Descriptive sensory analysis

ABSTRACT

It is well known that perception of food and drink is a temporal phenomenon. And it is under this premise that several temporal methods have been developed in the past 50 years trying to capture, describe and quantify these sensory changes occurring during food tasting.

More than one hand is needed to count the amount of multi-attribute temporal methods which have been developed since 1994, when the Progressive Profile was first published. From one bite to a whole portion, these methods have been used to evaluate product qualities, consumer behavior and food oral processing, among other challenges. But sometimes it seems that methods are developed faster than they can be validated.

In this presentation 363 research articles (from 1991 to 2022) using temporal descriptive methods were analyzed according to a previously validated protocol. A quantitative and qualitative synthesis of the results allowed the identification of trends in how methods were developed, refined, and disseminated. Some critical research gaps in establishing the validity and reliability of the methods were identified and discussed. Results suggest the need for general guidelines on how to implement the method, analyze and interpret data, and report the results.

CRediT authorship contribution statement

M.V. Galmarini: Writing – review & editing, Writing – original draft, Visualization, Validation, Methodology, Investigation, Formal analysis, Data curation, Conceptualization. **M. Visalli:** Validation, Methodology, Investigation, Formal analysis, Data curation.

Data availability

Data will be made available on request.

Acknowledgments

We would like to thank the Pangborn Scientific Committee for giving us the opportunity for presenting this content in the 2023 edition of the symposium.

Funding

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Declaration of interests

The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

Mara Galmarini is an associate professor of Sensory and Consumer Science at several top-rated universities in Buenos Aires, Argentina (Pontificia Universidad Católica Argentina, UCA; Universidad de San Andres, UdeSA; Universidad Torcuato Di Tella, UTDT) and a tenured researcher at CONICET (Consejo Nacional de Investigaciones Científicas y Tecnológicas). She has a degree in Food Science (UCA), a PhD from the Universidad de Buenos Aires and is a Marie-Curie alumna. She has published numerous publications in top academic journals as well as book chapters. As an academic researcher, she has worked in different universities (ESA, ISA, ISARA, UPeU) and sensory research centers (Centre des Sciences du Goût et l'Alimentation, Dijon, France). In the field of sensory science research, Mara has focused particularly on temporal descriptive methods, food pairing and on cross-modal studies.
