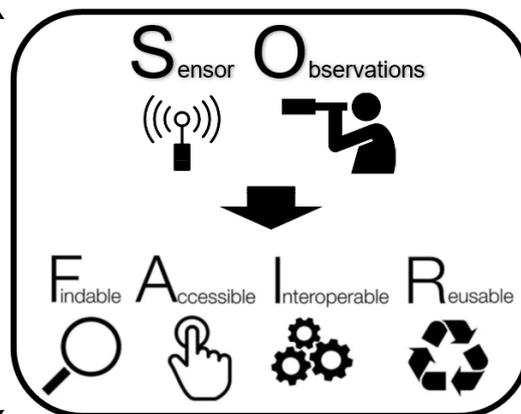

To work together to define a methodological, technical and human chain for routing data from the sensor to the ecosystem of FAIR data services based on subsidiarity as we made before with INSPIRE SDI and geographical data sharing.

The project SO FAIR -> Sensor Observations to FAIR data

# SO FAIR middleware service

# SO FAIR API service

<https://geosas.fr/sofair-dev/api>

1 Creating a SensorThings service  
→ `api.geosas.fr/<MyInstance>/v1.0`

2 Configuring a SensorThings service

- Things
- Sensors
- ObservedProperties
- Thesaurii
- ...

3 Feeding datas to service

- Automatic : Lora, ...
- Semi-automatic : Outputs from proprietary software
- Manual : upload CSV
- ...

4 Connection to the service ecosystem

- Automated generation of INSPIRE metadata and OGC layers in SDI
- Dataverse Metadata

5 Automated generation of web-based tools for viewing and downloading time series, with or without spatial inputs.

# ➤ SO FAIR API Service

## ➤ New standard

## ➤ A python implementation of the OGC API

## ➤ deployed in a beta version

<https://geosas.fr/sofair-dev/api/>

A screenshot of a web browser showing the "Processes in this service" page on GeosAS.fr. The browser address bar shows "https://geosas.fr/sofair-dev/api/processes?f=html". The page header includes the GeosAS.fr logo and a breadcrumb "Home / Processes". The main content is a table with two columns: "Name" and "Description". The first row, "SensorThings API creation", is highlighted with a yellow border and a yellow circle containing the number "1".

Name	Description
<a href="#">SensorThings API creation</a>	This function allows you to create a new instance of a SensorThings service that is immediately accessible online.
<a href="#">Setting up the sensorthings service</a>	This function uploads an XLSX file to create the various objects in the SensorThings service: Things, Sensors, Observed Properties, Locations, Features Of Interest and Datastreams.
<a href="#">Upload observations</a>	This function uploads observations from CSV or XLSX file to the SensorThings service.
<a href="#">Publishes a SensorThings service in an IDG</a>	This process publishes INPIRE-compliant layer and metadata from a SensorThings service to a Spatial Data Infrastructure.
<a href="#">Create SensorThings geographic portal</a>	This function automatically generates a URL pointing to a map portal displaying chronicles of observations from the SensorThings service provided.

