HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Setting the scene for carbon farming: best practices and challenges:

Developping C farming schemes in a soil health perspective

EIP SOIL has received funding from the European Union's Horizon 2020 research and innovation programme; Grant agreement No 862695

Why ? Soil organic matter is key to soil quality and soil health

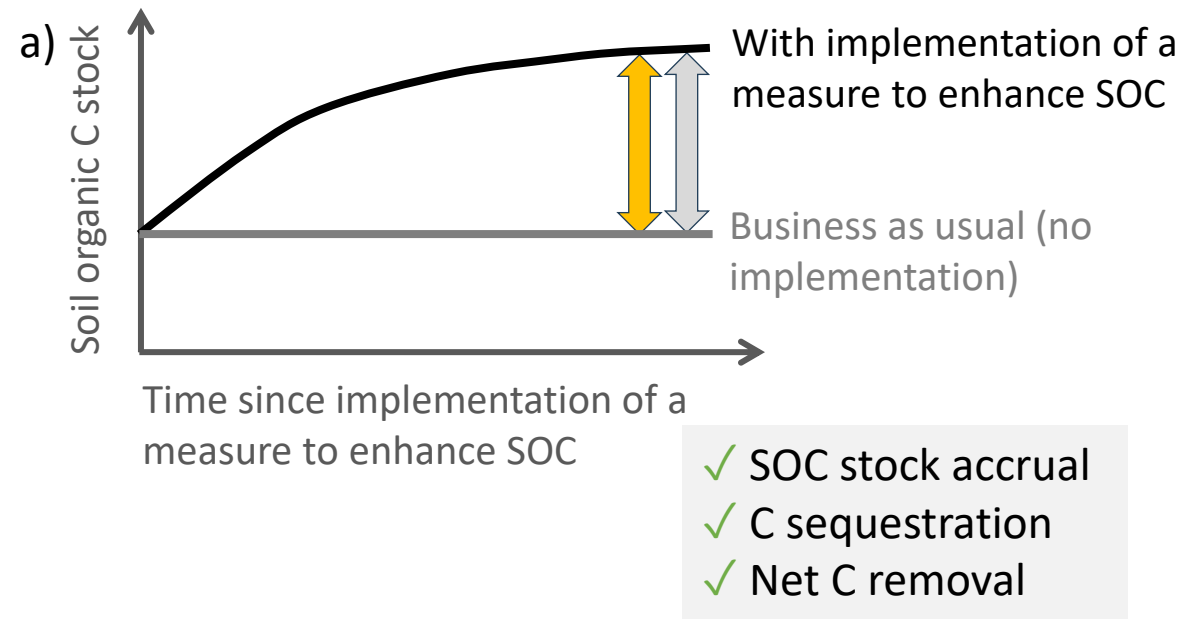

What does it mean? A wider perspective than soil C

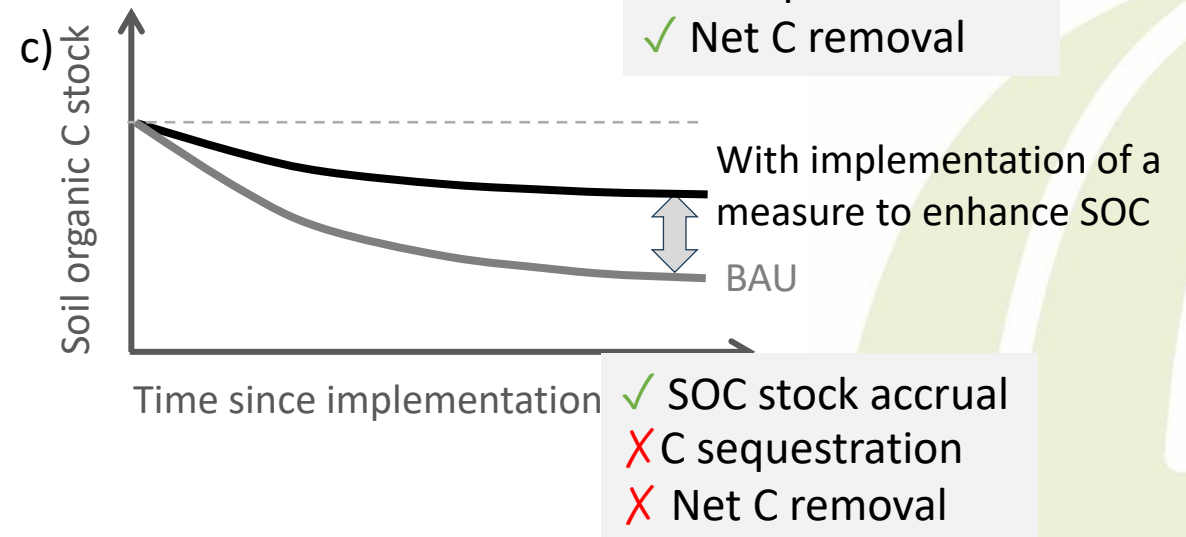

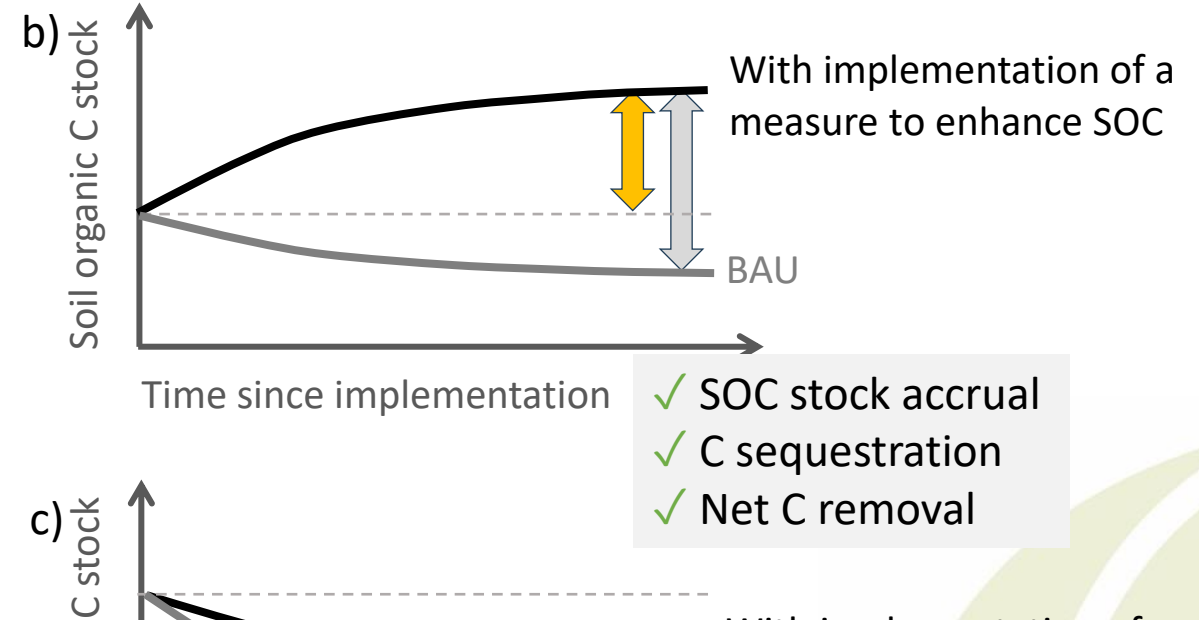

Accounting for synergies and trade-offs

Expected outcome?

