Angers

As the result of the increasing demand for meat and milk at a global scale, livestock farming faces strong pressures to alleviate its negative impacts on the environment

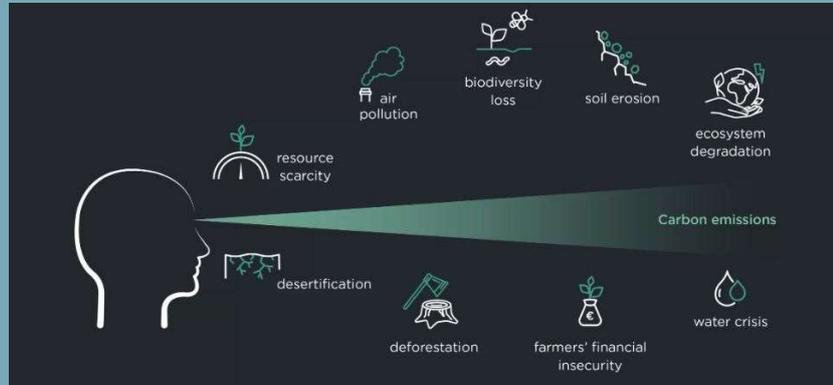

APS deliver a number of benefits to society (biodiversity), and have positive feedbacks on cropland production (manure)

→ Need to account for both impacts and services

B. Dumont - The multiple values of European grass-based farms along pedoclimatic and stocking density gradients, 19 April 2024 - Montpellier

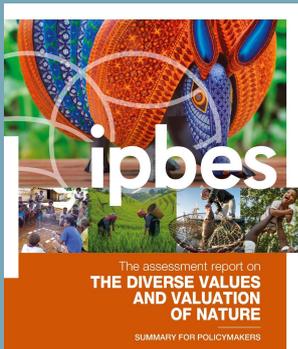

Reducing carbon emissions is undeniably important. But becoming overly fixated on this one metric can lead to carbon tunnel vision — in which organizations become overly fixated on one goal

➔ Need to account for multiple dimensions

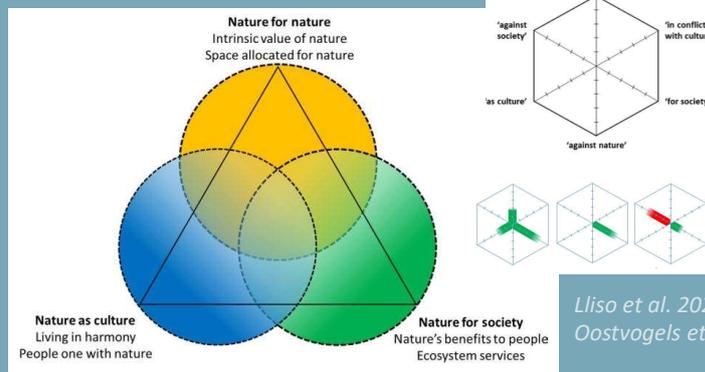

B. Dumont - The multiple values of European grass-based farms along pedoclimatic and stocking density gradients, 19 April 2024 - Montpellier

Diverse understandings of the relations between humans and biodiversity/nature

The Nature Futures Framework (Pascual et al. 2017) analyse the plural value dimensions of human-nature interactions

Check for updates

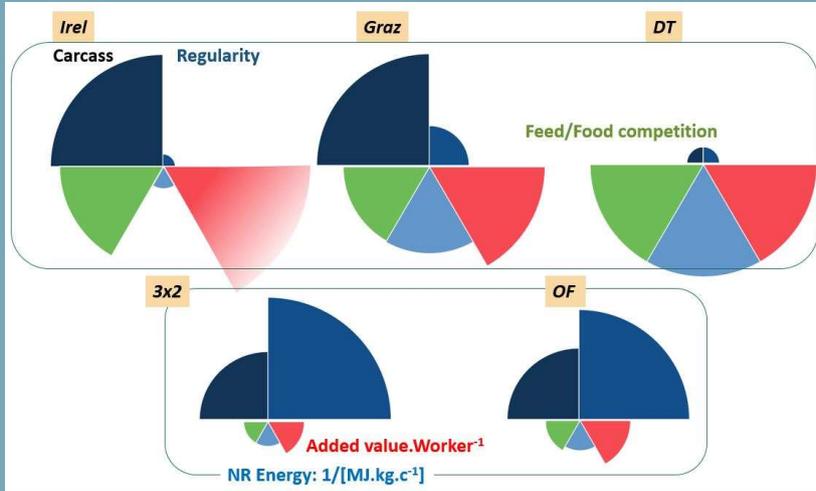

Performance assessed through 2 key variables

- ✓ Concentrate feeds / ewe.yr (64% of costs)
- ✓ Ewe annual productivity (correlated with net income)