# ➤ From environmental observatory to SensorThings Model

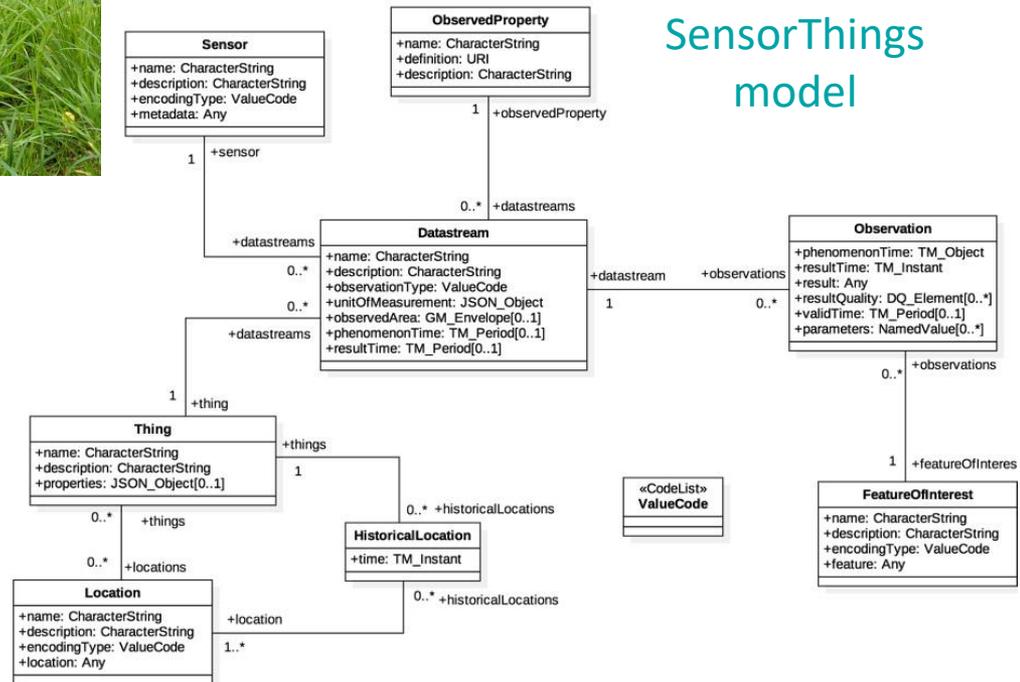

Reality in the field

How ?

Information system

## SensorThings model

# Iterative teamwork

## Scientists

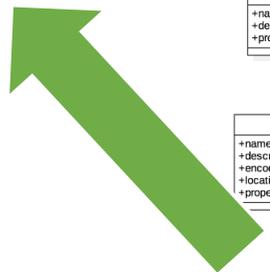

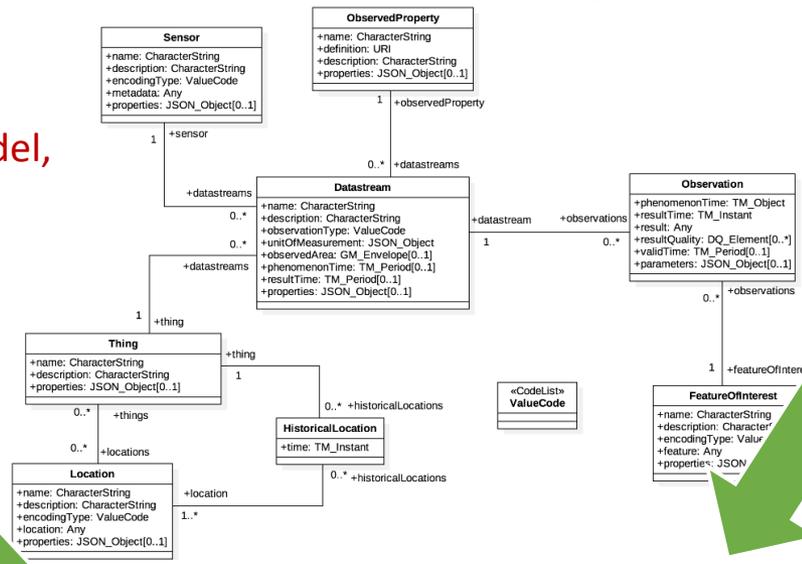

- Need to understand the model,
- Involvement in the choice of concepts and thesaurus definitions.

## Metrologist, sensor installer

- Need to understand the model,
- Knowledge of observatory site, sensors, observed properties and data path.

## Sensorthings model

## FAIR data scientist

- Good knowledge of the model, services & tools,
- Facilitating role to extract knowledge from the scientist and the metrologist.

