**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers. L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A landscape-scale approach to reducing pesticides: how can the analysis of local initiatives and dynamics support the design of territorial transformations?

Myrto PARMANTIER (INRAE, UMR Innovation)
Marc MORAINE (INRAE, UMR Innovation)
Lorène PROST (INRAE, UMR SADAPT)

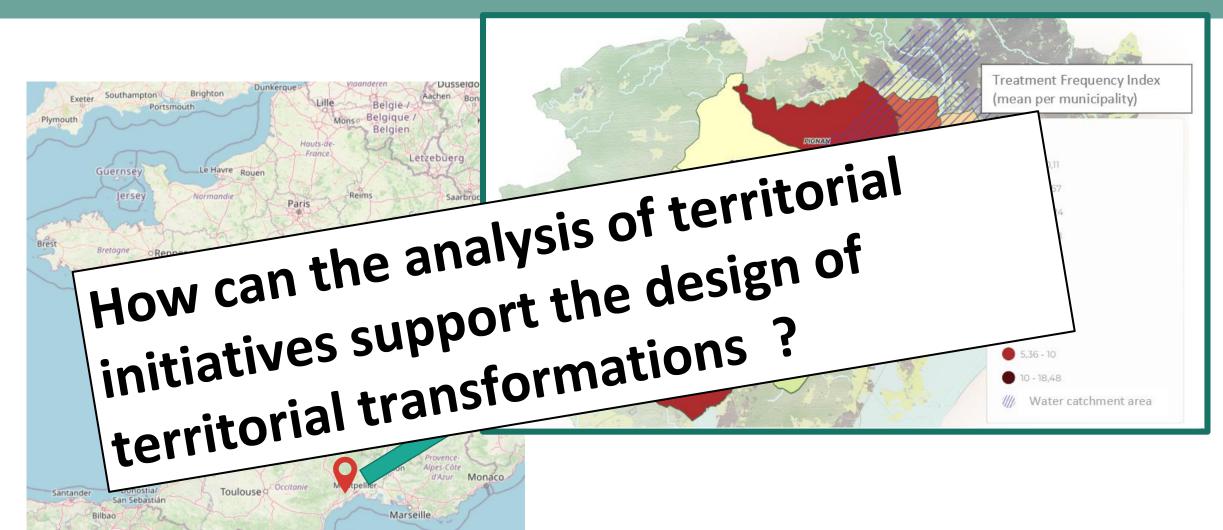

# Case study: The Western Plain of Montpellier, France

OpenStreetMap.org

### **Data collection**

- Semi structured interviews (18)
- Farm visits (5)
- Participation in workshops/meetings (7)
- Organisation of two workshops
- Reading of reports

## **Results validation**

Two presentations to local stakeholders

### **Conceptual frameworks**

### Crossing frameworks on landscape agronomy and collective action

Amblard et al., 2018 Material, organizational and symbolic dimensions of the territory enabling the emergence of pesticide reduction initiatives 1. Territorial determinants of collective action ALaDyn framework: resources, landscape patterns and farming 2. Configurations of collective action practices (Benoit et al., 2012) 3. How does collective action contribute to the territory's development? Potential contribution of local initiatives to pesticide reduction at the territory level

#### Territorial determinants of collective action

#### Material

Proximity to two cities

Multiple challenges faced by the territory: infrastructure projects, climate change

#### **Organizational**

Public structures eager to support initiatives

Local distribution channels impacting the organization of agricultural actors Strong presence of **associative actors** (naturalists, protection of nature)

### Symbolic

Different senses of belonging to the territory: administrative territories

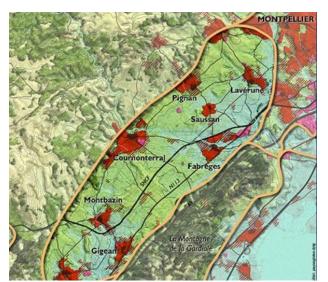

Multiple use: hunting, hiking, rave-parties, pastoralism, renewable energy...

Landscape mosaic

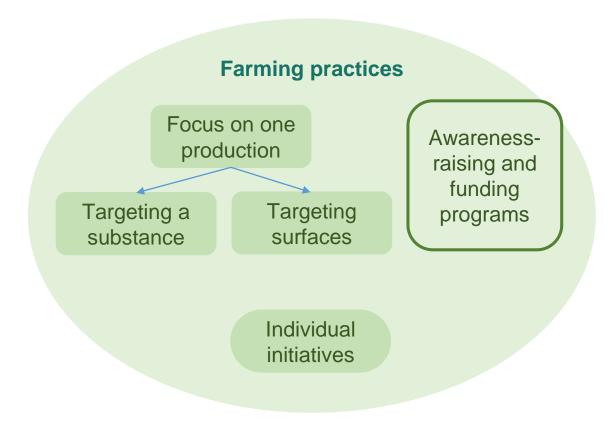

Strong winegrowing identity: village festivals, designations of origin...

