HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Modelling climate change adaptations of pastoral farming systems

Mediterranean context : agropastoral livestock farming systems specificities heterogeneity of animals, diversity in land use and flock mobility

→ more particularly affected by climate change

To design efficient & resilient LFS → it is necessary to be able to design strategies in **anticipation** and to **consider the agropastoral specificities**

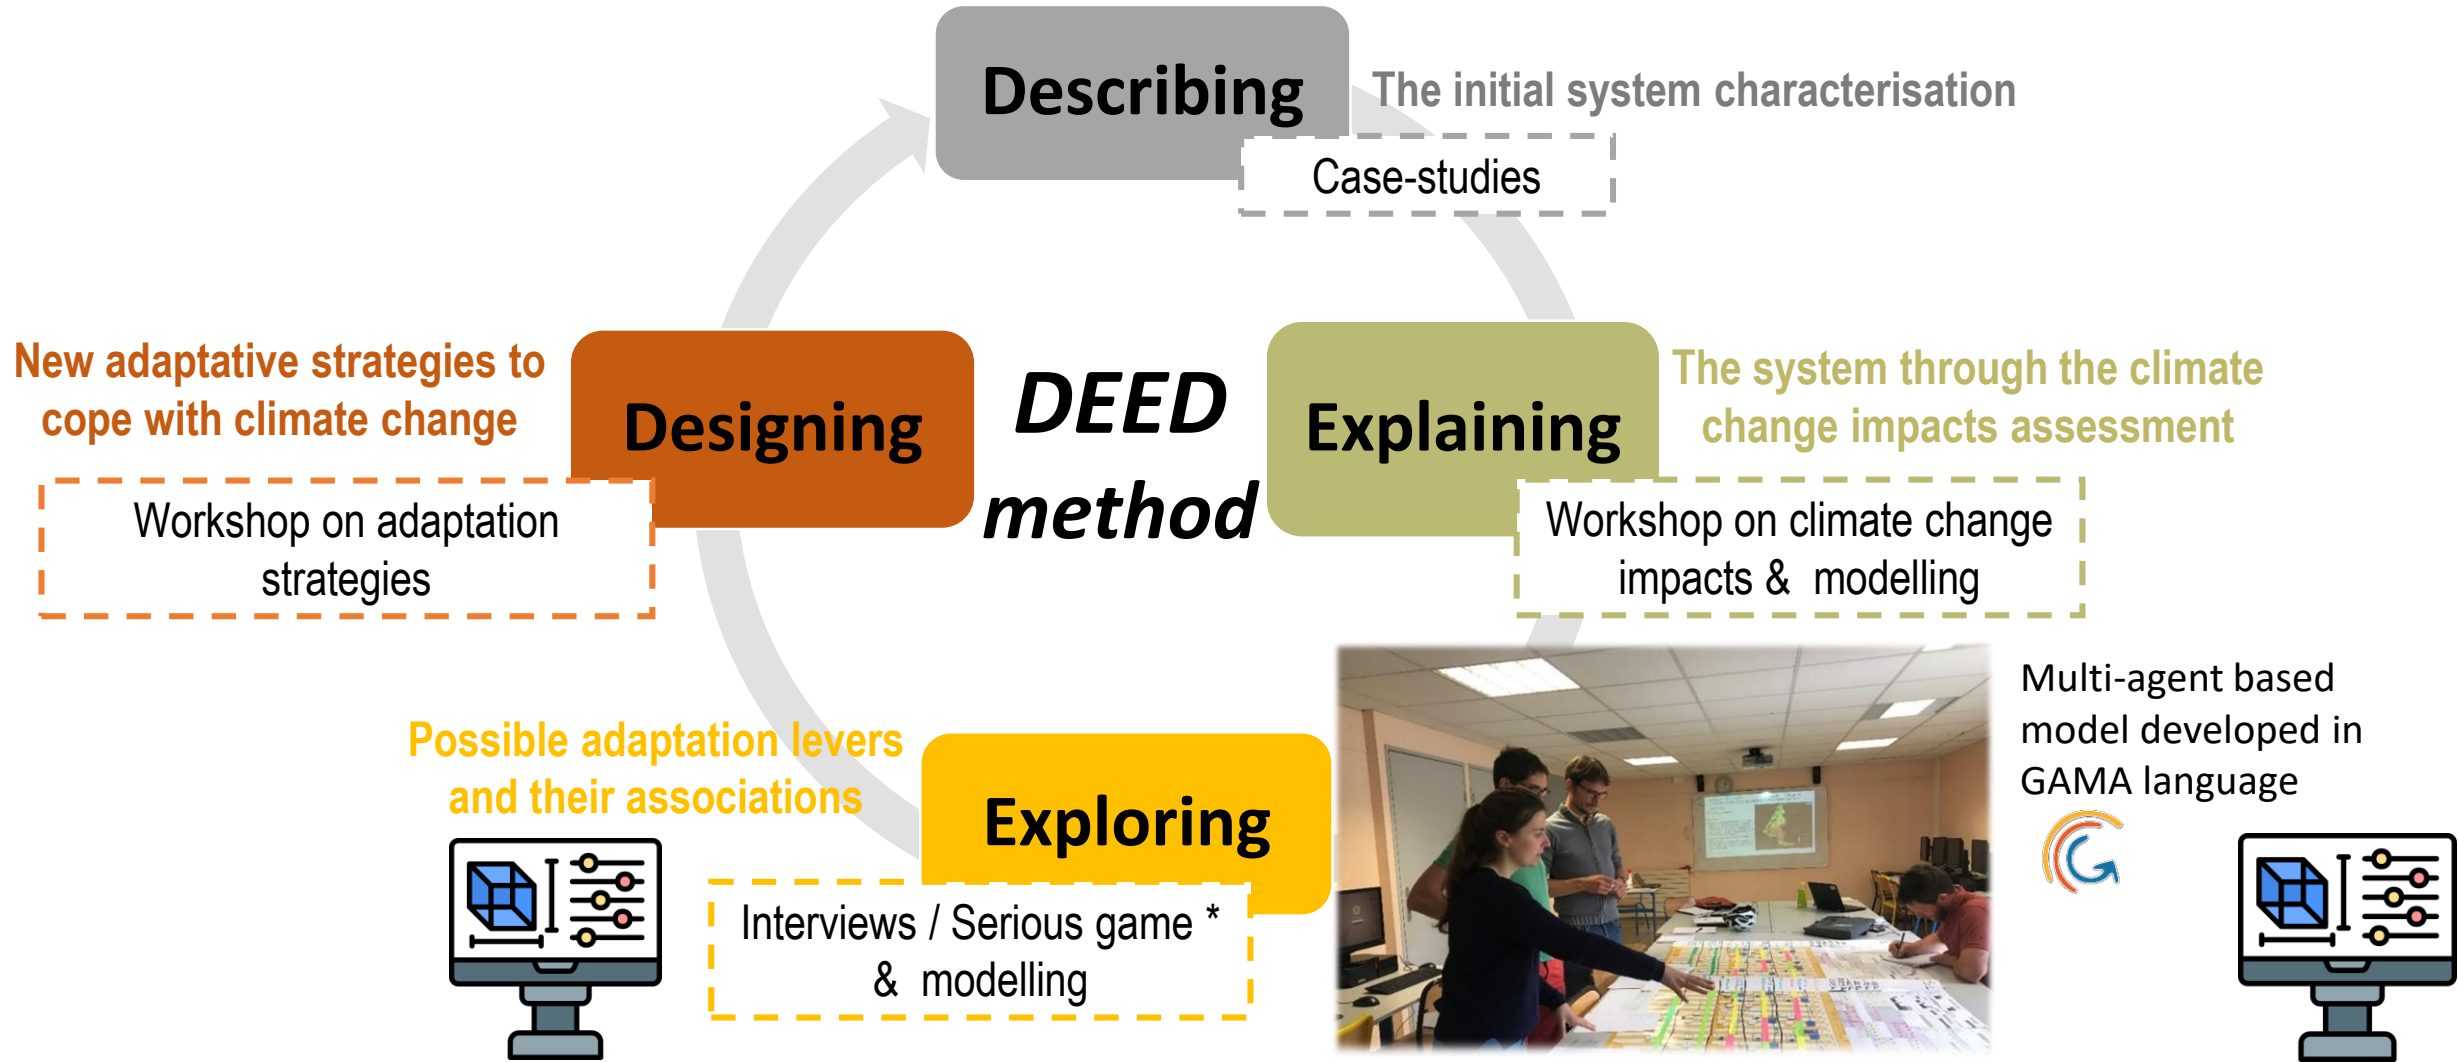

Modelling as a tool to describe, to understand impacts and to design adaptations strategies

The objective is therefore to evaluating the multi-level implications of adaptation levers on the expected performances with regard to the issues of CC

Method combining focus group & modelling

*Rangeland Rummy –
A board game to support adaptive management
of rangeland-based livestock systems (Farrié et al., 2014)*