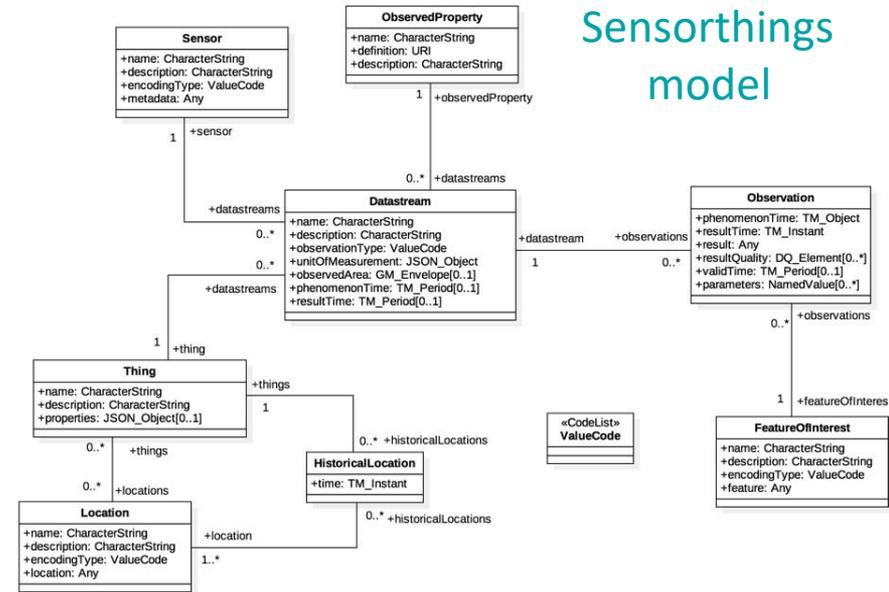

# Example Of AgrHyS Observatory in Brittany

Microsoft Excel interface showing a spreadsheet titled 'aghys\_sensorthings\_v5.xlsx'. The spreadsheet contains a table with columns: name, observationType, description, unitOfMeasurement.name, unitOfMeasurement.symbol, and unitOfMeasurement.definition. A green arrow points from the table to the Sensorthings model diagram.

name	observationType	description	unitOfMeasurement.name	unitOfMeasurement.symbol	unitOfMeasurement.definition

# Upload observations in SensorThings API

3

The screenshot shows the 'Admin So FAIR' interface for 'Alimentation en données'. The page title is 'Admin / Alimentation en données' and it includes a 'GitHub' button. There are tabs for 'Excel/CSV', 'Bdd/Postgres', 'API', and 'Logiciel propriétaire'. The main heading is 'Transfert de données via un fichier Excel'. Below this, a paragraph explains that users can feed their API with data by importing an XLSX file, with examples available for download. The interface is divided into two main sections: 'Transfert de données' and 'Exemples'.

# ➤ Dynamic creation of a cartographic web portal

- Automatic URL generation

e.g. : <https://geosas.fr/mviewer-dev/?config=/apps/efele/config2.xml>

- co-visualization of spatial data / temporal data

# SO FAIR Portal

## Dashboard of deployed ST services

The screenshot displays the SO FAIR Portal dashboard. At the top, there is a search bar and a user profile for 'Trifon Ivanov'. The main dashboard area features three summary cards: 'Instances' (14), 'Propriétés observées' (229), and 'Données' (156 029 029). Below these is a section for 'Services SensorThings' with a search icon. The services are organized into a grid of cards, each representing a different service with its name, description, API URL, and status indicators for Configuration, Données, Métadonnées, and Viewer.

Service Name	Description	API URL	Configuration	Données	Métadonnées	Viewer
agrhyS	ORE AgrHyS	<a href="https://api.geosass.fr/agrhyS/v1.0/">https://api.geosass.fr/agrhyS/v1.0/</a>	OK	OK	OK	OK
batelev	Bâtiment d'élevage	<a href="https://api.geosass.fr/batelev/v1.0/">https://api.geosass.fr/batelev/v1.0/</a>	OK	OK	OK	OK
rennesmetro	Capteurs Lora Rennes Métropole	<a href="https://api.geosass.fr/rennesmetro/v1.0/">https://api.geosass.fr/rennesmetro/v1.0/</a>	OK	OK	OK	OK
agri4cast	Archives météo Agri4cast	<a href="https://api.geosass.fr/agri4cast/v1.0/">https://api.geosass.fr/agri4cast/v1.0/</a>	OK	OK	OK	OK
safran	Archives météo France SAFRAN	<a href="https://api.geosass.fr/safran/v1.0/">https://api.geosass.fr/safran/v1.0/</a>	OK	OK	OK	OK
selune	Observatoire Sélune	<a href="https://api.geosass.fr/selune/v1.0/">https://api.geosass.fr/selune/v1.0/</a>	OK	OK	OK	OK