More Soil Organic Carbon for GHG mitigation & for soil health improvement

↕ SOC stock accrual ↕ C sequestration in soil

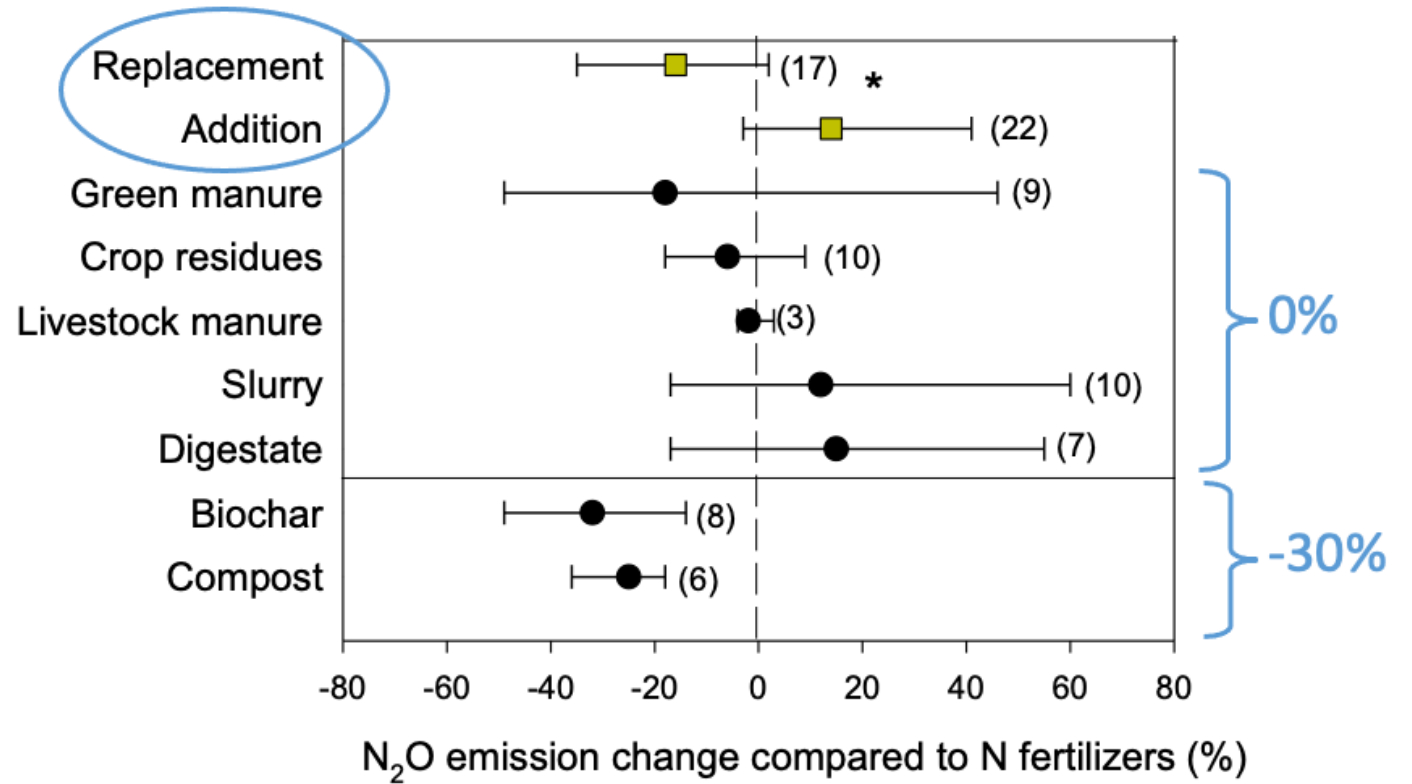

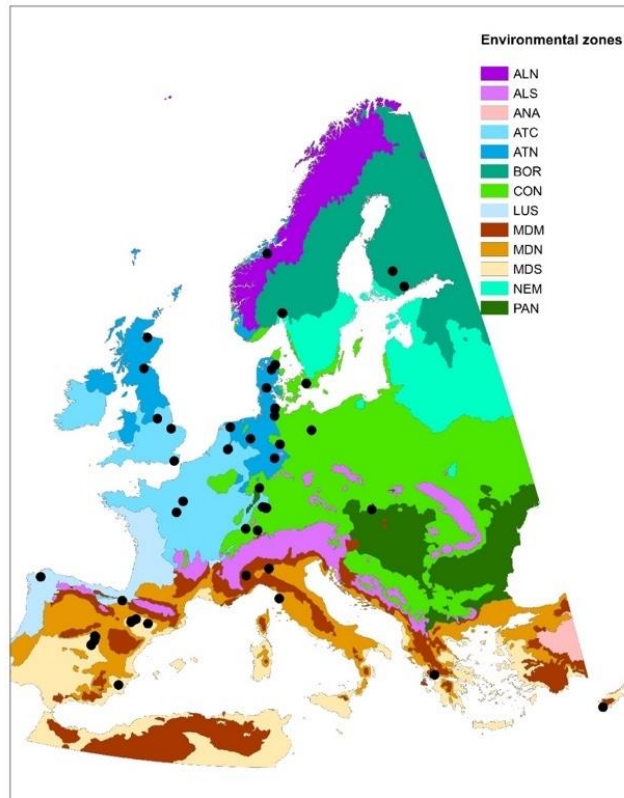

Expected outcome: C sequestration or only C loss mitigation?

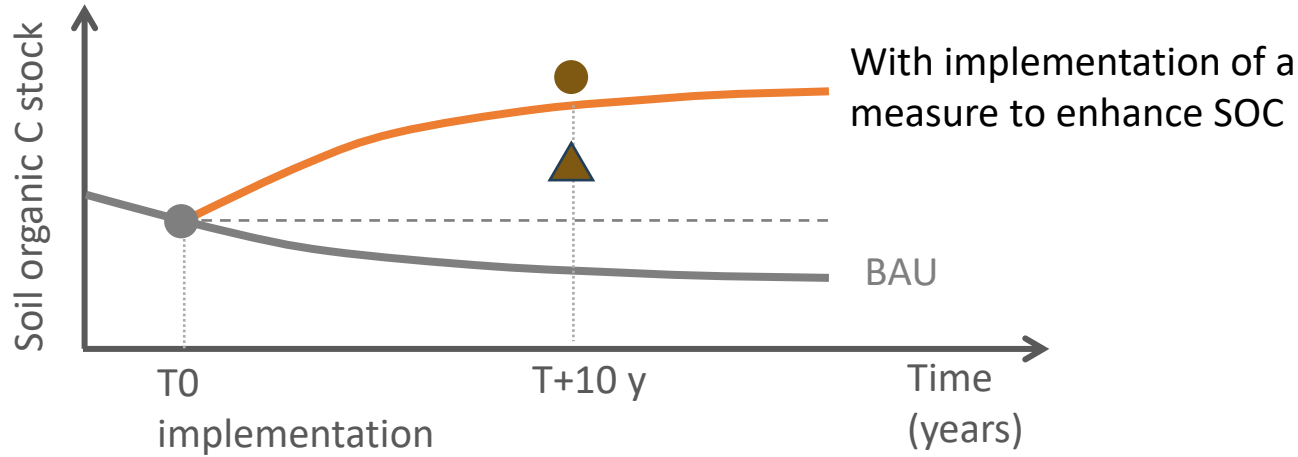

Trade-offs ?

N₂O emissions

Organic amendments vs mineral fertilizers

Measuring, reporting and verifying

Modelling to predict
Measuring to verify

Conclusion: developing C farming in a soil health perspective?

Desirable, challenging, possible

The way forward : combining at best

Knowledge on the effect of (practices x pedoclimatic conditions) on SOC, GHG, ecosystem services

Modelling to predict SOC, GHG, ecosystem services

Measuring SOC, GHG, soil health indicators