➔ Rangelands, vineyard inter-rows

B. Dumont - The multiple values of European grass-based farms along pedoclimatic and stocking density gradients, 19 April 2024 - Montpellier

### Five synthetic indicators to assess overall performance

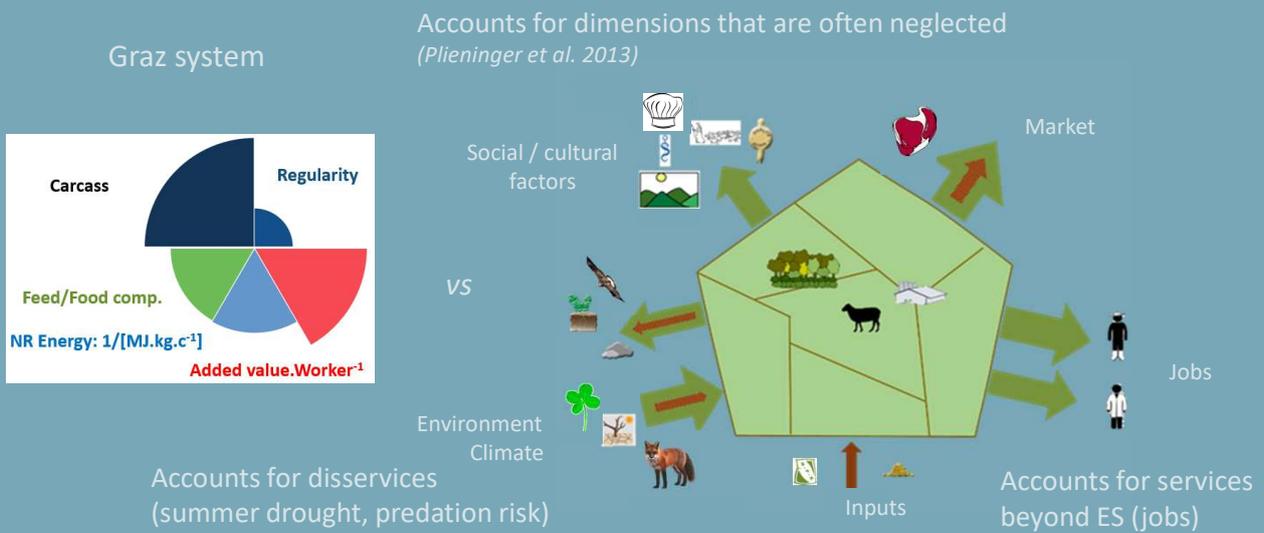

- Grassland-based farms had the best economic and environmental performance, while limiting feed-food competition
- Optimizing economic and environmental performance doesn't fit with meat industry demand for a regular production

*Benoit et al. 2019*

B. Dumont - The multiple values of European grass-based farms along pedoclimatic and stocking density gradients, 19 April 2024 - Montpellier

### An integrated graphical approaches for explicitly representing the whole range of services and impacts *(Ryschawy et al. 2019)*

B. Dumont - The multiple values of European grass-based farms along pedoclimatic and stocking density gradients, 19 April 2024 - Montpellier

The framework was developed as a serious game to facilitate dialogue on APS

- Representing the current situation, then a sustainable future for the area
- Each player responsible for one interface
- Participants share their knowledge and collectively exercise their analytical skills by learning to position their own vision relative to that of others
- A safe environment to express contrasted and sometimes antagonist perceptions and values among players (*Dernat et al. 2022, 2023*)
- We reach out people who are traditionally excluded from scientific knowledge (*Sterling et al. 2017*)

B. Dumont - The multiple values of European grass-based farms along pedoclimatic and stocking density gradients, 19 April 2024 - Montpellier

## Take home messages

- Monocriteria assessments only reveal a small part of the story and do not help to think about a sustainable future for APS
- Valuing impacts and services from contrasting human perspectives (contrasts in farmer narratives in groups that may be perceived as homogeneous)
- Tools for participants to share their knowledge and values, and collectively exercise their analytical skills