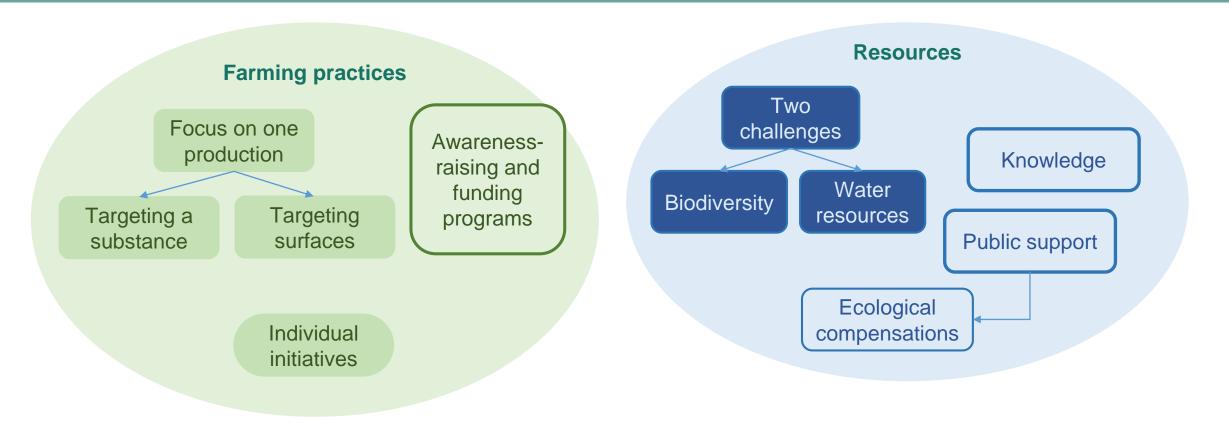

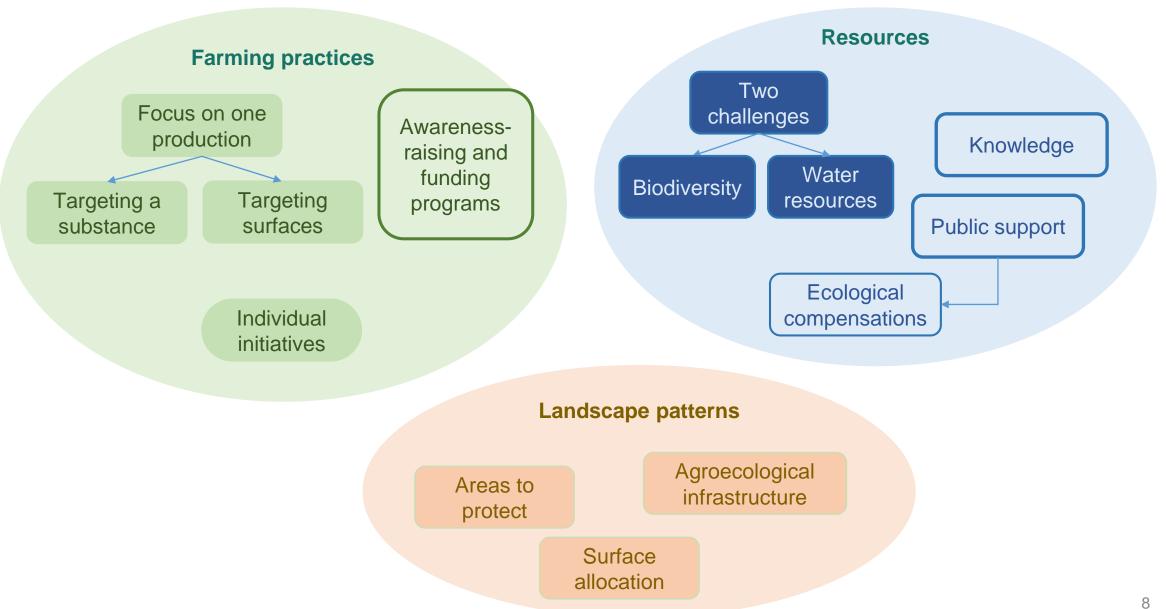

## Impact of initiatives on farming practices, resources and landscape patterns

### Impact of initiatives on farming practices, resources and landscape patterns

## Impact of initiatives on farming practices, resources and landscape patterns

### Contribution of initiatives to pesticide reduction at the territorial level

# **Different strategies Targeting impact on Targeting impact on** surfaces (certifications) holistic but very local pesticide reduction Valorization of production **Valorization of product** VS (practice implementation) (price) **Indirect impact on** Direct pesticide reduction

#### Limits

- Targeting of specific productions
- Competition between initiatives for financial support from public structures
- Mobilization of farmers
- « Parallel » networks of innovative initiatives

### **Practical implications**

- An opportunity for local stakeholders
- A way to better navigate into what is done on the territory?
- A clearer view of the territory's diversity?
- A starting point for the design phase
   Identification of what is already done and its potential
   Identification of three pesticide reduction scenarios to explore with local stakeholders

### Theoretical implications

- An(other) invitation to reflect on ways to analyse and support transformations at the territory level
- An empirical application of landscape agronomy
- A method to initiate territorial design?
- Identification of conditions for activation systemic levers to territorial transitions
